In this volume, a distinguished international group of contributors present the latest molecular, organismal, and epidemiological research on arenaviruses. Their work will broaden both the clinician's and the researcher's knowledge of basic mechanisms of immunological tolerance, viral immunosuppression, the nature of protective immune responses to vaccination, and viral effects on cell functions.

Reptiles have been a topic for scientific study for many decades and remain widely studied around the world. In particular, their reproductive patterns and strategies have been extensively studied, proving useful in analysis of life-history strategies. A pivotal aspect of reptilian reproduction is incubation of eggs. Oviparity is found in all turtles, crocodilians and the tuatara and is prevalent in many lizards and snakes. Many aspects of the eggs, embryos and incubation conditions have been the subject of numerous scientific reports. This volume is dedicated to systematic analysis of reptilian incubation. The concept for the book is to look at reptilian eggs, development and incubation conditions in a functional way with particular emphasis on the natural incubation environment and, rather than concentrating on Family accounts, (e.g. incubation in crocodilians) the chapters review the topics in all reptile types allowing for the first time a systematic comparison of incubation between crocodilians, turtles and squamates. In addition to reviewing current information, the authors briefly look towards the future and

outline areas where further research is needed.

Pectins and pectinases John Wiley & Sons

Pectin extracted from suitable plant sources is used as food ingredient for its gelling, stabilizing and thickening functionalities. Pectic substances also have a great impact on the quality of fresh and processed foods particularly fruits and vegetables. Plant products, fresh, extracted or processed, constitute a large part of the human diet. As a fibre, naturally present in these food products, pectic substances fulfil a nutritional function and are increasingly of interest as a health promoting polysaccharide. Pectin is one of the major components of the cell wall of dicotyledonous plants and probably one of the most complex macromolecules in nature. This book provides an update account of the most significant state of the art research on pectin and demonstrates that significant progress has been made in recent years. The book addresses progress made in the fields of biosynthesis and health modulating activities of pectin fractions, among other things. Research reported uses the most advanced current spectroscopic techniques and immunodetection methods combined with microscopy and chromatography, genomics of pectic enzymes of *Aspergillus niger*, and interaction of pectins with proteins. The progress documented in this book allows us to increasingly identify and influence the functionality of pectins and pectic enzymes both in vitro after isolation, as well as in the plants themselves. This knowledge is also reflected

in new applications of pectin and pectin degrading enzymes. 'Pectins and Pectinases' is of interest to beginning and advanced researchers and food specialists in academic and commercial food industry settings globally.

What makes a picture a picture? Franz Erhard Walther, who was honored with a Golden Lion at the 2017 Venice Biennale, took the idea of what an image is supposed to be and turned that concept upside down. At the end of the 1950s, he did this with a touch of nothingness, or to be more precise, with an entire group of works: the Leeren Flächen (Empty Surfaces). However, these surfaces in fact prove not to be empty at all. To the contrary, the minimal traces that they reveal are loaded with the potential for the viewer, as the creator of inner images, to cast his or her own projections. Thus, Franz Erhard Walther's statement, "the images are in your head," can be taken as programmatic for these Leeren Flächen. In these works, the image is no longer just material matter. Instead, the work demands an active viewer who adds to it the element of his or her own imagination. The viewer therefore becomes an integral component of the work, the images only become complete in the mind of the viewer. In an extraordinary stroke of serendipity for the field of art history, the works that are reproduced in this

catalogue for the first time had been considered lost, but now have resurfaced after several decades. Although they were misunderstood and rejected at the time of their production, these early works helped initiate a paradigm shift that later would culminate in his famous 1. Werksatz, the work with which Franz Erhard Walther became known internationally when it was exhibited at the Museum of Modern Art, New York in 1969.

This book continues first one of the same authors "Adaptive Image Processing Algorithms for Printing" and presents methods and software solutions for copying and scanning various types of documents by conventional office equipment, offering techniques for correction of distortions and enhancement of scanned documents; techniques for automatic cropping and de-skew; approaches for segmentation of text and picture regions; documents classifiers; approach for vectorization of symbols by approximation of their contour by curves; methods for optimal compression of scanned documents, algorithm for stitching parts of large originals; copy-protection methods by microprinting and embedding of hidden information to hardcopy; algorithmic approach for toner saving. In addition, method for integral printing is considered. Described

techniques operate in automatic mode thanks to machine learning or ingenious heuristics. Most the techniques presented have a low computational complexity and memory consumption due to they were designed for firmware of embedded systems or software drivers. The book reflects the authors' practical experience in algorithm development for industrial R & D.

In the early twentieth century, two wealthy white sisters, cousins to a North Carolina governor, wrote identical wills that left their substantial homeplace to a black man and his daughter. Maggie Ross, whose sister Sallie died in 1909, was the richest woman in Union County, North Carolina. Upon Maggie's death in 1920, her will bequeathed her estate to Bob Ross—who had grown up in the sisters' household—and his daughter Mittie Bell Houston. Mittie had also grown up with the well-to-do women, who had shown their affection for her by building a house for her and her husband. This house, along with eight hundred acres, hundreds of dollars in cash, and two of the white family's three gold watches went to Bob Ross and Houston. As soon as the contents of the will became known, more than one hundred of Maggie Ross's scandalized cousins sued to break the will, claiming that its bequest to black people proved that Maggie Ross was mentally incompetent. Revealing the details of this case and of the lives of the people involved in it, Gene Stowe presents a story that sheds light on and complicates our understanding of the Jim Crow

South. Stowe's account of this famous court battle shows how specific individuals, both white and black, labored against the status quo of white superiority and ultimately won. An evocative portrait of an entire generation's sins, *Inherit the Land: Jim Crow Meets Miss Maggie's Will* hints at the possibility for color-blind justice in small-town North Carolina. Gene Stowe grew up in Monroe, North Carolina, and was a reporter for the *Charlotte Observer* for twelve years. He is head of the writing program of Trinity School at Greenlawn in South Bend, Indiana. Carl A. Sergio earned degrees in art design and psychology at the University of Notre Dame. He is currently working in Chicago while preparing to attend graduate school. Learn more about the author at <http://genestowe.blogspot.com/>.

This book brings together twelve chapters on fungal pathogens with the goal of presenting an overview of the current areas of activity and the common themes that pervade research on these important organisms. The timing of the book is appropriate because we have gained sufficient insight from molecular genetic analyses to begin to make some comparisons between different fungal pathogens and to discuss the key advances that have been made. The chapters provide a broad survey of the important topics in fungal pathogenesis including morphogenesis, virulence, avirulence, and signaling. The reader also will find clear discussions of parasitism, mutualism, symbiosis, evolution, phylogeny and ecology for those fungi

where these issues are especially important. Finally, many of the chapters in this book illustrate the fact that we are on the verge of a revolution in our understanding of fungal pathogens because of the application of genomics to these organisms and their hosts. The fungi included in this book represent many of the most intensively investigated fungal pathogens of plants; in this regard, a chapter is also included for pathogens in the Phytophthora group, even though these organisms are no longer classified as fungi. It is appropriate to include Phytophthora for historical reasons and, in addition, the insights in terms of pathogenesis and host-specific interactions are important to keep in mind when considering fungal pathogens. Chapters are also included on pathogens of insects and humans, as well as endophytic fungi.

UP-TO-DATE, TECHNICALLY ACCURATE COVERAGE OF ESSENTIAL TOPICS IN IMAGE AND VIDEO PROCESSING This is the first book to combine image and video processing with a practical MATLAB®-oriented approach in order to demonstrate the most important image and video techniques and algorithms. Utilizing minimal math, the contents are presented in a clear, objective manner, emphasizing and encouraging experimentation. The book has been organized into two parts. Part I: Image Processing begins with an overview of the field, then introduces the fundamental concepts, notation, and terminology associated with image representation and basic image processing operations. Next, it discusses MATLAB® and its Image Processing Toolbox with the start of a series of chapters with hands-on activities and

step-by-step tutorials. These chapters cover image acquisition and digitization; arithmetic, logic, and geometric operations; point-based, histogram-based, and neighborhood-based image enhancement techniques; the Fourier Transform and relevant frequency-domain image filtering techniques; image restoration; mathematical morphology; edge detection techniques; image segmentation; image compression and coding; and feature extraction and representation. Part II: Video Processing presents the main concepts and terminology associated with analog video signals and systems, as well as digital video formats and standards. It then describes the technically involved problem of standards conversion, discusses motion estimation and compensation techniques, shows how video sequences can be filtered, and concludes with an example of a solution to object detection and tracking in video sequences using MATLAB®. Extra features of this book include: More than 30 MATLAB® tutorials, which consist of step-by-step guides to exploring image and video processing techniques using MATLAB® Chapters supported by figures, examples, illustrative problems, and exercises Useful websites and an extensive list of bibliographical references This accessible text is ideal for upper-level undergraduate and graduate students in digital image and video processing courses, as well as for engineers,

researchers, software developers, practitioners, and anyone who wishes to learn about these increasingly popular topics on their own.

Trouble with your PC? What do you do if your hard disk crashes or all you see are black lines on your monitor? With this handy "Troubleshooting" guide, it's easy to pinpoint -- and solve -- your own hardware and software problems. Fast! Each section opens with a troubleshooting chart to help quickly diagnose the source of the problem. It offers clear, step-by-step solutions to try right away, plus a full chapter of things to do to stay out of trouble or learn a new trick. Continuous support via the Troubleshooting "Latest Solutions" Web site provides monthly updates on additional problem solving information. Books in the "Troubleshooting" series are colorful, superbly organized, and easy to read, giving even novice users the confidence to fix it themselves -- without sending their PCs to the shop or wasting time on futile trial and error.

For over a decade, Andrew "bunnie" Huang, one of the world's most esteemed hackers, has shaped the fields of hacking and hardware, from his cult-classic book *Hacking the Xbox* to the open-source laptop Novena and his mentorship of various hardware startups and developers. In *The Hardware Hacker*, Huang shares his experiences in manufacturing and open hardware, creating an illuminating and compelling career retrospective. Huang's journey starts with his first visit to the staggering electronics markets in Shenzhen, with booths overflowing with capacitors, memory chips, voltmeters, and possibility. He shares how he navigated the overwhelming world of Chinese factories to bring chumby, Novena, and Chibitronics to life, covering everything from creating a Bill of Materials to choosing the factory to best fit his needs. Through this collection of personal essays and interviews on topics ranging from the legality of reverse engineering to a comparison of intellectual property practices between China and the United States, bunnie weaves engineering, law, and society into the tapestry of open hardware. With highly detailed passages on the ins and outs of manufacturing and a comprehensive take on the issues associated with open source hardware, *The Hardware Hacker* is an invaluable resource for aspiring hackers and makers.

This volume provides an overview of commonly used methods and protocols for cell fitness indicators. Chapters detail biochemical, fluorescence and luminescence-based strategies, computational, and label-free methodologies for assaying cellular viability by means of e.g. viscoelastic properties, impedance and multiphoton microscopy. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Cell Viability Assays: Methods and Protocols* aims to ensure successful results in the further study of this vital field.

This book presents multiple new and classical methods for studying the vital poly-ADP-ribose (pADPr) pathway. Beginning with techniques for the detection and quantification of the product of poly(ADP-ribose) polymerase (PARP) enzymatic activity and detection of variation in pADPr production during the cell cycle, the volume continues with sections on the identification of pADPr protein acceptors, methods focusing on studying molecular mechanisms of PARP functions in eukaryotic cells, particularly those involved in control of DNA repair and oxidative stress, as well as in expression regulation, approaches to the in vitro reconstitution of PARP-1 interaction with chromatin, the development and testing of small molecule PARP inhibitors, and the functions of understudied members of PARP family. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls.

Authoritative and practical, Poly(ADP-Ribose) Polymerase: Methods and Protocols, Second Edition serves as an ideal companion to the first edition for scientists whose investigations involve this important pathway. The chapter 'Identifying and Validating Tankyrase Binders and Substrates: A Candidate Approach' is published open access under a CC BY 4.0 license.
