Named by Inc. magazine as one of the 10 Best Business Books of 2018 Every startup wants to change the world. But the ones that truly make an impact know something the others don't: how to make government and regulation work for them. As startups use technology to shape the way we live, work, and learn, they're taking on challenges in sectors like healthcare, infrastructure, and education, where failure is far more consequential than a humorous chat with Siri or the wrong package on your doorstep. These startups inevitably have to face governments responsible for protecting citizens through regulation. Love it or hate it, we're entering the next era--in terms of both impact and financial return--will need skills they won't teach you in business school or most startup incubators: how to scale a business in an industry deeply intertwined with government. Here, for the first time, is the playbook on how to win the regulatory era. "Regulatory hacking" doesn't mean "cutting through red tape"; it's really about finding a creative, strategic approach to navigating complex markets. Evan Burfield is the cofounder of 1776, a Washington, DC-based venture capital firm and incubator specializing in regulated industries. Burfield has coached startups on how to understand, adapt to, and influence government regulation. Now, in *Regulatory Hacking*, he draws on that expertise and real startup success stories to show you how to do the same. For instance, you'll learn how... * AirBnB rallied a grassroots movement to vote No on San Francisco's Prop F, which would have restricted its business in the city. * HopSkipDrive overcame safety concerns about its kids' ridesharing service by working with state government to build trust into its platform. * 23andMe survived the FDA's order to stop selling its genetic testing kits by building trusted relationships with scientists who could influence the federal regulatory community. Through fascinating case studies and interviews with startup founders, Burfield shows you how to build a compelling narrative for your startup, use it to build a grassroots movement to impact regulation, and develop influence to overcome entrenched relationships between incumbents and governments. These are just some of the tools in the book that you'll need to win the next frontier of innovation.

An exploration of ways of looking in Renaissance Florence, where works of art were part of a complex process of social exchange Renaissance Florence, of endless fascination for the beauty of its art and architecture, is no less intriguing for its dynamic political, economic, and social life. In this book Patricia Lee Rubin crosses the boundaries of all these areas to arrive at an original and comprehensive view of the place of images in Florentine society. The author asks an array of questions: Why were works of art made? Who were the artists who made them, and who commissioned them? How did they look, and how were they looked at? She demonstrates that the answers to such questions illuminate the contexts in which works of art were created, and how they were valued and viewed. Rubin seeks out the meeting places of meaning in churches, in palaces, in piazzas--places of exchange where identities were taken on and transformed, often with the mediation of images. She concentrates on questions of vision and visibility, on "seeing and being seen." With a blend of exceptional illustrations; close analyses of sacred and secular paintings by artists including Fra Angelico, Fra Filippo Lippi, Filippino Lippi, and Botticelli; and wide-ranging bibliographic essays, the book shines new light on fifteenth-century Florence, a special place that made beauty one of its defining features.

"Many interesting developments have occurred in the world of venture capital since the

publication of the first edition of this book in 2006, which prompted us to revise the book for the second edition. While the organization of the book remains unchanged, many of the chapters are substantially rewritten. For example, in Chapter 5, we re-ranked top VC firms, incorporating the latest performance statistics, fundraising and investment activities, notable exits, and (as always) our subjective opinions. In Chapter 6, we examine further evidence of the deepening globalization of the industry. In Chapters 3, 4, and 7, we analyze the impact of the 1999-2000 Internet bubble years on the VC risk and returns, as investments made in those years are finally mature and thus now a part of the performance evaluation analysis. We also incorporated expositional improvements throughout the book based on reader feedback on the first edition. Another feature of the new edition is that the VCV model, used extensively in Part III of the book, is now available as a Web-based application available on <http://VCVtools.com>. Significant collaborative efforts went into developing this tool, which we believe will be of interest to a broad audience, including practitioners interested in valuing VC-backed company stocks and employee stock options"

[The Quiet Revolution](#) Yale University Press Ten years ago, the United States stood at the forefront of the Internet revolution. With some of the fastest speeds and lowest prices in the world for high-speed Internet access, the nation was poised to be the global leader in the new knowledge-based economy. Today that global competitive advantage has all but vanished because of a series of government decisions and resulting monopolies that have allowed dozens of countries, including Japan and South Korea, to pass us in both speed and price of broadband. This steady slide backward not only deprives consumers of vital services needed in a competitive employment and business market--it also threatens the economic future of the nation. This important book by leading telecommunications policy expert Susan Crawford explores why Americans are now paying much more but getting much less when it comes to high-speed Internet access. Using the 2011 merger between Comcast and NBC Universal as a lens, Crawford examines how we have created the biggest monopoly since the breakup of Standard Oil a century ago. In the clearest terms, this book explores how telecommunications monopolies have affected the daily lives of consumers and America's global economic standing. [Captive Audience](#) Berrett-Koehler Publishers Provides historical and anthropological perspectives on the Western family, focusing on family life in Italy from the Roman Empire to the present. Topics covered include marriage, divorce, matchmaking, inheritance, sexual mores, celibacy, adoption and property rights.

This study investigates the nature of the impact of globalization on the Indian state. It takes as its point of departure the thesis, set out in the introductory essay, that globalization has resulted in the erosion of the economic and welfare roles of the state. According to the author, the shift to liberalization, the resurgence of the private sector, and the acceleration of growth rate paradoxically 'empowered' and 'enabled' the state. He argues that the examination of the quantitative data strongly points to the continued expansion of the economic and welfare roles of the state, rather than decline. Therefore, the retrenchment of the state does not have much merit. He emphasizes on the fundamental continuity in the key functions of the state. He concludes by saying that the state is lagging behind in the areas of internal security, education and health, and makes suggestions for institutional reforms.

The Cherokee are one of the largest Native American tribes in the United States, with more than three hundred thousand people across the country claiming tribal membership and nearly one million people internationally professing to have at least one Cherokee Indian ancestor. In this revealing history of Cherokee migration and resettlement, Gregory Smithers uncovers the origins of the Cherokee diaspora and explores how communities and individuals have negotiated their Cherokee identities, even when geographically removed from the Cherokee Nation headquartered in Tahlequah, Oklahoma. Beginning in the eighteenth century, the author transports the reader back in time to tell the poignant story of the Cherokee people migrating throughout North America, including their forced exile along the infamous Trail of Tears (1838-39). Smithers tells a remarkable story of courage, cultural innovation, and resilience, exploring the importance of migration and removal, land and tradition, culture and language in defining what it has meant to be Cherokee for a widely scattered people.

[The Hacker Crackdown, Law and Disorder on the Electronic Frontier](#) Yale University Press

High public debt often produces the drama of default and restructuring. But debt is also reduced through financial repression, a tax on bondholders and savers via negative or belowmarket real interest rates. After WWII, capital controls and regulatory restrictions created a captive audience for government debt, limiting tax-base erosion. Financial repression is most successful in liquidating debt when accompanied by inflation. For the advanced economies, real interest rates were negative 1/2 of the time during 1945-1980. Average annual interest expense savings for a 12-country sample range from about 1 to 5 percent of GDP for the full 1945-1980 period. We suggest that, once again, financial repression may be part of the toolkit deployed to cope with the most recent surge in public debt in advanced economies. [Telecommunications Crash Course, Third Edition](#) Bloomsbury Publishing The rise of open data in the public sector has sparked innovation, driven efficiency, and fueled economic development. While still emerging, we are

seeing evidence of the transformative potential of open data in shaping the future of our civic life, and the opportunity to use open data to reimagine the relationship between residents and government, especially at the local level. As we look ahead, what have we learned so far from open data in practice and how we can apply those lessons to realize a more promising future for America's cities and communities? Edited by Brett Goldstein, former Chief Data Officer for the City of Chicago, with Code for America, this book features essays from over twenty of the world's leading experts in a first-of-its-kind instructive anthology about how open data is changing the face of our public institutions. Contributors include: Michael Flowers, Chief Analytics Officer, New York City Beth Blauer, former director of Maryland StateStat Jonathan Feldman, CIO, City of Asheville Tim O'Reilly, founder & CEO, O'Reilly Media Eric Gordon, Director of Engagement Game Lab, Emerson College Beth Niblock, CIO, Louisville Metro Government Ryan & Mike Alfred, Co-Founders, Brightscope Emer Coleman, former director of the London Datastore Mark Headd, Chief Data Officer, City of Philadelphia "As an essential volume for anyone interested in the future of governance, urban policy, design, data-driven policymaking, journalism, or civic engagement, "Beyond Transparency" combines the inspirational glow and political grit of Profiles in Courage with the clarity of an engineer's calm explanation of how something technical actually works. Here are the detailed how-to stories of many members of the first generation of open government pioneers, written in a generous, accessible style; this compilation presents us with a great deal to admire, ample provocation, and wise guidance from a group of remarkable individuals." -Susan Crawford, author of Captive Audience "Just as he did during his time in my administration, Goldstein has brought together industry leaders to discuss issues of relevance in the open data movement and the practical implications of implementing these policies... This book will help continue the work to make open government a reality across the country." - Mayor Rahm Emanuel, City of Chicago "A must-read for anyone who is passionate about what open data can do to transform city living." - Boris Johnson, Mayor of London

Leveraging Big Data and 21st century technology to renew cities and citizenship in America The Responsive City is a guide to civic engagement and governance in the digital age that will help leaders link important breakthroughs in technology and data analytics with age-old lessons of small-group community input to create more agile, competitive, and economically resilient cities. Featuring vivid case studies highlighting the work of pioneers in New York, Boston, Chicago and more, the book provides a compelling model for the future of governance. The book will help mayors, chief technology officers, city administrators, agency directors, civic groups and nonprofit leaders break out of current paradigms to collectively address civic problems. The Responsive City is the culmination of research originating from the Data-Smart City Solutions initiative, an ongoing project at Harvard Kennedy School working to catalyze adoption of data projects on the city level. The book is co-authored by Professor Stephen Goldsmith, director of Data-Smart City Solutions at Harvard Kennedy School, and Professor Susan Crawford, co-director of Harvard's Berkman Center for Internet and Society. Former New York City Mayor Michael Bloomberg penned the book's foreword. Based on the authors' experiences and extensive research, The Responsive City explores topics including: Building trust in the public sector and fostering a sustained, collective voice among communities; Using data-smart governance to preempt and predict problems while improving quality of life; Creating efficiencies and saving taxpayer money with digital tools; and Spearheading these new approaches to government with innovative leadership.

Universal Service Paul Mellon Ctr for Studies

Seventy years have passed since the

tortured inmates of Hitler's concentration and extermination camps were liberated. When the horror of the atrocities came fully to light, it was easy for others to imagine the joyful relief of freed prisoners. Yet for those who had survived the unimaginable, the experience of liberation was a slow, grueling journey back to life. In this unprecedented inquiry into the days, months, and years following the arrival of Allied forces at the Nazi camps, a foremost historian of the Holocaust draws on archival sources and especially on eyewitness testimonies to reveal the complex challenges liberated victims faced and the daunting tasks their liberators undertook to help them reclaim their shattered lives. Historian Dan Stone focuses on the survivors—their feelings of guilt, exhaustion, fear, shame for having survived, and devastating grief for lost family members; their immense medical problems; and their later demands to be released from Displaced Persons camps and resettled in countries of their own choosing. Stone also tracks the efforts of British, American, Canadian, and Russian liberators as they contended with survivors' immediate needs, then grappled with longer-term issues that shaped the postwar world and ushered in the first chill of the Cold War years ahead.

The Myth of the Shrinking State Yale University Press

COMPLETE COVERAGE OF THE LATEST TELECOMMUNICATIONS TECHNOLOGIES AND TRENDS Fully revised to address the convergence of the telecom, media, and technology (TMT) sectors, the new edition of this cutting-edge guide provides a comprehensive overview of the current telecom landscape. The book focuses on the interdependence of the IT infrastructure, multimedia content, and broadband transport network in today's hyper-connected mobile environment and discusses the importance of storing, delivering, analyzing, tracking, and monetizing content. Emerging telecom technologies are described in detail. This up-to-date resource is essential for TMT professionals, business decision-makers, marketing and sales staff, and students. Telecommunications Crash Course, Third Edition, covers: Standards and regulations Data communications protocols Telephony, VoIP, SS7, SIP, and IP PBX Premises technologies -- LANs, Gigabit Ethernet, WiFi, ZigBee, FireWire, Thunderbolt, and USB Content -- multimedia, video, and TV Fixed access technologies, including DSL, cable, DOCSIS 3.0, CMTS, and DSLAM Wireless access technologies such as CDMA, GSM, HSPA, LTE, Bluetooth, RFID, and satellite solutions Transport technologies -- frame relay, ATM, high-speed IP switching, optical networking, DWDM, channelized optics, and optical switching IP, IPv6, Multiprotocol Label Switching (MPLS), and IP networking IT, telecom, and media convergence Cloud technologies, data centers, analytics, big data, security, Dumb Terminal 2.0, Bring Your Own Device (BYOD), and other emerging topics

The Indian Media Business Bloomsbury Publishing

'Intellectual property and private international law' was one of the subjects discussed at the 18th International Congress of Comparative Law held in Washington (July 2010). This volume contains the General Report and 20 National Reports covering Canada, US, Japan, Korea, India and a number of European countries (Austria, France, Germany, UK, Spain etc). The General Report was prepared on the basis of National Reports. The national reporters not only describe the existing legal framework, but also provide answers for up to 12 hypothetical cases concerning international jurisdiction, choice-of-law

and recognition and enforcement of foreign judgments in multi-state IP disputes. Based on their answers the main differences between legal systems as well as the shortcomings of the cross-border enforcement of IP rights are outlined in the General Report. The Reports in this volume analyse relevant court decisions as well as recent legislative proposals (such as the ALI, CLIP, Transparency, Waseda and Korean Principles). This book is therefore a significant contribution to the existing debate in the field and will be a valuable source of reference in shaping future developments in the cross-border enforcement of IP rights in a global context.
