The West is at war. Not a war of the old sort, fought with the thunder of guns, but a new sort, fought with the rustle of money, the shrill mantras of propagandists, and the stealthy whispers of spies. Often described as 'hybrid war,' a blend of the military and the political, it reflects both the way that war is changing in the modern world as well as Russia's attempt to divide, demoralize and distract the West as it asserts its claim to be a great power, with a sphere of influence and Ukraine and beyond. This study explores the two parallel forms of 'non-linear warfare' and provides recommendations as to how the West can best respond.

Hybrid War Or Gibridnaya Voyna? Getting Russia's Non-Linear Military Challenge Right Andrew Mowbray Pub

This book focuses on the use of molecular tools to study small populations of rare and endangered mammals, and presents case studies that apply an evolutionary framework to address innovative questions in the emerging field of mammalian conservation genomics using a highly diverse set of novel molecular tools. Novel and more precise molecular technologies now allow experts in the field of mammology to interpret data in a more contextual and empirical fashion and to better describe the evolutionary and ecological processes that are responsible for the patterns they observe. The book also demonstrates how recent advances in genetic/genomic technologies have been applied to assess the impact of environmental/anthropogenic changes on the health of small populations of mammals. It examines a range of issues in the field of mammalian conservation genomics, such as the role that the genetic diversity of the immune system plays in disease protection and local adaptation; the use of noninvasive techniques and genomic banks as a resource for monitoring and restoring populations; the structuring of population by physical barriers; and genetic diversity. Further, by integrating research from a variety of areas - including population genetics, molecular ecology, systematics, and evolutionary and conservation biology - it enables readers to gain a deeper understanding of the conservation biology of mammals that are at increasing risk of extinction at local, regional and global scales. As such, it offers a unique resource for a broad readership interested in the conservation biology of mammals and conservation management strategies to better preserve biodiversity.

Advances in technology can bring about dramatic changes in military operations, often termed revolutions in military affairs or RMAs. Such technology-driven changes in military operations are not merely a recent phenomenon: they have been occurring since the dawn of history, they will continue to occur in the future, and they will continue to bestow a military advantage on the first nation to develop and use them. Accordingly, it is important to the continued vitality and robustness of the U.S. defense posture for the DoD R&D community to be aware of technology developments that could revolutionize military operations in the future, and for the U.S. military services to be on the lookout for revolutionary ways in which to employ those technologies in warfare. This report examines the history of past RMAs, to see what can be learned from them regarding the challenge confronting the DoD today, when it has set out on a concerted effort to bring about a technology-driven transformation of the U.S. military to achieve the operational goals outlined in Joint Vision 2010. Among its many findings are three of particular note: RMAs are rarely brought about by dominant players (such as the U.S. military is today). For a dominant player to bring about an RMA requires a receptive organizational climate, fostering a continually refined vision of how war may change in the future and encouraging vigorous debate regarding the future of the organization; senior officers with traditional credentials willing to sponsor new ways of doing things and able to establish new promotion pathways for junior officers practicing a new way of war; mechanisms for experimentation, to discover, learn, test and demonstrate new ideas; and ways of responding positively to the results of successful experiments, in terms of doctrinal changes, acquisition programs, and force structure modifications. The DoD has some of these elements today, but is missing others. The report makes specific suggestions regarding ways of filling in the missing elements. Doing these things will facilitate DoD's force transformation activities and help ensure that the next RMA is brought about by the United States. and not some other nation.

In *To Live Is Christ*, best-selling author Beth Moore travels on a spiritual odyssey through the life of one of Christianity's most fervent journeymen, the apostle Paul, tracing his story from childhood to martyrdom. Proclaiming his faith as a benchmark in New Testament Scripture, Beth writes, "I have accepted many of Paul's words as a personal challenge. 'I want to know Christ' has become my plea. 'To live is Christ and to die is gain' has become my hope. And to borrow his words once more, 'Not that I have already obtained all this . . . but I press on.'" Paul's undying passion for Christ continues to inspire and challenge those with a deep spiritual hunger for

the things of God. Readers will be greatly refreshed by the obvious mercy of God that causes those who have failed him to repent and serve him wholeheartedly and effectively.

Conservation Genetics in Mammals Altnet Books

It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

Even in its earliest history, cyberspace had disruptions, caused by malicious actors, which have gone beyond being mere technical or criminal problems. These cyber conflicts exist in the overlap of national security and cybersecurity, where nations and non-state groups use offensive and defensive cyber

capabilities to attack, defend, and spy on each other, typically for political or other national security purposes. A two-year study, resulting in the new book -- *A Fierce Domain: Cyber Conflict, 1986 to 2012* -- has made the following conclusions, which are very different from those that policymakers are usually told: Cyber conflict has changed only gradually over time, making historical lessons especially relevant (though usually ignored). The probability and consequence of disruptive cyber conflicts has been hyped while the impact of cyber espionage is consistently underappreciated. The more strategically significant the cyber conflict, the more similar it is to conflict in the other domains ? with one critical exception.
