Today's successful cinematographer must be equal parts artist, technician, and business-person. The cinematographer needs to

master the arts of lighting, composition, framing and other aesthetic considerations, as well as the technology of digital cameras, recorders, and workflows, and must know how to choose the right tools (within their budget) to get the job done. David Stump's Digital Cinematography focuses on the tools and technology of the trade, looking at how digital cameras work, the ramifications of choosing one camera versus another, and how those choices help creative cinematographers to tell a story. This book empowers the reader to correctly choose the appropriate camera and workflow for their project from today's incredibly varied options, as well as understand the ins and outs of implementing those options. Veteran ASC cinematographer David Stump has updated this edition with the latest technology for cameras, lenses, and recorders, as well as

---

included a new section on future cinematographic trends. Ideal for advanced cinematography students as well as working professionals looking for a resource to stay on top of the latest trends, this book is a must read.

Caught by the Collar

is an attempt to shed light on the inaccuracies and inefficiencies in the teachings and methodology of teaching in the Pentecostal church.

In too many instances, sincere followers of Christ are lost in a quagmire of unanswered questions and errant doctrine.

They end up with stunted or stagnant growth and sometimes turn away from Christ altogether.

In many cases, these errors and confused teachings can be directly connected with the ideas that

---

the Bible is confusing or contradictory. It is unfortunate that for so many years so many church leaders have either failed to recognize this issue or have intentionally chosen not to address it. In fact, holding on to and continuing to teach ideology and principles that are out of line with scriptures sounds suspiciously like teaching "another gospel," which the Bible specifically speaks against. As a lifetime member of this denomination, Eugene Akins has personally experienced the confusion caused when scripture is misinterpreted, the failure that occurs when scripture is not implemented, and the heartbreak that is precipitated by so many clergymen who should be in some other line of work. Many of the members of these churches are caught in what they have been told versus what they know and understand. They are caught in traditions and hand-me-down word bites versus the truth of the scriptures, and when the clergy is primarily responsible for all this clutter, church members are caught by the collar.

Much has been written about the use of tanks in battle. Little, however, has appeared about the gunnery systems that are at their core. This book describes and examines the main gun systems of

---

medium and heavy tanks from first use in 1916 in World War I to those fielded in numbers to the end of World War II in 1945, including tanks of the interwar period. Specifically considered are guns of a caliber greater than 35 mm, which have been deployed in numbers greater than 100. The emphasis is on guns mounted in turrets on heavier tracked armored fighting vehicles (greater than 15 tonnes) which were considered tanks. There are, though, exceptions, in that the naval 6 pounder guns in First World War British tanks, as well as the 75 mm guns in French medium tanks of the same period (all turretless) are included. The treatment of gun systems includes sighting and fire control equipment, gun laying equipment, mounts and the array of munitions fired, as well as the actual gun, including its, barrel, cradle, breech, firing mechanism, sights and recoil system. Related to this are issues of gun handling (loading and unloading), ammunition design and rates of fire.

---

Also examined are the maximum impulse and energy generated by firing some of the munitions available that must be absorbed by the gun recoil system.
