The automotive industry underwent great change in the 1960s and the early 1970s. The continuing trend toward market consolidation, the proliferation of sizes and nameplates, and the “need for speed” characterized this period, loosely labeled as the muscle car era. This is an exhaustive reference work to American made cars of model years 1960–1972. Organized by year (and summarizing the market annually), it provides a yearly update on each make’s status and production figures, then details all models offered for that year. Model listings include available body styles,

base prices, engine and transmission choices, power ratings, standard equipment, major options and their prices, curb weight and dimensions (interior and exterior), paint color choices, changes from the previous year’s model, and sales figures. Also given are assembly plant locations and historical overviews of each model nameplate. The book is profusely illustrated with 1,018 photographs.

To mark the 25th anniversary of Contemporary Ergonomics, the current and past editors have selected 4 papers from each of the years that they oversaw its publication. This collection is intended to showcase the breadth of research topics covered by the

Contemporary Ergonomics series of books and to illustrate the change of focus in ergonomics research over the years. The book also contains background information relating to the Annual Conference of the Ergonomics Society for each year, including dates, venues and personnel. The editors also give some insight into the way the format of the conference has had to change to enable the diversity of topics submitted by the ergonomists to be presented effectively.

This book investigates how humans relate to technology in our modern society, and how our basic assumption of human thought and behavior guide our efforts to improve and control technology. This book shows how this

dualism is evident and problematic in a wide range of areas, such as investigation of human error in accidents, case studies of innovative interface solutions, simulator training strategies, analysis of work practices in complex systems, and traffic safety research.

This book is written for researchers, students and professionals, to supplement the ongoing effort to understand how technology can be integrated with more confidence in modern society.
