A little explanation of how a carburetor works... A carb is a vacuum operated fuel delivery device... Unlike fuel

injection, a carb only works when when your engine sucks on it... That is engine vacuum... When the piston in your engine goes down, it sucks fuel from the carb,... the piston goes up, and it blows out of the muffler.

Lower the idle with the idle thumb screw until the engine is about to stall. Then adjust the idle mixture screw to achieve an idle as high as possible. If the idle increases, lower the idle thumb screw again and repeat this process until the engine will no longer idle any higher by adjusting the fuel screw alone.

Which intake manifold should you choose? Holley and other manufacturers offer a wide array of single- and multiple-carb manifolds. In basic terms, if you want low-end torque at lower engine RPM, consider a dual-plane intake manifold. Single-plane manifolds tend to favor upper-end power at higher engine speeds. A very broad generalization is to select a ...

Carburetor Tuning Guide Suzuki - mitrabagus.com

The Mikuni CV carburetor can be tuned via 3 methods, the main jet that controls fuel flow during full acceleration, the needle clip position that controls fuel flow during cruising and roll on throttle, and the mixture screws that regulate fuel flow during idle conditions. The carburetor should be tuned first by testing the motorcycle, and noting the characteristics of the idle, roll on and full acceleration.

### **Carb Quick Guide | S&S Cycle**

Keihin carburetors are only legal in California for racing vehicles, which may never be driven on public highways or waterways. Keihin carburetors are designed to be used with normal pump gasoline. Fuels that contain over 10% alcohol content may damage parts in the carburetors. This may prevent the carburetor from functioning properly.
