This book looks at the link between voters and political party systems in Asian democracies, focusing on India, Indonesia, Korea and the Philippines. It discusses this link in terms of three distinct elements: the formation of voters preferences, the translation of preferences into votes, and the translation of votes into seats. The book goes on to discuss how far the general rules of political party systems and their underlying causal mechanisms such as strategic voting are apparent in these Asian democracies. In particular, it explores the extent to which electoral rules and social structural variables affect the process of transforming preferences into a political party system within the context of Asian politics. The extensive areas covered by the book overcome the traditional sub-regional division of Asia, namely, East, Southeast and South Asia.

Temperature plays a critical role in animal survival and climate warming is one of the greatest threats to global biodiversity in the future. It is already affecting species and communities with severe impacts and it is predicted that climate warming will cause species extinctions and distributional shifts in the coming decades. The impact of climate warming is expected to be particularly severe on ectothermic animals, including fishes, amphibians, and reptiles. Thus, assessing species' responses to ongoing climate warming and determining what conservation actions should be taken are among the most significant and controversial challenges for ecologists. Identifying the most vulnerable species to extinction as a result of climate warming is an appropriate first step in mitigating the impacts of a changing world. An organism's vulnerability to climate warming depends on its sensitivity to environmental changes, its exposure to the change, and its ability to recover from and potential to adapt to change. The interaction of these factors makes predicting the effects of climate warming on species a complex and major challenge for ecologists. Developing a deeper knowledge of ectotherms' vulnerability to climate warming is crucial to enhance our understanding of extinction processes and significantly contribute to conservation efforts by guiding the implementation of better policies and management strategies to prevent the extinction of remaining populations. Investigations of climate warming vulnerability are likely to benefit from measurements of environmental conditions taken at the scale at which organisms experience them. Therefore, the main objective of this interdisciplinary Research Topic is to bring together research on how ectotherms respond to climate warming at various levels. We will particularly focus on the life-history, energy strategy, physiological response, etc. We encourage inter- and multidisciplinary research approaches linking molecular biology, thermal physiology (and ecology), behavioral ecology, functional ecology, evolutionary genetics, and bioenergetics.

The first-ever collection of essays from across Elizabeth Hardwick's illustrious writing career, including works

not seen in print for decades. A New York Times Notable Book of 2017 Elizabeth Hardwick wrote during the golden age of the American literary essay. For Hardwick, the essay was an imaginative endeavor, a serious form, criticism worthy of the literature in question. In the essays collected here she covers civil rights demonstrations in the 1960s, describes places where she lived and locations she visited, and writes about the foundations of American literature—Melville, James, Wharton—and the changes in American fiction, though her reading is wide and international. She contemplates writers' lives—women writers, rebels, Americans abroad—and the literary afterlife of biographies, letters, and diaries. Selected and with an introduction by Darryl Pinckney, the *Collected Essays* gathers more than fifty essays for a fifty-year retrospective of Hardwick's work from 1953 to 2003. "For Hardwick," writes Pinckney, "the poetry and novels of America hold the nation's history." Here is an exhilarating chronicle of that history.

Georges Seurat (1859 – 1891) created just six major figure paintings during his lifetime, one of which, the alluring *Circus Sideshow* (*Parade de cirque*), has remained the most challenging to interpret since it first intrigued viewers at the 1888 Salon des Indépendants in Paris. Unlike Seurat's earlier sunlit scenes, *Circus Sideshow* presents a nighttime tableau depicting a parade—a street show enticing passersby to purchase tickets. With its geometrically precise composition, muted colors, and elements of abstraction, the painting stands apart as a masterpiece of Neo-Impressionism and heralds Seurat's subsequent depictions of popular entertainments. This book, the first comprehensive study of *Circus Sideshow*, situates the painting in the context of nineteenth-century Paris and of the many social changes France was undergoing. Renowned art historian Richard Thomson illuminates the roles of caricature, naturalist and avant-garde painting, and circus advertising; examines Seurat's use of contemporary aesthetic theory; and discusses how artists ranging from Rouault to Picasso mined the sideshow theme into the twentieth century. Illustrated with Seurat's related drawings, works by other artists, and period posters and broadsides, Seurat's *Circus Sideshow* delves into the history of traveling circuses and seasonal fairs in France, exploring

the ongoing appeal of this traditional form of popular entertainment through the fin de siècle. Two additional essays describe the painting's enthusiastic reception in New York upon its 1929 debut and present the results of a fresh technical examination of the canvas, making this volume the definitive resource on one of Seurat's most captivating works.

In recent years, computer vision is a fast-growing technique of agricultural engineering, especially in quality detection of agricultural products and food safety testing. It can provide objective, rapid, non-contact and non-destructive methods by extracting quantitative information from digital images. Significant scientific and technological advances have been made in quality inspection, classification and evaluation of a wide range of food and agricultural products. Computer Vision-Based Agriculture Engineering focuses on these advances. The book contains 25 chapters covering computer vision, image processing, hyperspectral imaging and other related technologies in peanut aflatoxin, peanut and corn quality varieties, and carrot and potato quality, as well as pest and disease detection. Features: Discusses various detection methods in a variety of agricultural crops Each chapter includes materials and methods used, results and analysis, and discussion with conclusions Covers basic theory, technical methods and engineering cases Provides comprehensive coverage on methods of variety identification, quality detection and detection of key indicators of agricultural products safety Presents information on technology of artificial intelligence including deep learning and transfer learning Computer Vision-Based Agriculture Engineering is a summary of the author's work over the past 10 years. Professor Han has presented his most recent research results in all 25 chapters of this book. This unique work provides students, engineers and technologists working in research, development, and operations in agricultural engineering with critical, comprehensive and readily accessible information. It applies development of artificial intelligence theory and methods including depth learning and transfer learning to the field of agricultural engineering testing.

Charles Lutwidge Dodgson--known better by his pseudonym, Lewis Carroll--was a 19th century English logician, mathematician, photographer, and novelist. He is especially remembered for his children's tale Alice's Adventures in Wonderland and its sequel, Through the Looking Glass. By the time of Dodgson's death in 1898, Alice (the integration of the two volumes) had become the most popular children's book in England. By the time of his centenary in 1932, it was perhaps the most famous in the world. This book presents a complete catalogue of Dodgson's personal library, with attention to every book the author is known to have owned or read. Alphabetized entries fully describe each book, its edition, its contents, its importance, and any particular relevance it might have had to Dodgson. The library not only provides a plethora of fodder for further study on Dodgson, but also reflects the Victorian world of the second half of the 19th century, a time of unprecedented investigation, experimentation, invention, and imagination. Dodgson's volumes represent a vast array of academic interests from Victorian England and beyond, including homeopathic medicine, spiritualism, astrology, evolution, women's rights, children's literature, linguistics, theology, eugenics, and many others. The catalogue is designed for scholars seeking insight into the mind of Charles Dodgson through his books.
