Within the Frame is a book about finding and expressing your photographic vision, specifically where people, places, and cultures are concerned. A personal book full of real-world wisdom and incredible images, author David duChemin (of pixelatedimage.com) shows you both the how and the why of finding, chasing, and expressing your vision with a camera to your eye. Vision leads to passion, and passion is a cornerstone of great photography. With it, photographs draw the eye in and create an emotional experience. Without it, a photograph is often not worth—and can ’ t capture—a viewer ’ s attention. Both instructional and inspirational, Within the Frame helps you on your photographic journey to make better images of the places and people you love, whether they are around the world or in your own backyard. duChemin covers how to tell stories, and the technology and tools we have at our disposal in order to tell those narratives. Most importantly, he stresses the crucial theme of vision when it comes to photographing people, places, and cultures—and he helps you cultivate and find your own vision, and then fit it within the frame.

Winner of the 2019 John Collier Jr Award Street style blogging has experienced a meteoric rise in popularity over the last decade. Amateur photographers, often with no formal training in fashion, have become critical arbiters of taste and trends, influencing the representations that appear in magazines and on runways, and putting new cities on the fashion world map. This cutting-edge book documents the evolution of street style photography, from the fieldwork photos of early anthropology to the glamorized snapshots that appear on blogs today, and explores the structural shifts in the global fashion industry that street style has helped bring about. Chronicling author and anthropologist Brent Luvaas' experience over three years of blogging through vivid street imagery and rich ethnographic detail, this book turns the lens of street style photography back onto anthropology itself, arguing that the phenomenon is a powerful mode of amateur ethnography. Bloggers blur the distinction between professional and amateur, insider and outsider, self and brand. This book documents that blur from the ground level—from the streets of Philadelphia to the sidewalks of New York Fashion Week. Street Style is an essential read for students and scholars of fashion, anthropology, sociology, media and cultural studies, and fans of street style photography alike.

The unique relationship between word and image in ancient Egypt is a defining feature of that ancient culture's records. All hieroglyphic texts are composed of images, and large-scale figural imagery in temples and tombs is often accompanied by texts. Epigraphy and palaeography are two distinct, but closely related, ways of recording, analyzing, and interpreting texts and images. This Handbook stresses technical issues about recording text and art and interpretive questions about what we do with those records and why we do it. It offers readers three key things: a diachronic perspective, covering all ancient Egyptian scripts from prehistoric Egypt through the Coptic era (fourth millennium BCE-first half of first millennium CE), a look at recording techniques that considers the past, present, and future, and a focus on the experiences of colleagues. The diachronic perspective illustrates the range of techniques used to record different phases of writing in different media. The consideration of past, present, and future techniques allows readers to understand and assess why epigraphy and palaeography is or was done in a particular manner by linking the aims of a particular effort with the technique chosen to reach those aims. The choice of techniques is a matter of goals and the records' work

circumstances, an inevitable consequence of epigraphy being a double projection: geometrical, transcribing in two dimensions an object that exists physically in three; and mental, an interpretation, with an inevitable selection among the object's defining characteristics. The experiences of colleagues provide a range of perspectives and opinions about issues such as techniques of recording, challenges faced in the field, and ways of reading and interpreting text and image. These accounts are interesting and instructive stories of innovation in the face of scientific conundrum.
