Good lighting is everything in portraiture. The right light sculpts our subjects, smooths the skin, evens skin tones, and helps create the feeling of a third dimension in a two-dimensional image. The gold standard of lighting has, for the better part of a century, been produced by artificial lights (hot lights or strobes) in the studio. These sources allow for precise lighting effects on demand. However, artificial light cannot match the beauty or ambience that gorgeous natural light creates--and studio lighting can break the bank. In part 1 of this book, Carl Caylor introduces readers to a failproof method for understanding, shaping, and harnessing natural light for dazzling results that rival studio-lighting looks. Using your powers of observation, an understanding of the physics of light, and employing a couple of inexpensive tools (reflector panels to bounce light and a gobo to block light), Caylor shows you how to make the most of the sunlight for indoor and outdoor location shoots--and even studio work. You'll learn how to tweak the direction of light and manipulate lighting angles to re-create classic portrait lighting styles--short

lighting, broad lighting, Rembrandt lighting, and more—that flatter and contour your subjects’ facial structures to make them look their very best. In part 2 of the book, Carl provides an in-depth analysis into the techniques he used to create 60 beautiful natural-light portraits in myriad locations and circumstances, producing a wide range of portrait looks. Readers will learn how to integrate other elements that are important to building an effective portrait—including prop selection, wardrobe, composition, expression, posing, and even planning for a top-notch, contrasty black & white shot. The text in this book, along with inspirational images, will coax many readers to enjoy a “back to basics” approach that will allow them to produce technically exquisite and profoundly artful, flattering portraits that will sell themselves to clients every time.

Art Wolfe’s immersive photos capture the wonder humans have felt about trees for millennia. From the ancient Assyrian Tree of Life to the Iroquois peoples’ Tree of Peace, trees have played an archetypal role in human culture and spirituality since time immemorial. An integral part of a variety of faiths—from Buddhism and Hinduism to Nordic and aboriginal religions—trees were venerated long before any written historical records existed. This sense of reverence and wonder is beautifully evoked in these vivid images from legendary photographer Art Wolfe. The new, giftable format of his celebrated book on the topic, *Trees*, focuses on both individual specimens and entire forests, offering a sweeping yet intimate look at an arboreal world that spans six continents. To accompany these timeless images, author Gregory McNamee weaves a diverse and global account of the myths, cultures, and traditions that convey the long-standing symbiosis between trees and humans, and renowned ethnobotanist Wade Davis anchors the text with a penetrating introduction. Humans have always shared this planet with trees, and this book is both a breathtaking journey through and an homage to that relationship and its past, present, and future—now in a new, beautiful, and highly giftable format.

When Canon entered the digital professional photography market, the Powers That Be decided they would compromise between the smaller sensor that Nikon used and the full-frame sensor Kodak was using for its short-lived pro DSLR line. The Canon EOS 1D definitely was a success and still is sought after, The designers at Canon, though, couldn't seem to let go of the full-frame sensor idea. Scarcely a year after the 1D, the company released the Canon EOS 1Ds in late 2002. And it was/is a fantastic pro camera. Around two years later, the Canon EOS 1Ds Mark II hit the

shelves and it was just that much better. Both cameras still are viable options at low cost for using a pro DSLR camera. They're a lot of fun, too.
