He was one of the most popular lay preachers and Christian apologists of his day: Sir Robert Anderson devoutly believed that the Bible was the inerrant word of God, and in this popular 1881 book-a companion to his Daniel in the Critics' Den- he mounts a defense of the prophetic Old Testament Book of Daniel, an early example of apocalyptic philosophy in Christianity. Students of the Bible will appreciate this historically valuable attempt to set straight the many controversies surrounding Daniel regarding its authorship and even the date of its writing. And anyone interested in the apocalyptic fervor of modern-day fundamentalist Christianity will find this an instructive and enlightening read. While at Scotland Yard, Irish police official and religious scholar SIR ROBERT ANDERSON (1841-1918) helped investigate the Jack the Ripper murders, but he is best remembered for his works of Bible study, including Forgotten Truths and The Silence of God.

"The essays in this stimulating collection attest to the scope and variety of Russia's influence on British culture. They move from the early nineteenth century -- when Byron sent his hero Don Juan to meet Catherine the Great, and an English critic sought to come to terms with the challenge of Pushkin -- to a series of Russian-themed exhibitions at venues including the Crystal Palace and Earls Court. The collection looks at British encounters with Russian music, the absorption with Dostoevskii and Chekhov, and finishes by shedding light on Britain's engagement with Soviet film."--Back cover.

"The world water problems are a due to bad governance, not to physical water scarcity." This book is inspired by this statement and explores whether it holds in a specific country, Spain, where climatic conditions -- Spain is one of the most arid countries of the European Union - would fully justify saying that water problems are due to physical water scarcity. The metrification of water uses and their monetary value is a first important step in understanding how reallocation of water among users could help mitigating many of current water problems in Spain. However, water reallocation among users or from users to nature is far from simple. Initiatives portrayed as the solution to the water governance 'jigsaw' -- e.g. water trade, improved water use efficiency, users collective action, public participation -- are not free of difficulties and shortcomings. The book explores the growing need for maintaining Spain's natural capital and the human component of water governance -- people's needs, wishes, (vested) interests, aspirations -- that often determine the result of decisions and, sometimes, lead water management to a deadlock. This book takes a step forward in showing a more complex - and also closer to reality - picture of water governance in Spain.
