A groundbreaking guide to flower flies in North America This is the first comprehensive field guide to the flower flies (also known as hover flies) of northeastern North America. Flower flies are, along with bees, our most important pollinators. Found in a varied range of habitats, from backyard gardens to aquatic ecosystems, these flies are often overlooked because many of their species mimic bees or wasps. Despite this, many species are distinctive and even subtly differentiated species can be accurately identified. This handy and informative guide teaches you how. With more than 3,000 color photographs and 400 maps, this guide covers all 416 species of flower flies that occur north of Tennessee and east of the Dakotas, including the high Arctic and Greenland. Each species account provides information on size, identification, abundance, and flight time, along with notes on behavior, classification, hybridization, habitats, larvae, and more. Summarizing the current scientific understanding of our flower fly fauna, this is an indispensable resource for anyone, amateur naturalist or scientist, interested in discovering the beauty of these insects. • 3000+ color photos (field and museum shots) • Multiple images per species, with arrows highlighting key field marks • Grayscale images showing the actual size of the insect • Range maps for each species • Information on size, identification features, abundance, flight times, and more

An innovative approach that focuses on taking great pictures not the inner workings of the camera * * Goes beyond a tour of the camera's capabilities to teach you how to take great photos with your Canon 50D! * Beautiful images, clear design, friendly and knowledgeable voice. * Not a rehash of the confusing, textbook-style camera manual (like so much of the competition) Canon's new EOS 50D bridges the gap between the novice and the seasoned pro with a perfect combination of high-speed and quality. For anyone who has upgraded from their point-and-shoot or first DSLR to a Canon 50D and wants to get the best shots possible but isn't sure what to do next. There's the manual of course, as well as competing books, and while they all tell 50D owners, often in 400+ pages, what the camera can do, none of them shows them exactly how to use their camera to create great images! Canon 50D: From Snapshots to Great Shots has one goal: to teach 50D owners how to make great shots using their Canon camera. It teaches them how to use their 50D to create the type of photographs that inspired them to buy the camera in the first place. Everything in the book is in service of creating a great image. Starting with the top ten things they need to know about their camera, photographer Jeff Revell then carefully guides them through the Basic modes and into the Advanced modes of the camera. They'll get practical advice from a pro on which settings to use when, great shooting tips, and even end-of-chapter assignments that will allow 50D owners to immediately put to use all the great info in each chapter.

"Flight is the essence of birdness. I strive to illustrate the beauty and complexity of avian flight." -- Peter Cavanagh 100 Flying Birds: Photographing the Mechanics of Flight offers a vivid and varied glimpse into the world of birds. A white-tailed eagle plummeting through a Japanese sky, a brown pelican striking a silhouette against an Ecuadorian sunset, an Atlantic puffin carrying its fish dinner above the Scottish coast, or a keel-billed toucan gliding through a Costa Rican jungle canopy; readers will marvel at the splendor of birds in flight while learning the techniques to capture these gravity-defying moments from a world-class nature photographer. For each picture, author and photographer Peter Cavanagh shares his most evocative thoughts: the challenges of the shoot, the beauty of the location, and the curiosities of the species. Bird people will enjoy the bird photographs and facts, travelers will gobble up the tales of distant parts, and photographers will absorb the technical details. For instance, readers might be surprised to see that a very slow shutter speed can freeze the motion of hummingbird wings. Peter Cavanagh has collected 100 beautiful photos spanning a wide range of species. The subjects of each of the 11 chapters are: Eagles Hummingbirds Gulls and Terns Small Waterbirds Large Waterbirds Ducks, Geese and Swans Raptors Condors and Corvids Cranes Songbirds Favorites
