This book summarizes the key adaptations enabling extremophile fishes to survive under harsh environmental conditions. It reviews the most recent research on acidic, Antarctic, cave, desert, hypersaline, hypoxic, temporary, and fast-flowing habitats, as well as naturally and anthropogenically toxic waters, while pointing out generalities that are evident across different study systems. Knowledge of the different adaptations that allow fish to cope with stressful environmental conditions furthers our understanding of basic physiological, ecological, and evolutionary principles. In several cases, evidence is provided for how the adaptation to extreme environments promotes the emergence of new species. Furthermore, a link is made to conservation biology, and how human activities have exacerbated existing extreme environments and created new ones. The book concludes with a discussion of major open questions in our understanding of the ecology and evolution of life in extreme environments.

This book by internationally known writer, composer, teacher and lecturer Seymour Bernstein expounds upon topics touched on in his bestseller *With Your Own Two Hands* (HL50482589). Bernstein teaches readers the truth about performing careers, offering insights and advice on both personal and musical issues. In Part 2, he discusses the importance of music education, covering both "monster" and "angel" teachers, managers and critics. Bernstein believes that everyone has a right to develop whatever talent they have, for self-fulfillment and self-development, if not necessarily for a career.

Behavioural observations from both the field and captivity indicate that same-sex sexual interactions are widespread throughout the animal kingdom, and occur quite frequently in certain non-human species. Proximate studies of these phenomena have yielded important insights into genetic, hormonal and neural correlates. In contrast, there has been a relative paucity of research on the evolutionary aspects. Homosexual Behaviour in Animals seeks to readdress this imbalance by exploring animal same-sex sexual behaviour from an evolutionary perspective. Contributions focus on animals that routinely engage in homosexual behaviour and include birds, dolphin, deer, bison and cats, as well as monkey and apes, such as macaques, gorillas and bonobos. A final chapter looks at human primates. This book will appeal to graduate students and researchers in evolutionary biology, biological anthropology, zoology, evolutionary psychology, animal behaviour and anyone interested in the current state of knowledge in this area of behavioural studies.

Twenty years in the making by a distinguished dolphin expert and his associates, The Hawaiian Spinner Dolphin is the first comprehensive scientific natural history of a dolphin species ever written. From their research camp at Kealakekua Bay in Hawaii, these scientists followed a population of wild spinner dolphins by radiotracking their movements and, with the use of a windowed underwater vessel, observing the details of their underwater social life. The authors begin with a description of the spinner

dolphin species, its morphology and systematics, and then examine the ocean environment, the organization of dolphin populations, and the way this school-based society of mammals uses shorelines for rest and instruction of the young. The dolphins' reproductive cycle, their vision, vocalization, hearing, breathing, and feeding, and the integration of the school are carefully analyzed. The authors conclude with a comprehensive evolutionary analysis of this marine cultural system, with its behavioral flexibility and high levels of cooperation. This absorbing book is the richest source available of new scientific insights about the lives of wild dolphins and how their societies evolved at sea.

Expertly translated and updated from the original French, Audition offers a broad, detailed, and up-to-date treatment of the physiology of hearing. It includes a substantial section on auditory psychophysics as well as brief introductions to physical acoustics, musical acoustics, anatomy, and clinical topics. The book's clear, direct style and its more than 180 well-chosen, informative, and easily understood figures make it accessible not only to upper-level undergraduate and graduate students in the basic and clinical neurosciences but also to students in professional training programs such as otolaryngology or audiology. Audition is divided into three major sections. The first concerns the psychophysics of hearing and covers nonlinear phenomena, perception of complex tones, and musical scales. The second covers the anatomy and physiology of the ear, beginning with data from earlier and more recent studies of auditory-nerve fibers, proceeding to cochlear mechanics, and ending with current findings regarding cochlear transduction. The third deals with the central nervous system, detailing aspects of the auditory pathway and including a useful section on the relationship between auditory psychophysics and current neurophysiological research. Audition concludes with appendixes on deafness and evoked potentials and a comprehensive bibliography. Pierre Buser is Professor in the Department of Comparative Neurophysiology at the Universite Pierre et Marie Curie in Paris. Michel Imbert is Professor in the Department of Visual Neuroscience, also at the Universite Pierre et Marie Curie. R. H. Kay is Emeritus Fellow of Keble College, Oxford.

The bestselling author of *Merle's Door* offers a "moving, pictorial love story" of man and his new best friend—full of dog care knowledge and insight (People). After Ted Kerasote's beloved dog Merle passed, the author received thousands of emails asking two questions: "Have you gotten another dog?" and "Are you writing a new book?" Now, the bestselling canine lover answers both, in the most heartwarming way. Told in Pukka the pup's charming voice and accompanied by more than 200 photos, *Pukka: The Pup After Merle* tells the story of how Ted found Pukka. It recounts the early days of their bonding as they explored both Ted's hometown of Kelly, Wisconsin, and the wider world. As walks become hikes and hikes become climbs, pup and man's adventures culminate in a rugged wilderness journey that teaches both Pukka and Ted something new about the dog-human partnership. Filled with stunning images of the West—and adorable pictures of Pukka—this book also shares Ted's in-depth research on the best food, toys, and medical choices he could provide to ensure that Pukka would live the longest, healthiest life possible. "Glimpses of Pukka's charmed life are interwoven with vast amounts of important information . . . that [encourage] you to draw your own conclusions and make the best choices for you and your dog." —The Bark

A new land has been discovered to the east. Winterkeep is a land of miracles, a democratic republic run by people who like each other, where people speak to telepathic sea creatures, adopt telepathic foxes as pets, and fly across the sky in ships attached to balloons. But when Bitterblue's envoys to Winterkeep drown under suspicious circumstances, she and Giddon and her half-sister, Hava, set off to discover the truth--putting both Bitterblue's life and Giddon's heart to the test when Bitterblue is kidnapped. Giddon believes she has drowned, leaving him and Hava to solve the mystery of what's wrong in Winterkeep. Lovisa Cavenda is the teenage daughter of a powerful Scholar and Industrialist (the opposing governing parties) with a fire inside her that is always hungry, always just nearly about to make something happen. She is the key to everything, but only if she can figure out what's going on before anyone else, and only if she's willing to transcend the person she's been all her life.
