It is always intriguing to hear or read what the thought process was of a particular image you like. Thus, here is my take on

a group of photos I think photographers can use to learn a new technique, camera setting or mind-set for creating great images. Every picture does have a story behind it and that story along with the technical considerations to get what was desired can lead to others possibly being able to move forward with their own photographic endeavors. I myself learn more when I see an example of how to do something. As photographers, we are

visual in nature and when putting the seeing alongside the how, why, and what circumstance can lead to an aha moment where you can then say “I get it. I want to go and try that for myself.” Highlights include: • Cloud Stacking • Star Trails • Fall Abstracts • Birds in Flight • Sunrise / Sunset tips and tricks • Subject position • Foreground / Background flow

A lot has changed since I wrote and published this first volume of what became this guide series. One thing hasn't. I still have the same enthusiasm and joy in photography I had way back at the beginning of the series. I have a lot more

knowledge and experience now and, occasionally even get close to taking good photographs. That's the thing, see. I didn't know a lot when I originally wrote this guide. I had been working in photography since 1982 professionally. Everything I knew, pretty much, was self-taught. In general, that's still true. There's no need for you to do it all by yourself, too, though. This book and this series are meant to help you get going with the basics fast. Yes, OK, I tend to relate my own experiences, but that, too, is meant to help you avoid some

basic mistakes I made. And, perhaps, I write in a tad too friendly manner, but think of it as sitting down with me to have a friendly talk about a passion we share: Photography! Photography: Going Film Pro I: Revisiting the Nikon F4 Lulu.com
