An illustrated tour of the elegant entrances to New York City's most celebrated apartment houses This handsome, oversized book introduces us to the grandest entrances of New York City's residential buildings. These posh portals come in an array of forms and styles, such as the porte cochere,

with a passage to admit carriages or motor cars; the classic awning, originally meant to be retracted in good weather; and Neoclassical, Romanesque, and Gothic revivals. Architectural historian Andrew Alpern highlights approximately 140 entrances, from the nineteenth century to the present, including those of the Dakota, the first true luxury apartment house in New York; San Remo, one of Central Park West's most impressive apartment houses; and the Ansonia, at one time the largest hotel in the world. Each entrance is accompanied by a description of its signal features and the history of the building that surrounds it. All are represented in splendid color photographs, and many by charming watercolor drawings. These ornate entrances offer a glimpse into New York's past, as well as its future—for today, once again, entryways have begun to feature heavily in the marketing of residential buildings. Posh Portals will be an inspiration for architects and a delight for city dwellers.

Self-healing is a well-known
phenomenon in nature: a
broken bone merges after
some time and if skin is
damaged, the wound will
stop bleeding and heals
again. This concept can be
mimicked in order to create
polymeric materials with the
ability to regenerate after
they have suffered
degradation or wear.

Already realized
applications are used in
aerospace engineering, and
current research in this
fascinating field shows how
different self-healing
mechanisms proven
successful by nature can be
adapted to produce even
more versatile materials.

The book combines the
knowledge of an
international panel of
experts in the field and
provides the reader with
chemical and physical
concepts for self-healing
polymers, including aspects
of biomimetic processes of
healing in nature. It shows
how to design self-healing
polymers and explains the

dynamics in these systems. Different self-healing concepts such as encapsulated systems and supramolecular systems are detailed. Chapters on analysis and friction detection in self-healing polymers and on applications round off the book.

Microorganisms in Foods 8: Use of Data for Assessing Process Control and Product Acceptance is written by the International Commission on Microbiological Specifications for Foods with assistance from a limited number of consultants. The purpose of this book is to provide guidance on appropriate testing of food processing environments, processing lines, and finished product to enhance the safety and microbiological quality of the food supply.

Microorganisms in Foods 8 consists of two parts. Part I, Principles of Using Data in Microbial Control, builds on the principles of Microorganisms in Foods 7: Microbiological Testing in Food Safety Management (2002), which illustrates how HACCP and Good Hygienic Practices (GHP) provide greater assurance of safety than microbiological testing, but also identifies circumstances where microbiological testing may play a useful role. Part II, Specific Applications to Commodities, provides practical examples of criteria and other tests and is an updated and expanded version of Part II of Microorganisms in Foods 2: Sampling for Microbiological Analysis: Principles and Specific Applications (2nd ed. 1986). Part II also builds on the 2nd edition of Microorganisms in Foods 6: Microbial Ecology of Food Commodities (2005) by identifying appropriate tests to evaluation the effectiveness of controls. *Food Photography & Lighting* Mosby Incorporated

With the popularity of food blogs and photography how-tos, it's tempting to think that anyone can photograph food, but it's another thing entirely to shoot for a tight ad layout with the pressure of your client watching over your shoulder. Commercial food photographer Teri Campbell has been called a "lighting master," and in this beautifully illustrated book, he not only shares his detailed lighting setups and shooting techniques for a wide range of food and drink shots, but also offers candid advice on how to set up a studio, use the right equipment, market your work, find clients, bid on assignments, hire food and prop stylists, and communicate effectively with everyone on the set. Campbell shares his expertise on dozens of commercial assignments—from shooting beignets on location in New Orleans, to creating perfect ice

tea pours, to photographing beans on real flames in his studio. Learn how he creates dynamic compositions, uses studio strobes, and arranges light diffusers, reflectors, fill cards, and mirrors, to create the perfect capture. Campbell also discusses his post-processing techniques in Adobe Camera Raw and Adobe Photoshop to create images that are irresistible. With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital

cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.
