Both seasoned and beginning investigators will be amazed at the range and complexity of rat behavior as described in the 43 chapters of this volume. The behavioral descriptions are closely tied to the laboratory methods from which they were derived, thus allowing the investigator to exploit both the behavior and the methods for their own research. It will also serve as an indispensable reference for other neuroscientists, psychologist, pharmacologists, geneticists, molecular biologists, zoologists, and their students and trainees.

The first edition of this book in 2002 was

the first UK text to examine digital copyright together with related areas such as performers' rights, moral rights, database rights and competition law as a subject in its own right. Updated editions have included the UK implementation of the 2001 Information Society Directive and commentary on user-generated content and the development of Web 2.0 and beyond. Now in its fourth edition, the book has been updated and revised to take account of legal and policy developments in copyright law and related areas, in particular the increasing role of the Court of Justice of the European Union in shaping EU copyright law. The book helps put digital copyright law and policy into perspective and provides practical guidance for those creating or exploiting digital content or technology, whether in academia, the software, information,

publishing and creative industries, and other areas of the economy. The focus is on the specifics of the law in this area together with practical aspects, including precedents and precedent checklists dealing with common digital copyright transactions. The latest edition has been expanded to include a discussion of Open Access, eBooks and app development and licensing. Both academics and practitioners will find the book an invaluable guide to this rapidly developing field of law.

This work provides detailed coverage of the current state of international treaty law in respect of copyright issues relating to the Internet and E-commerce. The centre-piece of the book is an article-by-article analysis of

the two key World Intellectual Property Organisation (WIPO) treaties tackling the subject: the WIPO Copyright Treaty and the WIPO Performances and Phonograms Treaty, both negotiated primarily as a response to technological developments such as the Internet. It also includes detailed comparative material showing how the WIPO treaties are being implemented elsewhere in the world, and in particular how the EU, Japan and the US are responding to these key issues. This includes analysis of the key EU Directive on Copyright and Related Rights in the Information Society, which is intended to roll out protection across Europe for copyright holders operating in the digital arena.

The State of Play presents an essential first step in understanding how new digital worlds will change the future of our universe. Millions of people around the world inhabit virtual worlds: multiplayer online games where characters live, love, buy, trade, cheat, steal, and have every possible kind of adventure. Far more complicated and sophisticated than early video games, people now spend countless hours in virtual universes like Second Life and Star Wars Galaxies not to shoot space invaders but to create new identities, fall in love, build cities, make rules, and break them. As digital worlds become increasingly powerful and lifelike, people will employ them for countless real-world purposes, including commerce, education,

medicine, law enforcement, and military training. Inevitably, real-world law will regulate them. But should virtual worlds be fully integrated into our real-world legal system or should they be treated as separate jurisdictions with their own forms of dispute resolution? What rules should govern virtual communities? Should the law step in to protect property rights when virtual items are destroyed or stolen? These questions, and many more, are considered in The State of Play, where legal experts, game designers, and policymakers explore the boundaries of free speech, intellectual property, and creativity in virtual worlds. The essays explore both the emergence of law in multiplayer online games and how we can use virtual worlds to study real-world social interactions and

test real-world laws. Contributors include: Jack M. Balkin, Richard A. Bartle, Yochai Benkler, Caroline Bradley, Edward Castronova, Susan P. Crawford, Julian Dibbell, A. Michael Froomkin, James Grimmelman, David R. Johnson, Dan Hunter, Raph Koster, F. Gregory Lastowka, Beth Simone Noveck, Cory Ondrejka, Tracy Spaight, and Tal Zarsky.

Since 1958 the Maritime Administration

has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly

updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.

Hart
Publishing

Human rights issues arise more and more often in an intellectual property context. 'Intellectual property and human rights' is the first comprehensive analysis of this emerging nexus of legal issues. In twenty-one incisive essays, well-known authorities in both intellectual property law and human

rights law present in-depth analysis and discussion of such essential topics as the following:

- 0The human rights credentials of copyright and other intellectual property rights;
- 0The relations between copyright and freedom of speech and of expression, from the perspectives of both North American and European law;
- 0The relevance to copyright of the public interest defence in European law;
- 0The way trade marks and human rights interfere;
- 0The human rights and morality aspects of biotechnological patents and stem cell patents;
- 0The interaction between human rights and geographical indications; and
- 0The fundamental rights of privacy in an intellectual property environment.

0In the years to come, more and more lawyers will be confronted with issues involving the

interaction of intellectual property and human rights. As a groundbreaking work 'Intellectual property and human rights' will be seen as a cornerstone of the debate. Practitioners, academics and policymakers in both fields will immediately recognize its value as a springboard to the informed future development of this new and crucial area of legal theory and practice.

The Second Edition of this bestselling B2B marketing textbook offers the same accessible clarity of insight, combined with updated and engaging examples. Each chapter contains a detailed case study to further engage the reader with the topics examined. - Featuring updated case studies and a range of new examples. - Incorporating additional coverage of B2B branding and the B2B strategic marketing process, and issues of sustainability. - Extended coverage of Key Account Management - Online lecturer support including PowerPoint slides and key web links Drawing on their substantial experience of

business-to-business marketing as practitioners, researchers and educators, the authors make this exciting and challenging area accessible to advanced undergraduate and to postgraduate students of marketing, management and business studies. Praise for the Second Edition: 'I found that the first edition of Brennan, Canning and McDowell's text was excellent for raising students' awareness and understanding of the most important concepts and phenomena associated with B2B marketing. The second edition should prove even more successful by using several new case studies and short 'snapshots' to illustrate possible solutions to common B2B marketing dilemmas, such as the design and delivery of business products and services, the selection of promotional tools and alternative routes to market. The new edition also deals clearly with complex issues such as inter-firm relationships and networks, e-B2B, logistics, supply chain

management and B2B branding' - Michael Saren, Professor of Marketing, University of Leicester 'This textbook makes a unique contribution to business-to-business teaching: not only does it provide up-to-date cases and issues for discussion that reach to the heart of business-to-business marketing; it also brings in the latest academic debates and makes them both relevant and accessible to the readers. A fantastic addition to any library or course' - Dr Judy Zolkiewski, Senior Lecturer in Business-to-Business Marketing, Manchester Business School 'The advantage of the approach taken by Brennan and his colleagues is that this book manages to convey both the typical North American view of B2B marketing as the optimisation of a set of marketing mix variables, and the more emergent European view of B2B Marketing as being focused on the management of relationships between companies. This updated second edition sees

the addition of a number of 'snapshots' in each chapter that bring the subject alive through the description of current examples, as well as some more expansive end-of-chapter case studies. It is truly a most welcome addition to the bookshelves of those students and faculty interested in this facet of marketing' - Peter Naudé, Professor of Marketing, Manchester Business School 'The strength of this text lies in the interconnection of academic theory with real world examples. Special attention has been given to the role that relationships play within the Business-to business environment, linking these to key concepts such as segmentation, targeting and marketing communications, which importantly encompasses the role personal selling as relationshipcommunications building and not just order taking. With good coverage of international cultural differences this is a valuable resource for both students of

marketing and sales' - Andrew Whalley, Lecturer in Business-to-Business Marketing, Royal Holloway University of London 'The text provides an authoritative, up-to-date review of organisational strategy development and 'firmographic' market segmentation. It provides a comprehensive literature review and empiric examples through a range of relevant case studies. The approach to strategy formulation, ethics and corporate social responsibility are especially strong' - Stuart Challinor, Lecturer in Marketing, Newcastle University 'This revised second edition offers an excellent contemporary view of Business-to-Business Marketing. Refreshingly, the text is packed with an eclectic mix of largely European case studies that make for extremely interesting reading. It is a 'must read' for any undergraduate or postgraduate Marketing student' - Dr Jonathan Wilson, Senior Lecturer, Ashcroft International Business School, Anglia

Two Prisoners OUP Oxford

When Franz Kafka died in 1924, his loyal friend and champion Max Brod could not bring himself to fulfil Kafka's last instruction: to burn his remaining manuscripts. Instead, Brod devoted the rest of his life to canonizing Kafka as the most prescient chronicler of the twentieth century. By betraying Kafka's last wish, Brod twice rescued his legacy - first from physical destruction, and then from obscurity. But that betrayal also led to an international legal battle over which country could lay claim to Kafka's legacy: Germany, where Kafka's own sister perished in the Holocaust and where he would have suffered a similar fate had he remained, or Israel? At once a brilliant biographical portrait of Kafka and Brod and the influential group of writers and intellectuals known as the Prague Circle, Kafka's Last Trial offers a gripping account of the controversial

trial in Israeli courts - brimming with dilemmas legal, ethical, and political - that determined the fate of the manuscripts Brod had rescued when he fled with Kafka's papers at the last possible moment from Prague to Palestine in 1939. It describes a wrenching escape from Nazi invaders as the gates of Europe closed; of a love affair between exiles stranded in Tel Aviv; and two countries whose national obsessions with overcoming the traumas of the past came to a head in a fascinating and hotly contested trial. Ultimately, Benjamin Balint invites us to question: who owns a literary legacy - the country of one's language and birth or of one's cultural and religious affinities - and what nation can claim a right to it.

As technological developments multiply around the globe—even as the patenting

of human genes comes under serious discussion—nations, companies, and researchers find themselves in conflict over intellectual property rights (IPRs). Now, an international group of experts presents the first multidisciplinary look at IPRs in an age of explosive growth in science and technology. This thought-provoking volume offers an update on current international IPR negotiations and includes case studies on software, computer chips, optoelectronics, and biotechnology—areas characterized by high development cost and easy reproducibility. The volume covers these and other issues: Modern economic theory as a basis for approaching international IPRs. U.S. intellectual property practices versus those in Japan, India, the European Community, and the developing

and newly industrializing countries. Trends in science and technology and how they affect IPRs. Pros and cons of a uniform international IPRs regime versus a system reflecting national differences.
