Dental Composite Materials for Direct Restorations Butterworth-Heinemann

This book covers both basic scientific and clinically relevant aspects of dental composite materials with a view to meeting the needs of researchers and practitioners. Following an introduction on their development, the composition of contemporary composites is analyzed. A chapter on polymerization explains the setting reactions and light sources available for light-cured composites. The quality of monomer-to-polymer conversion is a key factor for material properties. Polymerization shrinkage along with the associated stress remains among the most challenging issues regarding composite restorations. A new classification of dental composites is proposed to offer more clinically relevant ways of differentiating between commercially available materials. A review of specific types of composites provides an insight into their key issues. The potential biological issues of dental composites are reviewed in chapters on elution of leachable substances and cariogenicity of resin monomers. Clinical sections focus on material placement, finishing procedures, and the esthetics and clinical longevity of composite restorations. Bonding to tooth tissues is addressed in a separate chapter, as is the efficiency of various composite repair methods. The final chapter discusses future perspectives on dental composite materials.

David Busch's Compact Field Guide for the Canon EOS Rebel T3/1100D John Wiley & Sons

This is the must-have guide for all amateur astronomers who double as makers, doers, tinkerers, problem-solvers, and inventors. In a world where an amateur astronomy habit can easily run into the many thousands of dollars, it is still possible for practitioners to get high-quality results and equipment on a budget by utilizing DIY techniques. Surprisingly, it's not that hard to modify existing equipment to get new and improved usability from older or outdated technology, creating an end result that can outshine the pricey higher-end tools. All it takes is some elbow grease, a creative and open mind and the help of Chung's hard-won knowledge on building and modifying telescopes and cameras. With this book, it is possible for readers to improve their craft, making their equipment more user friendly. The tools are at hand, and the advice on how to do it is here. Readers will discover a comprehensive presentation of astronomical projects that any amateur on any budget can replicate - projects that utilize leading edge technology and techniques sure to invigorate the experts and elevate the less experienced. As the "maker" community continues to expand, it has wonderful things to offer amateur astronomers with a willingness to get their hands dirty. Tweaking observing and imaging equipment so that it serves a custom purpose can take your observing options to the next level, while being fun to boot.

It has been six years since the first edition of Easy Digital Negatives book was published. And during this time, the book has become one of the most popular manuals for making transparent digital negatives. And, thanks for the trust. The second edition is a rather extended version of the first book. As in the first edition, it first thoroughly explains to you all the necessary knowledge about digital negatives for alternative photography and then explains both manual and computer procedures for making negatives step by step. And why should you read a book?: -The quality of photos is greatly increased by using the EasyDigitalNegatives system.-The process is extremely fast and allows you to make quality negatives and photos after the first few attempts.-The production is so simple that it is easily understood and used by any amateur or professional photographer or printer.-There will

be a lot of videos available soon.-The results of corrected transparent digital negatives are reliable.-And you can use any printer to make transparent digital negatives using EasyDigitalNegatives, not just some of the most expensive inkjet printers.-You can use almost all operating systems and image processing programs.-And above all, EasyDigitalNegatives is an extremely widespread system, so you can be helped by many selfless users in case of any problems (you never know). But by purchasing this book, you will probably also become a master of making transparent digital negatives for alternative and historical photography. So don't worry, because the solution is almost at hand this time as well.

The Wittich Connection Lark Books (NC)

This book discusses analysis and design techniques for linear feedback control systems using MATLAB® software. By reducing the mathematics, increasing MATLAB working examples, and inserting short scripts and plots within the text, the authors have created a resource suitable for almost any type of user. The book begins with a summary of the properties of linear systems and addresses modeling and model reduction issues. In the subsequent chapters on analysis, the authors introduce time domain, complex plane, and frequency domain

techniques. Their coverage of design includes discussions on model-based controller designs, PID controllers, and robust control designs. A unique aspect of the book is its inclusion of a chapter on fractional-order controllers, which are useful in control engineering practice.

Experts in research, industry, and academia present the latest developments in technology, describe applications involving cutting-edge communication and computer systems, and explore likely future trends. In addition, a wealth of new algorithms that assist in solving computer and communication engineering problems are presented. The book is based on presentations given at ICOCOE 2015, the 2nd International Conference on Communication and Computer Engineering. It will appeal to a wide range of professionals in the field, including telecommunication engineers, computer engineers and scientists, researchers, academics and students.

[Code of Good Practices on Fiscal Transparency, revised April 2007](#) Springer

The IMF has revised its Code of Good Practices on Fiscal Transparency, following a public consultation process. Nine new practices have been added to the Code and many existing practices have been broadened in scope. The four pillars of the original Code remain unchanged: clarity of roles and responsibilities, open budget processes, public availability of information and assurances of integrity. The revised Code will be used in IMF surveillance and in voluntary assessments of fiscal transparency in member countries under the standards and codes initiative. Two associated documents - the Manual on Fiscal Transparency (2007) and the Guide on Resource Revenue Transparency (2007) - provide supporting in-depth coverage of good practices.

This report contains a selection of contributed papers and presentations from a conference attended by 270 educators and media workers committed to formulate a vision for media education in South Africa. Pointing out that media education has been variously described in South Africa as visual literacy, mass media studies, teleliteracy, and film studies, or as dealing with educational technology or educational media, the introduction cites a definition of media education as an exploration of contemporary culture alongside more traditional literary texts. It is noted that this definition raises issues for education as a whole, for traditional language study, for media, for communication, and for understanding the world. The 37 selected papers in this collection are presented in seven categories: (1) Why Media Education? (keynote paper by Bob Ferguson); (2) Matters Educational (10 papers on media education and visual literacy); (3) Working Out How Media Works (4 papers on film studies, film technology, and theory); (4) Creating New Possibilities for Media Awareness (9 papers on film and television and 4 on print media); (5) Training and Empowering (2 papers focusing on teachers and 4 focusing on training producers); (6) Media Developing Media Awareness (2 papers); and (7) Afterthoughts (1 paper). Appendices include the Unesco Declaration on Media Education (1982), Recommendations from the Toulouse Colloquy on New Directions in Media Education (1990), and

Resolutions and Conclusions of the First National Media Education Conference (Durban, 1990). Most of the papers provide their own bibliographies. (DB)
