"An extremely good writer, [Ayers] is well worth reading . . . on the South and Southern history."—Stephen Sears, Boston Globe The Southern past has proven to be fertile ground for great works of history. Peculiarities of tragic proportions—a system of slavery flourishing in a land of freedom, secession and Civil War tearing at a federal Union, deep poverty persisting in a nation of fast-paced development—have fed the imaginations of some of our most accomplished historians. Foremost in their ranks today is Edward L. Ayers, author of the award-winning and ongoing study of the Civil War in the heart of America, the Valley of the Shadow Project. In wide-ranging essays on the Civil War, the New South, and the twentieth-century South, Ayers turns over the rich soil of Southern life to explore the sources of the nation's and his own history. The title essay, original here, distills his vast research and offers a fresh perspective on the nation's central historical event.

Statement of Disbursements of the House as Compiled by the Chief Administrative Officer from ... Muska/Lipman

Thirty-eight-year-old widow Anne Marie Roche, the owner of a successful Seattle bookstore, creates a list of twenty wishes, and, while acting upon her wishes, encounters an eight-year-old girl named Ellen who helps her complete her list—with unexpected results.

Papers presented here originate from a session held during the 2015 Annual Meeting of the European Association of Archaeologists (Glasgow). The contributors attempt to present the entanglement between the physical phenomenon of fire, the pyro-technological instrument that it is, its material supports, and the

human being.

Indonesia, the First 50 Years, 1945-1995 Elsevier

In this completely updated and revised edition of *Designing with the Mind in Mind*, Jeff Johnson provides you with just enough background in perceptual and cognitive psychology that user interface (UI) design guidelines make intuitive sense rather than being just a list or rules to follow. Early UI practitioners were trained in cognitive psychology, and developed UI design rules based on it. But as the field has evolved since the first edition of this book, designers enter the field from many disciplines. Practitioners today have enough experience in UI design that they have been exposed to design rules, but it is essential that they understand the psychology behind the rules in order to effectively apply them. In this new edition, you'll find new chapters on human choice and decision making, hand-eye coordination and attention, as well as new examples, figures, and explanations throughout. Provides an essential source for user interface design rules and how, when, and why to apply them Arms designers with the science behind each design rule, allowing them to make informed decisions in projects, and to explain those decisions to others Equips readers with the knowledge to make educated tradeoffs between competing rules, project deadlines, and budget pressures Completely updated and revised, including additional coverage on human choice and decision making, hand-eye coordination and attention, and new mobile and touch-screen examples throughout

David Busch's Sony Alpha DSLR-A580/A560 Guide to Digital Photography Maker Media, Inc.

For anyone thinking about starting an online business, this resource provides all the steps needed to take an idea and turn it into reality. Wiley Pathways E-Business begins by discussing the legal considerations involved in launching the business as well as tips for acquiring the necessary financing. It also delves into the techniques to follow for operating the e-business, including selecting the right products, managing inventory, creating a marketing plan, and more. The book then covers how to create a secure Web site that can track customer data.

Not since the 1920s has American architecture undergone such fundamental changes as those which are revitalizing the profession today. But in this period of great artistic fertility and unrest, there has yet to emerge a critical theory capable of analyzing the conditions and examining the attitudes by which our architecture is being redefined. Gavin Macrae-Gibson is the first of a generation of architects educated in the 1970s to construct a method of criticism powerful enough to interpret this new architecture. The theory is built upon a close reading of seven works, all completed in the 1980s: Frank Gehry's Gehry House in Santa Monica, Peter Eisenman's House El Even Odd, Cesar Pelli's Four Leaf Towers in Houston, Michael Graves' Portland Public Service building, Robert Stern's Bozzi residence in East Hampton, Allan Greenberg's Manchester Superior Courthouse in Connecticut, and Venturi, Rauch and Scott Brown's Gordon Wu Hall at Princeton. The author

uses urban plans, and architectural drawings and photographs to reveal the layers of meaning present in each building, including the deepest layer—its secret life. At this level the buildings have in common the fact that their meaning is derived from the realities of an imperfect present and no longer from the anticipation of a utopian future. Gavin Macrae-Gibson is a practicing architect. He has been Visiting Lecturer in Architectural Theory at Yale University since 1982, and has taught and lectured widely throughout the United States and Canada. A Graham Foundation Book. The Graham Foundation Architecture Series Two decades ago, the Graham Foundation for Advanced Study in the Fine Arts published Robert Venturi's epoch-making *Complexity and Contradiction in Architecture* in association with the Museum of Modern Art. Now the foundation is renewing its commitment to architectural literature by announcing the first two titles of a new series it is launching with The MIT Press. The aim is to publish books that are of crucial importance to the theory and practice of architecture, and that will enhance the understanding of architecture as a humanist discipline. The series will feature original texts by contemporary architects, historians, theorists, and critics.

The new Sony Alpha DSLR-A580 and A560 are innovative new, mid-level dSLR models that will replace the A550 and A500 models. They are the first from Sony to include full HDTV video as well as sophisticated features such as 7 frames-per-second continuous shooting and Sweep Panorama, 16.7 (A580) and 14.6 (A560) megapixel resolutions. David Busch's *SONY ALPHA DSLR-A580/A560 Guide to Digital Photography* shows you how, when, and why to use all the cool features, controls, and functions of both the A580 and A560 to take great photographs of anything. Introductory chapters will help you get comfortable with the basics of your camera before you dive right into exploring creative ways to apply A580 and A560 file formats, resolution, aperture/priority exposure, and automatic exposure features. Beautiful, full-color images illustrate where the essential buttons and dials are, so you'll quickly learn how to use your A580 or A560, and use it like a pro!

Many people think of Linux as a computer operating system, running on users' desktops and powering servers. But Linux can also be found inside many consumer electronics devices. Whether they're the brains of a cell phone, cable box, or exercise bike, embedded Linux systems blur the distinction between computer and device. Many makers love microcontroller platforms such as Arduino, but as the complexity increases in their projects, they need more power for applications, such as computer vision. The BeagleBone is an embedded Linux board for makers. It's got built-in networking, many inputs and outputs, and a fast processor to handle demanding tasks. This book introduces you to both the original BeagleBone and the new BeagleBone Black and gets you started with projects that take advantage of the board's processing power and its ability to interface with the outside world.
