## Silence within and beyond Pedagogical Settings Taylor & Francis

In 1952, the Federal Republic of West Germany concluded a treaty with Israel whereby the Germans had to pay three billion Deutschmarks in compensation for the Holocaust. However, the Israelis felt that Germany owed Israel a moral as well as a financial debt, and thus expected further aid and protection. Although Germany made several concessions in favour of the Jewish State, particularly in the domain of armament, as Germany's political status increased, its national interest gradually took priority over that of Israel. George Lavy examines the grounds which motivated Germany to grant aid to Israel and the change in their relations as the German economy flourished and gained influence in world affairs.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

This is the first book to consider both deaf and hearing perspectives on the dynamics of adult sibling relationships. Deaf and hearing authors Berkowitz and Jonas conducted interviews with 22 adult siblings, using ASL and spoken English, to access their intimate thoughts. A major feature of the book is its analysis of how isolation impacts deaf-hearing sibling relationships. The book documents the 150 year history of societal attitudes embedded in sibling bonds and identifies how the siblings' lives were affected by the communication choices their parents made. The authors weave information throughout the text to reveal attitudes toward American Sign Language and the various roles deaf and hearing siblings take on as monitors, facilitators, signing-siblings and sibling-interpreters, all of which impact lifelong bonds.

The needs of a true competition engine are quite different than those of the engine under the hood of a typical commuter car. From the basic design needs, to the base component materials, to the sizes of the flow-related hardware, to the precision of the machining, to the capabilities of each pertinent system, very few similarities exist. Many books exist showcasing how to make street-based engines more powerful and/or durable. This book is different, in that it focuses purely on the needs of high rpm, high durability, high-powered racing engines. It begins by looking at the raw design needs, and then shares how these needs are met at the various phases of an engine's development, assembly, testing and tuning. This book features reviews of many popular modern tools, techniques, products, and testing/data collecting machinery. Showing the proper way to use such tools, how to accurately collect data, and how to use the data effectively when designing an engine, is critical information not readily available elsewhere. The special needs of a competition engine aren't commonly discussed, and the many secrets competition engine builders hold closely are openly shared on the pages here. Authored by veteran author John Baechtel, [Competition Engine Building](#) stands alone as a premier guide for enthusiasts and students of the racing engine. It also serves as a reference guide for experienced professionals anxious to learn the latest techniques or see how the newest tools are used. Baechtel is more than just an author, as he holds (or has held) several World Records at Bonneville. Additionally, his engines have won countless races in many disciplines, including road racing and drag racing.

"Much has been written about deaf identities, however, no single book has focused specifically on how different academic disciplines conceptualize deaf identities in one fell swoop. This book, "Deaf Identities: Exploring New Frontiers," does exactly that. It is a unique compilation of multidisciplinary perspectives on the lens of deaf identities written by scholars representing a variety of disciplines, including anthropology, counseling, education, literary criticism, practical religion, philosophy, psychology, sociology, social work, and Deaf Studies. Nowhere else can one find careful scrutiny of the meaning of deaf identities within, for example, the disciplines of philosophy and religion. Where else can one find a sense of identity in "passing" as a deaf person instead of "almost passing" as a hearing person? Where else can one examine mutating identities in progressing from Spiderman to the Incredible Hulk? The book focuses on how the contributors perceive what deaf identities represent, how these identities develop, and the societal influences that shape these identities. Intersectionality, examination of medical, educational, and family systems, linguistic deprivation, the role of oppressive influences, what the "deaf body" is about, strategies to facilitate positive deaf identity development, and how ethical values are interpreted are among the multiple topics examined in the search to better understand how deaf identities come into being. In presenting their deaf identity paradigms, contributors have endeavored to intertwine both scholarly and personal perspectives in their efforts to personalize academic content. The result is a book that reinforces the multiple ways in which deaf identities are manifested"--

To extract maximum performance, an engine needs an efficient, well-designed, and properly tuned exhaust system. In fact, the exhaust system's design, components, and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the parts, and fabricate the exhaust system that delivers the best performance for car and particular application. Master engine builder and award-winning writer Mike Mavrigian explains exhaust system principles, function, and components in clear and concise language. He then details how to design, fabricate, and fit exhaust systems to classic street cars as well as for special and racing applications. Air/exhaust-gas flow dynamics and exhaust system design are explained. Cam duration and overlap are also analyzed to determine how an engine breathes in air/fuel, as the exhaust must efficiently manage this burned mixture. Pipe bending is a science as well as art and you ' re shown how to effectively crush and mandrel bend exhaust pipe to fit your header/manifold and chassis combination. Header tube diameter and length is taken into account, as well as the most efficient catalytic converters and resonators for achieving your performance goals. In addition, Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems. When building a high-performance engine, you need a high-performance exhaust system that ' s tuned and fitted to that engine so you can realize maximum performance. This comprehensive book is your guide to achieving

ultimate exhaust system performance. It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car. No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high-performance applications.
