It ' s 1897. Gold has been discovered in the Yukon. New York is under the sway of Hearst and Pulitzer. And in a few months, an American battleship will explode in a Cuban harbor, plunging the U.S. into war. Spanning five years and half a dozen countries, this is the unforgettable story of that extraordinary moment: the turn of the twentieth century, as seen by one of the greatest storytellers of our time. Shot through with a lyrical intensity and stunning detail that recall Doctorow and Deadwood both, *A Moment in the Sun* takes the whole era in its sights—from the white racist coup in Wilmington, North Carolina to the bloody dawn of U.S. interventionism in the Philippines. Beginning with Hod Brackenridge searching for his fortune in the North, and hurtling forward on the voices of a breathtaking range of men and women—Royal Scott, an African American infantryman whose life outside the military has been destroyed; Diosdado Concepc í on, a Filipino insurgent fighting against his country ' s new colonizers; and more than a dozen others, Mark Twain and President McKinley ' s assassin among them—this is a story as big as its subject: history rediscovered through the lives of the people who made it happen.

Ecohydrology of Water-Controlled Ecosystems addresses the connections between the hydrologic cycle and plant ecosystems, with special emphasis on arid and semi-arid climates. This important topic is treated by building suitable mathematical models of the physics involved and then applying them to study the ecosystem structure and its response to rainfall and climate forcing in different parts of the world, including savannas, grasslands and forests. It investigates the vegetation response to water stress (drought), the hydrologic control on cycles of soil nutrients, and the dynamics of plant competition for water. The book also offers insights into processes closely related to soil moisture dynamics, such as soil-atmosphere interaction and soil gas emissions. This book will appeal to advanced students and researchers from a large range of disciplines, including environmental science, hydrology, ecology, earth science, civil and environmental engineering, agriculture and atmospheric science.

This book looks at the link between voters and political party systems in Asian democracies, focusing on India, Indonesia, Korea and the Philippines. It discusses this link in terms of three distinct elements: the formation of voters preferences, the translation of preferences into votes, and the translation of votes into seats. The book goes on to discuss how far the general rules of political party systems and their underlying causal mechanisms such as strategic voting are apparent in these Asian democracies. In particular, it explores the extent to which electoral rules and social structural variables affect the process of transforming preferences into a political party system within the context of Asian politics. The extensive areas covered by the book overcome the traditional sub-regional division of Asia, namely, East, Southeast and South Asia.

Roger Ebert's *I Hated Hated Hated This Movie*, which gathered some of his most scathing reviews, was a best-seller. This new collection continues the tradition, reviewing not only movies that were at the bottom of the barrel, but also movies that he found underneath the barrel. From Roger's review of *Deuce Bigalow: European Gigolo* (0 stars): "The movie created a spot of controversy in February 2005. According to a story by Larry Carroll of MTV News, Rob Schneider took offense when Patrick Goldstein of the Los Angeles Times listed this year's Best Picture nominees and wrote that they were 'ignored, unloved, and turned down flat by most of the same studios that . . . bankroll hundreds of sequels, including a follow-up to *Deuce Bigalow: Male Gigolo*, a film that was sadly overlooked at Oscar time because apparently nobody had the foresight to invent a category for Best Running Penis Joke Delivered by a Third-Rate Comic.' Schneider retaliated by attacking Goldstein in full-page ads in *Daily Variety* and the *Hollywood Reporter*. In an open letter to Goldstein, Schneider wrote: 'Well, Mr. Goldstein, I decided to do some research to find out what awards you have won. I went online and found that you have won nothing. Absolutely nothing. No journalistic awards of any kind. . . . Maybe you didn't win a Pulitzer Prize because they haven't invented a category for Best Third-Rate, Unfunny

Pompous Reporter Who's Never Been Acknowledged by His Peers. . . ' Schneider was nominated for a 2000 Razzie Award for Worst Supporting Actor, but lost to Jar-Jar Binks. But Schneider is correct, and Patrick Goldstein has not yet won a Pulitzer Prize. Therefore, Goldstein is not qualified to complain that Columbia financed *Deuce Bigalow: European Gigolo* while passing on the opportunity to participate in *Million Dollar Baby*, *Ray*, *The Aviator*, *Sideways*, and *Finding Neverland*. As chance would have it, I have won the Pulitzer Prize, and so I am qualified. Speaking in my official capacity as a Pulitzer Prize winner, Mr. Schneider, your movie sucks."

Starting from concrete examples in Geomorphology, this comprehensive textbook explains to graduate and postgraduate students, point-cloud data technology and associated methods from acquisition to final-product generation. In the last few decades, Geo-sciences have experienced a paradigm shift from the challenge of collecting enough data to the need of creating new processing tools that can handle the billions of data. This shift has come to Geomorphology with the increasing use of surface-pointclouds obtained from photogrammetry, laser scanners and processed by specialist software, and it is thus necessary for the next generation of geomorphologist to be fluent in these technologies. Consequently, this book explains from concrete examples how to use pointcloud technologies, from data collection to processing and final product generation. The philosophy of this book relies on two principles, first: you do not have to be a tech-wizard to use pointcloud technologies, allowing the you to bring back the focus on your science; second pointcloud methods can be affordable, therefore the book provide a set of worked-examples in the different geomorphological environments using open source software and R and Python code samples. The book can be used as a textbook in a geomorphology, geology, physical geography, Sabo-sciences and engineering class, as well as a companion for the more seasoned scientist who wants to solve specific problems.

Professor Wells argues that there was no historical Jesus, and in thus arguing he deals with the many recent writers who have interpreted the historical Jesus as some kind of political figure in the struggle against Rome, and calls in evidence the many contemporary theologians who agree with some of his arguments about early Christianity. The question at issue is what all the evidence adds up to. Does it establish that Jesus did or did not exist? Professor Wells concludes that the latter is the more likely hypothesis. This challenge to received thinking by both Christians and non-Christians is supported by much documentary evidence, and Professor Wells carefully examines all the relevant problems and answers all the relevant questions. He deliberately avoids polemic and speculation, and sticks so far as possible to the known facts and to rational inferences from the facts.
