First performed in a hit off-off-Broadway production, and soon to be a film starring Sigourney Weaver and Anthony LaPaglia, *The Guys* is a timeless drama about the surprising truths people can discover in ordinary lives, and the connections we make with others and ourselves in times of tragedy. Paralyzed by grief and unable to put his thoughts into words, Nick, a fire captain, seeks out the help of a writer to compose eulogies for the colleagues and friends he lost in the catastrophic events of September 11, 2001. As Joan, an editor by trade, draws Nick out about "the guys," powerful profiles emerge, revealing vivid personalities and the substance and meaning that lie beneath the surface of seemingly unremarkable people. As the individual talents and enthusiasms of the people within the small firehouse community are realized, we come to understand the uniqueness and value of what each person has to contribute. And Nick and Joan, two people who under normal circumstances never would have met, jump the well-defined tracks of their own lives, and so learn about themselves, about life, and about the healing power of human connection, through talking about the guys.

This proceedings is a collection of 46 selected papers that were presented at the 12th International Wheat Genetics Symposium (IWGS). Since the launch of the wheat genome sequencing project in 2005, the arrival of draft genome sequences has marked a new era in wheat genetics and genomics, catalyzing rapid advancement in the field. This book provides a comprehensive review of the forefront of wheat research, across various important topics such as germplasm and genetic diversity, cytogenetics and allopolyploid evolution, genome sequencing, structural and functional genomics, gene function and molecular biology, biotic stress, abiotic stress, grain quality, and classical and molecular breeding. Following an introduction, 9 parts of the book are dedicated to each of these topics. A final, 11th part entitled "Toward Sustainable Wheat Production" contains 7 excellent papers that were presented in the 12th IWGS Special Session supported by the OECD. With rapid population growth and radical climate changes, the world faces a global food crisis and is in need of another Green Revolution to boost yields of wheat and other widely grown staple crops. Although this book focuses on wheat, many of the newly developed techniques and results presented here can be applied to other plant species with large and complex genomes. As such, this volume is highly recommended for all students and researchers in wheat sciences and related plant sciences and for those who are interested in stable food production and food security.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare

had come of age, exactly as he had forecast.

This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

It's 1897. Gold has been discovered in the Yukon. New York is under the sway of Hearst and Pulitzer. And in a few months, an American battleship will explode in a Cuban harbor, plunging the U.S. into war. Spanning five years and half a dozen countries, this is the unforgettable story of that extraordinary moment: the turn of the twentieth century, as seen by one of the greatest storytellers of our time. Shot through with a lyrical intensity and stunning detail that recall Doctorow and Deadwood both, *A Moment in the Sun* takes the whole era in its sights—from the white-racist coup in Wilmington, North Carolina to the bloody dawn of U.S. interventionism in the Philippines. Beginning with Hod Brackenridge searching for his fortune in the North, and hurtling forward on the voices of a breathtaking range of men and women—Royal Scott, an African American infantryman whose life outside the military has been destroyed; Diosdado Concepción, a Filipino insurgent fighting against his country's new colonizers; and more than a dozen others, Mark Twain and President McKinley's assassin among them—this is a story as big as its subject: history rediscovered through the lives of the people who made it happen.

Ecohydrology of Water-Controlled Ecosystems addresses the connections between the hydrologic cycle and plant ecosystems, with special emphasis on arid and semi-arid climates. This important topic is treated by building suitable mathematical models of the physics involved and then applying them to study the ecosystem structure and its response to rainfall and climate forcing in different parts of the world, including savannas, grasslands and forests. It investigates the vegetation response to water stress (drought), the hydrologic control on cycles of soil nutrients, and the dynamics of plant competition for water. The book also offers insights into processes closely related to soil moisture dynamics, such as soil-atmosphere interaction and soil gas emissions. This book will appeal to advanced students and researchers from a large range of disciplines, including environmental science, hydrology, ecology, earth science, civil and environmental engineering, agriculture and atmospheric science.

Professor Wells argues that there was no historical Jesus, and in thus arguing he deals with the many recent writers who have interpreted the historical Jesus as some kind of political figure in the struggle against Rome, and calls in evidence the many contemporary theologians who agree with some of his arguments about early Christianity. The question at issue is what all the evidence adds up to. Does it establish that Jesus did or did not exist? Professor Wells concludes that the latter is the more likely hypothesis. This challenge to received thinking by both Christians and non-Christians is supported by much documentary evidence, and Professor Wells carefully examines all the relevant problems and answers all the relevant questions. He deliberately avoids polemic and speculation, and sticks so far as possible to the known facts and to rational inferences from the facts.

Acceptance or rejection of any edible commodity, whether it is raw or processed, is usually conditioned by sensory stimuli. The impact of these stimuli on the decision-making process is broadly termed sensory evaluation. Advances in sensory evaluation research have been slow in the past because of the human factor—the necessity to use highly trained sensory panels to conduct this research. High technology instrumentation and new understandings of sensory evaluations are now combining to make possible quantum jumps forward in sensory evaluation research. It is widely recognized that the sensory aspects of fruits and vegetables are affected by many factors, among them environment, variety, cultural practices, and handling practices. However, if one attempts to find a general reference or compilation of findings regarding this subject area there seems to be few, if any, available. A survey of the literature does suggest that in the past few years research into specific factors which influence the sensory aspects of fruits and vegetables has increased significantly. This increased interest in sensory research and the renewed national awareness of the value of research into pre and postharvest quality of fruits and vegetables prompted the Flavor Subdivision, Agricultural and Food Chemistry Division, American Chemical Society to sponsor a symposium entitled "Sensory Evaluation of Fruits and Vegetables: Effect of Environment, Cultural Practices and Variety" during the 1982 meeting in Kansas City, Missouri.
