There is a rapidly growing interest in, and  
demand for, non-timber forest products  
(NTFPs). They provide critical resources  
across the globe fulfilling nutritional,  
medicinal, financial and cultural needs.  
However, they have been largely overlooked  
in mainstream conservation and forestry  
politics. This volume explains the use and  
importance of certification and eco-labelling  
for guaranteeing best management practices  
of non-timber forest products in the field.  
Using extensive case studies and global  
profiles of non-timber forest products, this  
work not only seeks to further our  
comprehension of certification processes but  
also broaden understanding of non-timber  
forest product management, harvesting and  
marketing. It should be useful to forest  
managers, policy-makers and conservation  
organizations as well as for academics in these  
areas.

The National Strategy for  
Combating Antibiotic Resistant  
Bacteria, published in 2014, sets  
out a plan for government work to  
mitigate the emergence and spread  
of resistant bacteria. Direction on  
the implementation of this strategy  
is provided in five-year national  
action plans, the first covering  
2015 to 2020, and the second  
covering 2020 to 2025. Combating  
Antimicrobial Resistance and  
Protecting the Miracle of Modern  
Medicine evaluates progress made  
against the national strategy. This  
report discusses ways to improve  
detection of resistant infections and  
estimate the risk to human health  
from environmental sources of  
resistance. In addition, the report  
considers the effect of agricultural

practices on human and animal  
health and animal welfare and ways  
these practices could be improved,  
and advises on key drugs and  
diseases for which animal-specific  
test breakpoints are needed.

Sequence - Evolution - Function is an introduction to the computational approaches that play a critical role in the emerging new branch of biology known as functional genomics. The book provides the reader with an understanding of the principles and approaches of functional genomics and of the potential and limitations of computational and experimental approaches to genome analysis. Sequence - Evolution - Function should help bridge the "digital divide" between biologists and computer scientists, allowing biologists to better grasp the peculiarities of the emerging field of Genome Biology and to learn how to benefit from the enormous amount of sequence data available in the public databases. The book is non-technical with respect to the computer methods for genome analysis and discusses these methods from the user's viewpoint, without addressing mathematical and algorithmic details. Prior practical familiarity with the basic methods for sequence analysis is a major advantage, but a reader without such experience will be able to use the book as an introduction to these methods. This book is perfect for introductory level courses in computational methods for comparative and functional genomics.

### Chemical Demilitarization Taylor & Francis

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Putting into the air the largest striking

force ever committed to battle was a highly complex task and remains one of the great achievements of the war. With more than three hundred photographs and dozens of line drawings, this book relates the procedures and the improvisations that lay behind the success of this mighty air force. Over 1,700 aircraft at a time, involving 15,000 men and a vastly sophisticated supply chain, were engaged in a ceaseless war of high altitude daylight precision bombing that did much to secure eventual allied success.
