Thinking about moving to mars? Well, why not? Mars, after all, is the planet that holds the greatest promise for human colonization. But why speculate about the possibilities when you can get the real scientific scoop from someone who's been happily living and working there for years? Straight from the not-so-distant future, this intrepid pioneer's tips for physical, financial, and social survival on the Red Planet cover:

- How to get to Mars (Cycling spacecraft offer cheap rides, but the smell is not for everyone.)
- Choosing a spacesuit (The old-fashioned but reliable pneumatic Neil Armstrong style versus the sleek new—but anatomically unforgiving—elastic "skinsuit.")
- Selecting a habitat (Just like on Earth: location, location, location.)
- Finding a job that pays well and doesn't kill you (This is not a metaphor on Mars.)
- How to meet the opposite sex (Master more than forty Mars-centric pickup lines.)

With more than twenty original illustrations by Michael Carroll, Robert Murray, and other renowned space artists, *How to Live on Mars* seamlessly blends humor and real science, and is a practical and exhilarating guide to life on our first extraterrestrial home.

Power to the People John Wiley & Sons

In her latest, radio personality and author Ingraham (Shut up and Sing) calls on the American people to take back the phrase "Power to the People" from the anti-establishment groups of yesterday that, today, have made the country, according to Ingraham, "a slave to fringe groups, political correctness, expanding bureaucracies, and our own consumerism." Taking an approach that makes mutually exclusive groups out of those "working and taking care of their families" and the "protest culture," Ingraham's message is loud and clear: "they're

coming for you." Specifically, "they" means the Lifetime network (brainwashing women to "swear off men and family"), the growing ranks of "Team Atheist" (including Dan Brown), "family deconstructivists," illegal immigrants and Islamic jihadists, among others. Chapters cover most of today's hot button topics—the war in Iraq, homeland security, the judiciary, the news media and global warming—with attitude and conviction. Ingraham's commentary on the lack of education in our schools and the "pornification" of the culture contain her most sound, articulate arguments (bolstered by a wealth of statistics), but Ingraham's assembling tactics are overzealous; still, fans of her strident radio show should be pleased to find more of the same here.

The *Early Mathematics of Leonhard Euler* gives an article-by-article description of Leonhard Euler's early mathematical works; the 50 or so mathematical articles he wrote before he left St. Petersburg in 1741 to join the Academy of Frederick the Great in Berlin. These early pieces contain some of Euler's greatest work, the Königsberg bridge problem, his solution to the Basel problem, and his first proof of the Euler-Fermat theorem. It also presents important results that we seldom realize are due to Euler; that mixed partial derivatives are (usually) equal, our $f(x)$ notation, and the integrating factor in differential equations. The book shows how contributions in diverse fields are related, how number theory relates to series, which, in turn, relate to elliptic integrals and then to differential equations. There are dozens of such strands in this beautiful web of mathematics. At the same time, we see Euler grow in power and sophistication, from a young student when at 18 he published his first work on differential equations (a paper with a serious flaw) to the most celebrated mathematician and scientist of his time. It is a portrait of the world's most exciting mathematics between 1725 and 1741, rich in technical detail, woven with connections within Euler's work and with the work of other mathematicians in other times and places, laced with historical context.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. How to Live on Mars

Writing is not just about conveying 'content' but also about the representation of self. (One of the reasons people find writing difficult is that they do not feel comfortable with the 'me' they are portraying in their writing. Academic writing in particular often poses a conflict of identity for students in higher education, because the 'self' which is inscribed in academic discourse feels alien to them.) The main claim of this book is that writing is an act of identity in which people align themselves with socio-culturally shaped subject positions, and thereby play their part in reproducing or challenging dominant practices and discourses, and the values, beliefs and interests which they embody. The first part of the book reviews recent understandings of social identity, of the discursal construction of identity, of literacy and identity, and of issues of identity in research on academic writing. The main part of the book is based on a collaborative research project about writing and identity with mature-age students, providing: - a case study of one writer's dilemmas over the presentation of self;- a discussion of the way in which writers' life histories shape their presentation of self in writing;- an interview-based study of issues of ownership, and of accommodation and resistance to conventions for the presentation of self;- linguistic analysis of the ways in which multiple, often contradictory, interests, values, beliefs and practices are inscribed in discourse conventions, which set up a range of possibilities for self-hood for writers. The book ends with implications of the study for research on writing and identity, and for the learning and teaching of academic writing. The book will be of interest to students and researchers in the fields of social identity, literacy, discourse analysis, rhetoric and composition studies, and to all those concerned to understand what is involved in academic writing in order to provide wider access to higher education.

One of the last things Damian Stevens ever thought head do was author a novel. He is an accomplished professional entertainer with a rather cushy house gig. However, inspiration came to him during daily meditations and simply could not be ignored. Afternet.org came to him as a motion picture in his mind during these meditations, and so to write it, he simply tried his best to describe what he saw in the movie. He insists that at many times throughout the course of writing, the characters themselves required him to revise what they were to say, and even their biographical information. Of course, Damian complied. Besides being a sci-fi novel with an eerie sense of romance, it contains certain spiritual insights that are intended to inspire and enlighten the reader. Without revealing too much of the content, he leaves you with this message of hope: aIt is true that love never dies.a
