Learn how to take professional-quality photographs using the same tricks today 's top photographers use (surprisingly, it 's easier than you 'd think)!

This is a completely, totally updated version of the #1 best-selling digital photography book of all time! It 's the award winning, worldwide smash hit, written by Scott Kelby, that 's been translated into dozens of different languages.

Here 's how Scott describes this book 's brilliant premise: " If you and I were out on a shoot, and you asked me, ' Hey, how do I get this flower to be in focus, with the background out of focus?, ' I wouldn 't stand there and give you a

photography lecture. In real life, I'd just say, 'Put on your zoom lens, set your f-stop to f/2.8, focus on the flower, and fire away.' That's what this book is all about: you and I out shooting where I answer questions, give you advice, and share the secrets I've learned just like I would with a friend—without all the technical explanations and techie photo speak."

This isn't a book of theory—full of confusing jargon and detailed concepts. This is a book on which button to push, which setting to use, and when to use it. With over 200 of the most closely guarded photographic "tricks of the trade," this book gets you shooting dramatically better-looking, sharper, more colorful, more professional-looking photos every time.

Each page covers a single concept that makes your photography better. Every time you turn the page, you learn another pro setting, tool, or trick to transform your work from snapshots into gallery prints. If you're tired of taking shots that look "okay," and if you're tired of looking in photography magazines and thinking, "Why don't my shots look like that?" then this is the book for you.

William Eggleston's Guide was the first one-man show of colour photographs ever presented at The Museum of Modern Art, New York, and the Museum's first publication of colour photography. The reception was divided and passionate. The book and show unabashedly forced the art world to deal with colour photography, a medium scarcely taken seriously at the time, and with the vernacular content of a body of photographs that could have been but definitely weren't some average person's Instamatic pictures from the family album. These photographs heralded a new mastery of the use of colour as an integral element of photographic composition. Bound in a textured cover inset with a photograph of a tricycle and stamped with yearbook-style gold lettering, the Guide contained 48 images edited down from 375 shot between 1969 and 1971 and displayed a deceptively casual, actually superrefined look at the surrounding world. Here are people, landscapes and odd little moments in and around Eggleston's home town of Memphis - an anonymous woman in a loudly patterned dress and cat's eye glasses sitting, left leg slightly raised, on an equally loud outdoor sofa; a coal-fired barbecue shooting up in flames, framed by a shiny silver tricycle; the curves of a gleaming black car fender, and someone's torso; a tiny, grey-haired lady in a faded, flowered housecoat, standing expectant, and dwarfed in the huge dark doorway of a mint-green room whose only visible furniture is a shaded lamp on an end table.

This issue of *Acta Neurochirurgica* presents the latest surgical and experimental approaches to the craniovertebral junction (CVJ). It discusses anterior midline (transoral transnasal), posterior (CVJ craniectomy laminectomy, laminotomy, instrumentation and fusion), posterolateral (far lateral) and anterolateral (extreme lateral) approaches using state-of-the-art supporting tools. It especially highlights open surgery, microsurgical techniques, neuronavigation, the O-arm system, intraoperative MR, neuromonitoring and endoscopy. Endoscopy represents a useful complement to the standard microsurgical approach to the anterior CVJ: it can be used transnasally, transorally and transcervically; and it provides information for better decompression without the need for soft palate splitting, hard palate resection, or extended maxillotomy. While neuronavigation allows improved orientation in the surgical field, intraoperative fluoroscopy helps to recognize residual compression. Under normal anatomic conditions, there

are virtually no surgical limitations to endoscopically assisted CVJ and this issue provides valuable information for the new generation of surgeons involved in this complex and challenging field of neurosurgery.

"Michael Levin's photographs have gained international attention. The American fine art magazine *Focus* declared that "Michael Levin's captivating images are soulful and evocative; he is truly one of the rising stars in the world of photography". He has won numerous prestigious awards including 'Photographer of the Year' at the 2006/07 International Photography Awards in New York and 'Fine Art Photographer of the Year' at the 2007 Prix de la Photographie in Paris."

"Using long exposures, Levin pulls his world taut, so that what remains in the landscape feels essential and revealed. There is a deceptive simplicity in his images as if these places need only to be found to be realised. Places that are simple and

totemic. It is Levin's pure sensibility which arranges this view, which finds these small moments and gives them weight and value and timelessness. He is particularly adept at capturing the smooth skin of light, the way it rolls over a place in the course of minutes rendering his subjects with their own private beauty. Levin illuminates these common places with new intent, making images which are both transfixing and transformative."
