The term "zooplankton" describes the community of floating, often microscopic, animals that inhabit aquatic environments. Being near the base of the food chain, they serve as food for larger animals, such as fish. The ICES (International Council for the Exploration of the Sea) Zooplankton Methodology Manual provides comprehensive coverage of modern techniques in zooplankton ecology written by a group of international experts. Chapters include sampling, acoustic and optical methods, estimation of feeding, growth, reproduction and metabolism, and up-to-date treatment of population genetics and modeling. This book will be a key reference work for marine scientists throughout the world. Sampling and experimental design Collecting zooplankton Techniques for assessing biomass and abundance Protozooplankton enumeration and biomass estimation New optical and acoustic techniques for estimating zooplankton biomass and abundance Methods for measuring zooplankton feeding, growth, reproduction and metabolism Population genetic analysis of zooplankton Modelling zooplankton dynamics This unique and comprehensive reference work will be essential reading for marine and freshwater research scientists and graduates entering the field.

The book "Similar but Different. Bell Beakers in Europe" deals with a cultural phenomenon, known as the Bell Beaker culture, that during the 3rd millennium B.C. was present throughout Western and Central Europe. This development played an important role in the formation of the Bronze Age at the turn of the 3rd and the 2nd millennium BC. This book consists of 10 chapters – in each a specific issue is discussed connected with Bell Beakers. The chapters are divided into three parts concerning consecutively: general problems, issues of the so-called common ware and the character of the Bell Beakers in

particular places in Europe. The reader can become acquainted with interpretations of the whole phenomenon, based on inter-regional similarities – the works of H. Case, M. Vander Linden, L. Salanova, and R. Furestier. The second part consists of the chapters by Ch. Strahm, M. Besse and V. Leonini that focus on the matter of the so-called common ware: some ceramic vessels, which are not part of the 'beaker set', but accompany it in many regions. That is one of the Bell Beakers' analytical problems, which is still argued about. The three last chapters show the specific features of some regional centers, where Bell Beakers developed, the attention was focused on the Bell Beakers' localities'. These are the works of A. Gibson (Britain), O. Lemerrier (Mediterranean France) and L. Sarti (central Italy). The book shows the basic features of the Bell Beaker culture in Europe. These however are still a challenge for researchers, because the phenomenon had two faces. On the one hand it is characterized by a set of material culture which is occurring in many places Western and Central Europe. On the other hand, in specific areas, these features were relatively easily influenced by the local environment, they got some sort of regional particularities. That is the essence of the Bell Beakers, hence the title of this book: 'similar but different'. This book is a reprint, the first edition was published in 2004 by the Adam Mickiewicz University, Poznań.

When it comes to photography, it's all about the light. After spending more than thirty years behind the lens—working for National Geographic, Time, Life, and Sports Illustrated—Joe McNally knows about light. He knows how to talk about it, shape it, color it, control it, and direct it. Most importantly, he knows how to create it...using small hot shoe flashes. In *The Hot Shoe Diaries*, Joe brings you behind the scenes to candidly share his lighting solutions for a ton of great images. Using Nikon Speedlights, Joe lets you in on his uncensored thought process—often funny, sometimes serious, always fascinating—to demonstrate how he makes his pictures with these small flashes. Whether he's photographing a gymnast on the Great Wall, an alligator in a swamp, or a fire truck careening through Times Square, Joe uses these flashes to create great light that makes his pictures sing.

In his sixth book, renowned photographer, popular instructor, and best-selling author Bryan Peterson challenges and inspires us to see close-up photography in new ways when we view it through his eyes. You've seen the dewdrops, but what about dewdrops on a bird's wing or raindrops on a car windshield? You've seen the bumblebees on vibrant flowers, but what about the fluid edge of just one petal or the colorful rusting metal at industrial sites? Even when Peterson does capture the more traditional subjects, it's done in untraditional ways—and often with minimal specialized equipment! Most important, he moves beyond the commonplace to inspire new ways of getting close, using your lenses, and discovering unconventional subjects.

The indiscriminate use of chemical substances in industrial processes and anthropogenic activities, have resulted in the release of these compounds into aquatic ecosystems through municipal, hospital and industrial discharges, producing various undesired effects on the environment and on species of ecological interest. These compounds, such as metals, pesticides, emerging pollutants and other substances are persistent and susceptible to biotic and/or abiotic transformations, yielding metabolites that can be more toxic than the original compounds. In this book, researchers from diverse environmental science disciplines share their experiences in countries such as Argentina, Brazil, Colombia and Mexico, and critically examine the problem of contaminants in aquatic ecosystems in Latin America, as well as the risks presented by their presence.
