A Zen poem is nothing other than an expression of the enlightened mind, a handful of simple words that disappear beneath the moment of insight to which it bears witness. Poetry has been an essential aid to Zen Buddhist practice from the dawn of Zen—and Zen has also had a profound influence on the secular poetry of the countries in which it has flourished. Here, two of America's most renowned poets and translators provide an overview of Zen poetry from China and Japan in all its rich variety, from the earliest days to the twentieth century. Included are works by Lao Tzu, Han Shan, Li Po, Dogen Kigen, Saigyō, Bashō, Chiao Jan, Yuan Mei, Ryōkan, and many others. Hamill and Seaton provide illuminating introductions to the Chinese and Japanese sections that set the poets and their work in historical and philosophical context. Short biographies of the poets are also included.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the

models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
