A city has many lives and layers. London has more than most. Not all the layers are underground, and not all the lives belong to the living. Twelve-year-old George Chapman is about to find this out the hard way. When, in a tiny act of rebellion, George breaks the head from a stone dragon outside the Natural History Museum, he awakes an ancient power. This power has been dormant for centuries but the results are instant and terrifying: A stone Pterodactyl unpeels from the wall and starts chasing

George. He runs for his life but it seems that no one can see what he's running from. No one, except Edie, who is also trapped in this strange world. And this is just the beginning as the statues of London awake... This is a story of statues coming to life; of a struggle between those with souls and those without; of how one boy who has been emotionally abandoned manages to find hope.

*Loose-Leaf for Strategic Management: Concepts and Cases* Little, Brown Books for Young Readers

The most important work on Alexander the Great to appear in a long time. Engels uses all the archaeological work done in Asia in the past generation and makes it accessible. Careful analysis of terrain, climate, and supply requirements are throughout combined in a fashion to help account for Alexander's strategic decision in the light of the options open to him. The chief merit of this splendid book is the way in which it brings an ancient army to life, as it really was and moved: the hours it took for simple operations of washing and cooking and feeding animals; the train of noncombatants moving with the army--New York Review of Books.
