Contains a bibliographical survey of the chronological and systematic canonical collections in the Latin West from the beginnings of Christianity to Gratian's Decretum (ca. 1140). Dr. Kéry not only has compiled a catalogue of early medieval canonistic manuscripts, but has included valuable information about them. For each collection she has described its type and contents, the time and place of compilation, and, when, possible, its author. Full bibliographies have been provided for each collection, arranged in chronological order. Scholars will find her work particularly useful since she has also noted where scholars have differed and where their opinions may be found. Special attention has been paid to the numerous recensions of the collections. She has given a separate entry for important recensions and has lists of fragments and abbreviated forms of the collections.

Film cameras - the bodies themselves - have little to do with image quality. Lenses are far more important to image quality than camera bodies. So, as long as your camera has accurate shutter speeds, aperture settings and metering, the brand you pick doesn't really have much of an effect upon the final image. So, then, it appears the model camera you choose is irrelevant. Well, no. The type of film SLR camera you choose is most important to you as the photographer in features and convenience. Comfort has a lot to do with how good you are as a photographer. What I mean by that is that, you choose a camera that feels comfortable in your hands and becomes an extension of your brain as a photographer. This makes it easier to capture the types of images you want.

As novice master of the Cistercian Abbey of Our Lady of Gethsemani in Kentucky, Thomas Merton presented weekly conferences to familiarize his charges with the meaning and purpose of the vows they aspired to undertake. In this setting, he offered a thorough exposition of the theological, canonical, and above all spiritual dimensions of the vows. Merton set the vows firmly in the context of the anthropological, moral, soteriological, and ecclesial dimensions of human, Christian, and monastic life. He addressed such classical themes of Christian morality as the nature of the human person and his acts; the importance of justice in relation to the Passion of Christ, to friendship and to love; and self-surrender as the key to grace, prayer and the vowed life. Merton's words on these topics clearly spring from a committed heart and often flow with the soaring intensity of style that we have come to expect in his more enthusiastic prose. The texts of these conferences represent the longest and most systematically organized of any of numerous series of conferences that Merton presented during the decade of his mastership. They may be the most directly pastoral work Merton ever wrote.

Selected by the American Library Association's 'Choice' magazine as "best technical book", the first edition of this book soon established itself as the standard reference work on all aspects of photographic lenses and associated optical systems. This is unsurprising, as Sidney Ray provides a complete, comprehensive reference source for anyone wanting information on photographic lenses, from the student to the practitioner or specialist working with visual and digital media worldwide. This third edition has been fully revised and expanded to include the rapid progress in the last decade in optical technology and advances in relevant electronic and digital forms of imaging. Every chapter has been revised and expanded using new figures and photographs as appropriate, as well as extended bibliographies. New chapters include details of filters, measurements from images and the optical systems of digital cameras. Details of electronic and digital imaging have been integrated throughout. More information is given on topics such as aspherics, diffractive optics, ED glasses, image stabilization, optical technology, video projection and new types of lenses. A selection of the contents includes chapters on: optical theory, aberrations, auto focus, lens testing, depth of field, development of photographic lenses, general properties of lenses, wide-angle lenses,

telephoto lenses, video lenses, viewfinder systems, camera movements, projection systems and 3-D systems.
