This one family's journey across the unsettled West demonstrates how its understandings of family identity and selfhood were fostered. Beginning in the late 1880s, each member's perspective of the past and the future evolved as they moved from the Midwest to the West and finally settled in various regions of the United States. This chronicle of family movement and cultural assimilation contains an ideology of America that often frames stories told about family and history."

Costume defines the superhero, disguising and distinguishing him or her from the civilian alter ego. The often garish garb expresses a hero's otherness and empowers its wearers to seek a primal form of justice. This book provides the first interdisciplinary analysis of the superhero costume and investigates wide-ranging issues such as identity, otherness, ritual dress and disguise. Analysis focuses on the implications of wearing superhero costume, exploring interpretations of the costumed hero and the extent to which the costume defines his or her role. Using examples across various media (comic books, film, and television) with case studies including The X-Men, Watchmen, real-life superheroes such as Phoenix Jones and Pussy Riot, and audience activities such as cosplay, The Superhero Costume presents new perspectives on the increasingly popular genre. A lively and thorough account of superhero fashions throughout history, The Superhero Costume will be essential reading for students of visual culture, popular culture, fashion and cultural studies.

In this revealing comparative study, Mark Findlay examines the problematic nexus between undervalued labour and vulnerable migration status in dis-embedded markets. It highlights the frustrations raised by timeless regulatory failure and the chronic complicity of private property arrangements in delivering unsustainable market engagement. Mark Findlay identifies the challenge for normative and functional foundations of equitable governance, by repositioning regulatory principle, to restore dignity to market relations. The accountability of property through wider access and inclusion, it is argued, grounds commodified occupation as a vitally valuable social bond in which workers are empowered to participate rather than suffer exploitation. The comparative analysis of the EU and ASEAN regulatory contexts reveals that it is not simply more regulatory activity, but rather its reversion from market interests to human values, which will advance sustainability. Property, Labour and Legal Regulation offers an insightful, critical analysis of crucial contemporary issues facing social administrators, lawyers and policy makers working in the fields of migration, labour law and regulation. Its broad disciplinary coverage lends itself to students of law and regulation who will benefit from this unique evaluation of private property, labour relations and migration exclusivity.

This book, which is the first to be published in the emerging field of farm-level microsimulation, highlights the different methodological components of microsimulation modelling: hypothetical, static, dynamic, behavioural, spatial and macro – micro. The author applies various microsimulation-based methodological tools to farms in a consistent manner and, supported by a set of Stata codes, undertakes analysis of a wide range of farming systems from OECD countries. To these case studies, O' Donoghue incorporates farming policies such as CAP income support payments, agri-environmental schemes, forestry planting incentives and biomass incentives – in doing so, he illuminates the merits of microsimulation in this environment.

Central Peripheries explores post-Soviet Central Asia through the prism of nation-building. Although relative latecomers on the international scene, the Central Asian states see themselves as globalized, and yet in spite of – or perhaps precisely because of – this, they hold a very classical vision of the nation-state, rejecting the abolition of boundaries and the theory of the 'death of the nation'. Their unabashed celebration of very classical nationhoods built on post-modern premises challenges the Western view of nationalism as a dying ideology that ought to have been transcended by post-national cosmopolitanism. Marlene Laruelle looks at how states in the region have been navigating the construction of a nation in a post-imperial context where Russia remains the dominant power and cultural reference. She takes into consideration the ways in which the Soviet past has influenced the construction of national storylines, as well as the diversity of each state's narratives and use of symbolic politics. Exploring state discourses, academic narratives and different forms of popular nationalist storytelling allows Laruelle to depict the complex construction of the national pantheon in the three decades since independence. The second half of the book focuses on Kazakhstan as the most hybrid national construction and a unique case study of nationhood in Eurasia. Based on the principle that only multidisciplinary can help us to untangle the puzzle of nationhood, Central Peripheries uses mixed methods, combining political science, intellectual history, sociology and cultural anthropology. It is inspired by two decades of fieldwork in the region and a deep knowledge of the region's academia and political environment. Praise for Central Peripheries 'Marlene Laruelle paves the way to the more focused and necessary outlook on Central Asia, a region that is not a periphery but a central space for emerging conceptual debates and complexities. Above all, the book is a product of Laruelle's trademark excellence in balancing

empirical depth with vigorous theoretical advancements.' – Diana T. Kudaibergenova, University of Cambridge 'Using the concept of hybridity, Laruelle explores the multitude of historical, political and geopolitical factors that predetermine different ways of looking at nations and various configurations of nation-building in post-Soviet Central Asia. Those manifold contexts present a general picture of the transformation that the former southern periphery of the USSR has been going through in the past decades.' – Sergey Abashin, European University at St Petersburg

Cultural Tourism remains the only book to bridge the gap between cultural tourism and cultural and heritage management. The first edition illustrated how heritage and tourism goals can be integrated in a management and marketing framework to produce sustainable cultural tourism. The current edition takes this further to base the discussion of cultural tourism in the theory and practice of cultural and heritage management (CM and CHM), under the understanding that for tourism to thrive, a balanced approach to the resource base it uses must be maintained. An 'umbrella approach' to cultural tourism represents a unique feature of the book, proposing solutions to achieve an optimal outcome for all sectors. Reflecting the many important developments in the field this new edition has been completely revised and updated in the following ways: New content on increasingly relevant topics including sustainability, climate change, the threat of de-globalization, overtourism and social media. New sections on experience creation, accessibility and inclusivity, as well as expanded material on creative industries and new management challenges. New international case studies and tried-and-tested assignment exercises have been added to every chapter. Written by experts in both tourism and cultural heritage management, this book will enable professionals and students to gain a better understanding of their own and each other's roles in achieving sustainable cultural tourism. It provides a blueprint for producing top-quality, long-term cultural tourism products.

This handbook is a comprehensive and up to date work of reference that offers a survey of the state of financial geography. With Brexit, a global recession triggered by the COVID-19 pandemic, as well as new financial technology threatening and promising to revolutionize finance, the map of the financial world is in a state of transformation, with major implications for development. With these developments in the background, this handbook builds on this unprecedented momentum and responds to these epochal challenges, offering a comprehensive guide to financial geography. Financial geography is concerned with the study of money and finance in space and time, and their impacts on economy, society and nature. The book

consists of 29 chapters organized in six sections: theoretical perspectives on financial geography, financial assets and markets, investors, intermediation, regulation and governance, and finance, development and the environment. Each chapter provides a balanced overview of current knowledge, identifying issues and discussing relevant debates. Written in an analytical and engaging style by authors based on six continents from a wide range of disciplines, the work also offers reflections on where the research agenda is likely to advance in the future. The book's key audience will primarily be students and researchers in geography, urban studies, global studies and planning, more or less familiar with financial geography, who seek access to a state-of-the art survey of this area. It will also be useful for students and researchers in other disciplines, such as finance and economics, history, sociology, anthropology, politics, business studies, environmental studies and other social sciences, who seek convenient access to financial geography as a new and relatively unfamiliar area. Finally, it will be a valuable resource for practitioners in the public and private sector, including business consultants and policy-makers, who look for alternative approaches to understanding money and finance.

In recent years, the United Kingdom has become a more and more divided society with inequality between the regions marked as it has ever been. In a landmark analysis of the current state of Britain's regional development, Philip McCann utilises current statistics, examines historical trends and makes pertinent international comparisons to assess the state of the nation. The UK Regional–National Economic Problem brings attention to the highly centralised, top down governance structure that the UK deploys, and demonstrates that it is less than ideally placed to rectify these inequalities. The 'North-South' divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity, incomes, employment status and wealth. Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland, in contrast the Midlands, the North of England, Northern Ireland and Wales lag behind by most measures of prosperity. This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored. The UK's economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends, although this definitive study suggests that some areas of improvement are possible if they are well implemented. This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government.

*Food Television and Otherness in the Age of Globalization* examines the growing popularity of food and travel television and its implications for how we understand the relationship between food, place, and identity. Attending to programs such as Bizarre Foods, Bizarre Foods America, The Pioneer Woman, Diners, Drive-Ins, and Dives, Man vs. Food, and No Reservations, Casey Ryan Kelly critically examines the emerging rhetoric of culinary television, attending to how American audiences are invited to understand the cultural and economic significance of global foodways. This book shows how food television exoticizes foreign cultures, erases global poverty, and contributes to myths of American exceptionalism. It takes television seriously as a site for the reproduction of cultural and economic mythology where representations of food and consumption become the commonsense of cultural difference and economic success.

This book identifies the most effective water policy tools and innovations, and the circumstances that foster their successful implementation by taking a comparative look at a world-leading 'laboratory' of water law and governance: Australia. In particular, the book analyses Australia's 20-year experience implementing a hybrid governance system of markets, hierarchical regulation, and collaborative integrated water planning. Australia is acknowledged as a world leader in water governance reform, and an examination of its relatively mature water law and governance system has great significance for many international academics and jurisdictions. This book synthesises practical lessons and theoretical insights from Australia, as well as recommendations from comparative analysis with countries such as the United States to provide useful guidance for policymakers and scholars seeking to apply water instruments in a wide range of policy contexts. The book also advances our understanding of water and broader environmental governance theory and is a valuable reference for scholars, researchers and students working in law, regulation and governance studies – especially in the field of water and environmental law. Chapter "Lessons from Australian water reforms: Indigenous and environmental values in market-based water regulation" is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com).

What do the recent urban resistance tactics around the world have in common? What are the roles of public space in these movements? What are the implications of urban resistance for the remaking of public space in the "age of shrinking democracy"? To what extent do these resistances move from anti- to alter-politics? *City Unsilenced* brings together a cross-disciplinary group of scholars and scholar-activists to examine the spaces, conditions, and processes in which neoliberal practices have profoundly impacted the everyday social, economic, and political life of citizens and communities around the globe. They explore the commonalities and specificities of urban resistance movements that respond to those impacts. They focus on how such movements make use of and transform the meanings and capacity of public space. They investigate their ramifications in the continued practices of renewing democracies. A broad collection of cases is presented and analyzed, including Movimento Passe Livre (Brazil), Google Bus Blockades San Francisco (USA), the Platform for Mortgage Affected People (PAH) (Spain), the Piqueteros Movement (Argentina), Umbrella Movement (Hong Kong), post-Occupy Gezi Park (Turkey), Sunflower Movement (Taiwan), Occupy Oakland (USA), Syntagma Square (Greece), Researchers for Fair Policing (New York), Urban Movement Congress (Poland), urban activism (Berlin), 1DMX (Mexico), Miyashita Park Tokyo (Japan), 15M Movement (Spain), and Train of Hope and protests against Academic Ball in Vienna (Austria). By better understanding the processes and implications of the recent urban resistances, *City Unsilenced* contributes to the ongoing debates concerning the role and significance of public space in the practice of lived democracy.

The untold story of how America once created the most successful economy the world has ever seen and how we can do it again. The American economy glitters on the outside, but the reality is quite different. Job opportunities and economic growth are increasingly concentrated in a few crowded coastal enclaves. Corporations and investors are disproportionately developing technologies that benefit the wealthiest Americans in the most prosperous areas--and destroying middle class jobs elsewhere. To turn this tide, we must look to a brilliant and all-but-forgotten American success story and embark on a plan that will create the industries of the future--and the jobs that go with them. Beginning in 1940, massive public investment generated breakthroughs in science and technology that first helped win WWII and then created the most successful economy the world has ever seen. Private enterprise then built on these breakthroughs to create new industries--such as radar, jet engines, digital computers, mobile telecommunications, life-saving medicines, and the internet--that became the catalyst for broader economic growth that generated millions of good jobs. We lifted almost all boats, not just the yachts. Jonathan Gruber and Simon Johnson tell the story of this first American growth engine and provide the blueprint for a second. It's a visionary, pragmatic, sure-to-be controversial plan that will lead to job growth and a new American economy in places now left behind.

As the global economy seeks to recover from the financial crisis and warnings about the consequences of climate change abound, it is clear that we need a fundamentally new approach to tackle these issues. This innovative book offers a unique perspective, stressing the necessity of both ecological and social change as it discusses how to create a "red-green" or "eco-socialist" society. Examining the current crises of welfare capitalism as well as the challenges and conflicts of an eco-socialist society, the book proposes a new social order that would combine the ideals of egalitarianism and of environmental sustainability. It analyses the key social and ecological issues related to the welfare state, including green Keynesianism, ecological Marxism, the limits of growth and no-growth, capitalist barriers to a renewable energy transition, proposals for a universal basic income and the role of technology. Finally, the book outlines possible paths of transformation towards creating an eco-socialist society, drawing out lessons that can be applied internationally. This book will be of great interest to students and researchers in economics, environmental studies and political science.

Over the last few decades, many countries have reformed their secured transactions law. One of the main reasons has been the clear link between reform and the availability of credit, and the drive to improve access to finance, particularly for micro, small and medium-sized enterprises. This book focuses particularly on developing economies in Africa, which have legal frameworks influenced by English, French, Belgian, Roman-Dutch and other laws. Reform in this area of law across African countries has taken a number of forms, which are explored and discussed in this book. Secured Transactions Law Reform in Africa is a mixture of a critical description of the pre-reform law and practice, and the reform process itself. It also includes a comparative analysis of the legal provisions and an examination of the early results of the reforms. The book sets out a road map for the future of secured transactions reform; primarily in Africa, but also in other countries that have undertaken or are contemplating similar reforms. This book is the second in a series of books about Secured Transactions Law in countries around the world, and its reform, both on a national and an international scale. The first book, *Secured Transactions Law Reform: Principles, Policies and Practice*, was published in 2016.
