Particle technology is a term used to refer to the science and technology related to the handling and processing of particles and powders. The production of particulate materials, with controlled properties tailored to subsequent processing and applications, is of major interest to a wide range of industries, including chemical and process, food, pharmaceuticals, minerals and metals companies and the handling of particles in gas and liquid solutions is a key technological step in chemical engineering. This textbook provides an excellent introduction to particle technology with worked examples and exercises. Based on feedback from students and practitioners worldwide, it has been newly edited and contains new chapters on slurry transport, colloids and fine particles, size enlargement and the health effects of fine powders. Topics covered include: Characterization (Size Analysis) Processing (Granulation, Fluidization) Particle Formation (Granulation, Size Reduction)

Storage and Transport (Hopper Design, Pneumatic Conveying, Standpipes, Slurry Flow) Separation (Filtration, Settling, Cyclones) Safety (Fire and Explosion Hazards, Health Hazards) Engineering the Properties of Particulate Systems (Colloids, Respirable Drugs, Slurry Rheology) This book is essential reading for undergraduate students of chemical engineering on particle technology courses. It is also valuable supplementary reading for students in other branches of engineering, applied chemistry, physics, pharmaceuticals, mineral processing and metallurgy. Practitioners in industries in which powders are handled and processed may find it a useful starting point for gaining an understanding of the behavior of particles and powders. Review of the First Edition taken from High Temperatures - High pressures 1999 31 243 – 251 ". This is a modern textbook that presents clear-cut knowledge. It can be successfully used both for teaching particle technology at universities and for individual study of engineering problems in powder processing."

'A highly challenging set of essays on sense-making in a public sector world that previously contained a dearth of relevant theory. Moving beyond the orthodoxies of policy and management, this work advances the critical position that post modernism must be relevant to practice by building from the narratives of empowered practitioners faced with finding solutions that go beyond traditional boundaries.' – Robert Agranoff, Indiana University, Bloomington, US and Instituto Universitario Ortega y Gasset, Madrid, Spain Challenging the traditional orthodoxies of public management, this timely and comprehensive book adopts a lively and critical approach to key questions of public policy and management. With state-of-the-art contributions from leading international scholars, *Public Management in the Postmodern Era* explores a public sector that has moved irreversibly beyond the familiar territory of New Public Management and the exhausted tenets of modernization. Within a global environment where the old explanations and solutions have failed, the book advances a postmodern analysis. It argues strongly its original case that postmodern perspectives are of immediate relevance to issues of practice as well as to enduring problems of theory. The ambitious remit of the book will be of direct value to practitioners, scholars, academic researchers and students in politics, public policy and public management. With an international scope, the book will appeal to a worldwide audience.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. The emerging medical and recreational cannabis industry is plagued by IRS Code §280E which prohibits normal business deductions due to federal laws concerning Schedule I drugs. The IRS code has hampered the industry, and many fledging dispensary and cultivation facility owners have been faced with ruinous audits, large tax bills, and very few places to turn to get help in reducing the tax burden created by IRS §280E. This book explains how to maximize capitalization of costs, and deals with IRS §263A as well helping newcomers to the business understand how to create costing methods that will withstand scrutiny by the IRS. Within the book is a thorough explanation of this particular tax code along with a number of recommendation on how to reduce its impact. Also included in the book are 7 business cases with income statements, balance sheets, a narrative, and prepared tax returns with notes on how to handle these tax issues. The book also contains the IRS Audit Guide for Cash Businesses, a must read document for anyone struggling with IRS compliance.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
