This comprehensive volume offers a snapshot profile of every public school district in the United States serving 2,500 or more students. You'll find important contact information for each school district (name, address, phone number and web site) plus Grades Served, the Numbers of Students and Teachers and the Number of Regular, Special Education, Alternative and Vocational Schools in the district. Also, The Comparative Guide to American Elementary & Secondary Schools provides statistics to help evaluate educational programs including Student/Classroom Teacher Ratios, Number of Librarians, Number of Guidance Counselors, District Expenditures per student and a National Socioeconomic Indicator for the District. A useful City Index lists all districts that operate schools in the city. These important comparative statistics are necessary for anyone considering relocation or researching a particular school district and would be a perfect acquisition for any public library.

Beginning in 1984, Eric Dinerstein led a team directly responsible for the recovery of the greater one-horned rhinoceros in the Royal Chitwan National Park in Nepal, where the population had once declined to as few as 100 rhinos. The Return of the Unicorns is an account of what it takes to save endangered large mammals. In its pages, Dinerstein outlines the multifaceted recovery program—structured around targeted fieldwork and scientific research, effective protective measures, habitat planning and management, public-awareness campaigns, economic incentives to promote local guardianship, and bold, uncompromising leadership—that brought these extraordinary animals back from the brink of extinction. In an age when scientists must also become politicians, educators, fund-raisers, and activists to safeguard the subjects that they study, Dinerstein's inspiring story offers a successful model for large-mammal conservation that can be applied throughout Asia and across the globe.

In this international collection of papers there is a wealth of knowledge on artificial intelligence (AI) and cognitive science (CS) techniques applied to the problem of providing help systems mainly for the UNIX operating system. The research described here involves the representation of technical computer concepts, but also the representation of how users conceptualise such concepts. The collection looks at computational models and systems such as UC, Yucca, and OSCON programmed in languages such as Lisp, Prolog, OPS-5, and C which have been developed to provide UNIX help. These systems range from being menu-based to ones with natural language interfaces, some providing active help, intervening when they believe the user to have misconceptions, and some based on empirical studies of what users actually do while using UNIX. Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do, and figuring out a way to do it, as well as representing the knowledge needed to do so. There is a significant focus on natural language dialogue where consultation systems can become active, incorporating user modelling, natural language generation and plan recognition, modelling metaphors, and users' mistaken beliefs. Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test-bed domain such as help on UNIX.

The main idea and the driver of further research in the area of face recognition are security applications and human-computer interaction. Face recognition represents an intuitive and non-intrusive method of recognizing people and this is why it became one of three identification methods used in e-passports and a biometric of choice for many other security applications. This goal of this book is to provide the reader with the most up to date research performed in automatic face recognition. The chapters presented use innovative approaches to deal with a wide variety of unsolved issues.

Have you ever dreamed of taking such incredible landscape photos that your friends and family say, "Wait a minute, this is your photo?! You took this?" Well, you're in luck. Right here, in this book, pro photographer and award-winning author Scott Kelby teaches you how to shoot and edit jaw-dropping landscape photographs. Scott shares all his secrets and time-tested techniques, as he discusses everything from his go-to essential gear and camera settings to the landscape photography techniques you need to create absolutely stunning images. From epic scenes at sunrise to capturing streams and waterfalls with that smooth, silky look, and from photographing the night sky or the Milky Way to creating breathtaking, sweeping panoramas, Scott has got you covered. Among many other topics, you'll learn: • The secrets to getting super-sharp, crisp images (without having to buy a new lens). • Exactly which camera settings work best for landscape photography and why (and which ones you should avoid). • Where to focus your camera for tack-sharp images from foreground to background. • How to shoot beautiful high dynamic range images and stunning panoramas (and even HDR panos!), along with how to post-process them like a pro. • How to create captivating long-exposure landscape shots that wow your viewers. • What gear you need, what gear you can skip, which accessories work best, and a ton of killer tips that will not only help you create better images, but make the entire experience that much more fun. It's all here, from the planning, to the shoot, to the post-processing—taking your images from flat to fabulous—and best of all, it's just one topic per page, so you'll get straight to the info you need fast. Many people think of Linux as a computer operating system, running on users' desktops and powering servers. But Linux can also be found inside many consumer electronics devices. Whether they're the brains of a cell phone, cable box, or exercise bike, embedded Linux systems blur the distinction between computer and device. Many makers love microcontroller platforms such as Arduino, but as the complexity increases in their projects, they need more power for applications, such as computer vision. The BeagleBone is an embedded Linux board for makers. It's got built-in networking, many inputs and outputs, and a fast processor to handle demanding tasks. This book introduces you to both the original BeagleBone and the new BeagleBone Black and gets you started with projects that take advantage of the board's processing power and its ability to interface with the outside world.

The first six chapters of the text examine four broad issues: the role of the Internet in fostering competition, its impact on price dispersion and on business-to-business transactions, and the importance of reputation and trust in the new economy. The last four chapters examine the impact of the Internet on the organization of firms, the efficiency of auctions in the Internet age, how consumers choose websites and acquire product information, and the growing problem of congestion on the Internet.

Writing is not just about conveying 'content' but also about the representation of self. (One of the reasons people find writing difficult is that they do not feel comfortable with the 'me' they are portraying in their writing. Academic writing in particular often poses a conflict of identity for students in higher education, because the 'self' which is inscribed in academic discourse feels alien to them.)The main claim of this book is that writing is an act of identity in which people align themselves with socio-culturally shaped subject positions, and thereby play their part in reproducing or challenging dominant practices and discourses, and the values, beliefs and interests which they embody. The first part of the book reviews recent understandings of social identity, of the discursal construction of identity, of literacy and identity, and of issues of identity in research on academic writing. The main part of the book is based on a collaborative research project about writing and identity with mature-age students, providing: - a case study of one writer's dilemmas over the presentation of self;- a discussion of the way in which writers' life histories shape their presentation of self in writing;- an interview-based study of issues of ownership, and of accommodation and resistance to conventions for the presentation of self;- linguistic analysis of the ways in which multiple, often contradictory, interests, values, beliefs and practices are inscribed in discourse conventions, which set up a range of possibilities for self-hood for writers.The book ends with implications of the study for research on writing

and identity, and for the learning and teaching of academic writing. The book will be of interest to students and researchers in the fields of social identity, literacy, discourse analysis, rhetoric and composition studies, and to all those concerned to understand what is involved in academic writing in order to provide wider access to higher education.
