A history of the elite medical corps at the forefront of the world's most dangerous epidemics cites their victories over such diseases as polio, cholera and smallpox, tracing their international expansion and present-day battles against such health risks as smoking, obesity and gun violence. Composition Amherst Media, Inc

"Today Singapore ranks sixth in the world in healthcare outcomes well ahead of many developed countries, including the United States. The results are all the more significant as Singapore spends less on healthcare than any other high-income country, both as measured by fraction of the Gross Domestic Product spent on health and by costs per person. Singapore achieves these results at less than one-fourth the

cost of healthcare in the United States and about half that of Western European countries. Government leaders, presidents and prime ministers, finance ministers and ministers of health, policymakers in congress and parliament, public health officials responsible for healthcare systems planning, finance and operations, as well as those working on healthcare issues in universities and think-tanks should know how this system works to achieve affordable excellence."--Publisher's website.

Iwo Spruß gibt einen Überblick über die Interaktion eines Kraftfahrzeugs mit einer nassen Fahrbahn sowie der hieraus resultierenden Fahrzeugeigen-

und -fremdverschmutzung. Er zeigt, dass ein Verständnis dieser Prozesse notwendig ist, um neben den klassischen, aerodynamischen Optimierungsgrößen im Fahrzeugentwicklungsprozess durch Vermeidung der Fahrzeugverschmutzung einen Beitrag zur Sicherheit im Straßenverkehr zu leisten. Die Erkenntnisse aus den vorgestellten Untersuchungen an einem Grundkörper als auch an einer Vollfahrzeuggeometrie dienen dem Autor als Grundlage für die Weiterentwicklung und Validierung eines Werkzeugs zur numerischen Strömungssimulation.

Somit ergibt sich die Möglichkeit, in einer früheren Phase des Fahrzeugentwicklungsprozesses bereits erste Aussagen über die Fahrzeugverschmutzung treffen zu können.

Practical Watch Repairing The Mountaineers Books

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations.

The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

Since 1958 the Maritime

Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The

first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
