In many facets of Western
culture, including archaeology,
there remains a legacy of

perceiving gender divisions as
natural, innate, and biological
in origin. This belief follows
that men are naturally pre-
disposed to public, intellectual
pursuits, while women are
innately designed to care for the
home and take care of children.
In the interpretation of material
culture, accepted notions of
gender roles are often applied
to new findings: the dichotomy
between the domestic sphere of
women and the public sphere of
men can color interpretations
of new materials. In this
innovative volume, the
contributors focus explicitly on
analyzing the materiality of

historic changes in the domestic
sphere around the world.

Combining a global scope with
great temporal depth, chapters
in the volume explore how
gender ideologies, identities,
relationships, power dynamics,
and practices were materially
changed in the past, thus
showing how they could be
changed in the future.

published several works in
French, which were primarily
editions, translations and

commentaries on Tibetan and Chinese Buddhist texts. The theories and concepts contained in this particular work are closely related to those of the Abhidharmakosa, and as such it makes a valuable companion to that larger work. Here Prof. Pruden has provided a masterful English translation of Prof. Lamotte's work, and has added a brief biography of Prof. Lamotte and his scholarly accomplishments to familiarize the reader with this great scholar of Buddhism. First Published in 2005, but published originally in 1938 on the eve of the Second World War, this work focuses on the last member of a distinguished group of genros, or elder statesmen, who participated in the wars of the Meiji restoration and in 1889 under Emperor Meiji, drew up the Imperial Constitution on which the Japanese political system was based. Prince Saionji was the president of the Privy Council, the second president of the Seyukai party, twice Prime Minister and Japan's Chief Delegate to the Paris Peace Conference.

Computer-Assisted Research

in the Humanities describes various computer-assisted research in the humanities and related social sciences. It is a compendium of data collected between November 1966 and May 1972 and published in *Computer and the Humanities*. The book begins with an analysis of language teaching texts including the DOVACK system, a program used for remedial reading instruction. It then discusses the objectives, types of computer used, and status of the Bibliographic On-line

Display (BOLD), semiotic systems, augmented human intellect program, automatic indexing, and similar research. The remaining chapters present computer-assisted research on language and literature, philosophy, social sciences, and visual arts. Students who seek a single reference work for computer-assisted research in the humanities will find this book useful.

Now in its third edition,

Optical Document Security has transformed from a compilation of related topics on the subject, to a comprehensive and cohesive treatment of all aspects of optical document security written by a leading expert with decades of experience. This completely revised and updated edition brings you to the cutting-edge of this field, with new coverage of paper-based security, printed security, security evaluation and features, and biometrics. *Ciarcia's Circuit Cellar* Routledge

Up and Running with Autodesk Inventor Simulation 2011 provides a clear path to perfecting the skills of designers and engineers using simulation inside Autodesk Inventor. This book includes

modal analysis, stress singularities, and H-P convergence, in addition to the new frame analysis functionality. The book is divided into three sections: dynamic solution, stress analysis, and frame analysis, with a total of nineteen chapters. The first chapter of each section offers an overview of the topic covered in that section. There is also an overview of the Inventor Simulation interface and its strengths, weaknesses, and workarounds. Furthermore, the book emphasizes the joint creation process and discusses

in detail the unique and powerful parametric optimization function. This book will be a useful learning tool for designers and engineers, and a source for applying simulation for faster production of better products. Get up to speed fast with real-life, step-by-step design problems—3 new to this edition! Discover how to convert CAD models to working digital prototypes, enabling you to enhance designs and simulate real-world performance without creating physical prototypes. Learn all about the frame analysis environment—new to

Autodesk Inventor Simulation 2011—and other key features of this powerful software, including modal analysis, assembly stress analysis, parametric optimization analysis, effective joint creation, and more. The aim of Hiding Making -
Showing Creation is twofold.
In the first instance, we seek to
trace the Nachleben of these
studio topoi from the
nineteenth century to today, in
particular focusing on how
artists have employed them as
strategies for showing certain
aspects of their practice (above

all those which perpetuate the
notions of artistic genius and
autonomy), while carefully
hiding others from view
(routine, failure, craft).
Secondly, in order to achieve
these goals, we have adopted a
method that we feel not only
does justice to the richness and
diversity of the topic but which,
we believe, will add a new
dimension to the already
abundant and ever growing
literature on the artist's studio.

in such fast-paced and topsy-turvy surroundings we watch the sky and earth for signs of regularity; looking to the changing seasons for hope and rejuvenation, and seeking out the voices of those who speak of constancy in the changes of the natural world. Hal Borland was such a voice. Every week, beginning in 1941, in the editorial pages of The New York Times he would speak of living on the land—this natural world we all try to understand. In this collection of 365 of his

essays, arranged daily within the twelve months, he writes with a familiarity of the ways of the country that is at once humble and resiliently knowledgeable. In *Sundial of the Seasons* you will find page-long ruminations on such topics as “Fog” (“a unique blend of mood and weather”), “The Bumblebee” (“Bumblebees tolerate man, up to a point”), “Dandelions” (“Neither flood nor drouth seems to discourage it”), and “Fishing” (“The fish caught are only a lesser part of the catch”), all in celebration of the everyday events of life in the country. In the period between the 1840s and the 1920s the British economy was transformed, from small-scale capitalism dominated by individual traders and partnerships to a complex financial structure dominated by large, joint-stock companies. The tremendous growth of big business created a world of new opportunities for criminal exploitation. The promotion and management of public companies and the trading of commercial securities proved vulnerable to the white-collar crimes of fraud and embezzlement. Problems of financial fraud were exacerbated by a climate of *laissez-faire* which championed the most

permissive commercial legislation in the world, and white-collar crime wreaked havoc on the modern British economy. This new book examines the spread of white-collar crime from the Victorian period to the early twentieth century and offers a new perspective on modern scandals.
