[Physiology Cardiovascular System - BrianMac](#)

The circulatory system is one of the primary systems of the body. Massage students and therapists need to have a good understanding of the circulatory system anatomy

and physiology before taking the MBLEx.

Heart Anatomy | Anatomy and Physiology heart when the capillaries return blood to the venules and then to the larger veins. The cardiovascular system, therefore, consists of a closed circuit: the heart, arteries, arterioles, capillaries, venules, and veins (see Figure 5 – 1). The venules . 36.

The inside of the heart (heart cavity) is divided into four chambers – two atria and two ventricles –

separated by cardiac valves that regulate the passage of blood. The heart is enclosed in a sac, the pericardium, which protects it and prevents it from over-expanding, anchoring it inside the thorax.

Cardiovascular anatomy and physiology The circulatory system is also called the cardiovascular system, where “cardi” refers to the heart, and “vascular” refers to the blood vessels. So, these are the two key parts: the heart, which pumps blood, and the blood vessels, which carry blood to the body and return it back to the heart again.

Facts, Organs & Functions

The cardiovascular system has two distinct circulatory paths: Pulmonary circulation; Systemic circulation; The right side of the heart pumps blood to the lungs (pulmonary circulation). In the lungs blood gets oxygenated from the air sacs. At the same time, carbon dioxide diffuses into the air sacs and is exhaled into the atmosphere.

Cardiovascular System - Anatomy & Physiology

The circulatory system, also called the cardiovascular system or the vascular system, is an organ system that permits blood to circulate and transport nutrients (such as amino acids and electrolytes), oxygen, carbon dioxide,

hormones, and blood cells to and from the cells in the body to provide nourishment and help in fighting diseases, stabilize temperature and pH, and maintain homeostasis.

Anatomy and Physiology of Cardiovascular System Tutorial

Anatomy of the Heart The cardiovascular system can be compared to a muscular pump equipped with one-way valves and a system of large and small plumbing tubes within which the blood travels. **Heart Structure and Functions** The modest size and weight of the heart give few hints of its incredible strength.

The cardiovascular system is a closed system if the heart and blood vessels. The heart pumps blood through a closed system of blood vessels. Blood vessels allow blood to circulate to all parts of the body.

Arteries usually colored red because oxygen rich, carry blood away from the heart to capillaries within the tissues.

Cardiovascular System - Anatomy And Physiology

Cardiovascular System – Anatomy and Physiology. The cardiovascular system relates to the heart, blood vessels, and blood. Blood contains proteins in its red blood cells called as hemoglobin which carries oxygen to cells and tissues in the body. The cardiovascular system can be deemed as the transport system of the body.
