How we experience space by listening: the concepts of aural architecture, with examples ranging from Gothic cathedrals to surround sound home theater. We experience spaces not only by seeing but also by listening. We can navigate a room in the dark, and "hear" the emptiness of a house without furniture. Our experience of music in a concert hall depends on whether we sit in the front row or under the balcony. The unique acoustics of religious spaces acquire symbolic meaning. Social relationships are strongly influenced by the way that space changes sound. In *Spaces Speak, Are You Listening?*, Barry Blesser and Linda-Ruth Salter examine auditory spatial awareness: experiencing space by attentive listening. Every environment has an aural architecture. The audible attributes of physical space have always contributed to the fabric of human culture, as demonstrated by prehistoric multimedia cave paintings, classical Greek open-air theaters, Gothic cathedrals, acoustic geography of French villages, modern music reproduction, and virtual spaces in home theaters. Auditory spatial awareness is a prism that reveals a culture's attitudes toward hearing and space. Some listeners can learn to "see" objects with their ears, but even without training, we can all hear spatial geometry such as an open door or low ceiling. Integrating contributions from a wide range of disciplines—including architecture, music, acoustics, evolution, anthropology, cognitive psychology, audio engineering, and many others—*Spaces Speak, Are You Listening?* establishes the concepts and language of aural architecture. These concepts provide an interdisciplinary guide for anyone interested in gaining a better understanding of how space enhances our well-being. Aural architecture is not the exclusive domain of specialists. Accidentally or intentionally, we all function as aural architects.

The LaTrappe Creek Chronicles is a story of how a week of sailing with four friends became an annual event. Friends invited friends, fathers invited sons and eventually grandfathers invited grandsons-joining to create enduring memories of camaraderie and adventure. Thirty-five years later, the Society still sails for one week each year, but with some ten boats and a roster of over one hundred members. In these pages, we celebrate the sport of sailing-noting the range from racing small one design dinghies to cruising catamarans, from the America's Cup to the "Tucket Bucket". Jet travel and charter facilities worldwide afford new sailing grounds and catalyzed our group to sail in exotic venues and add on unique travel with spouses and friends. Unusual highlights include an audience with the Pope and treading the sacred burial grounds of the gods of Polynesia. The combination of sailing and travel brought a keen interest in history and ecology, long before saving the oceans became so critical. This is also a story of the robust education found while in the pursuit of the art and science of sailing: the discipline of proper anchoring; the joys of producing gourmet fare from a tiny galley; the spice of philosophy; the confrontation of political discourse; and examining and embracing the different views on economics and cosmic exploration. Most of these lessons cascading from the confines of a cockpit with brandy and cigars! The Chronicles is not a "how to" book, but there are usable observations for governance of such an organization as the LaTrappe Creek Historical and Ecological Society. There are "By-Laws" indelibly

retained in the memory of the Commodore and established "Archives" to secure information that even the CIA or KGB could not access. Above all, these chronicles relate how all who have been a part of this sailing saga have experienced the joy of valued friends and unfortunately the sadness of burying old friends at sea. And Oh Yes! There is a real place called LaTrappe Creek and all the characters in this book are real.

A Handbook on Piping

A detailed and thorough reference on the discipline and practice of systems engineering The objective of the International Council on Systems Engineering (INCOSE) Systems Engineering Handbook is to describe key process activities performed by systems engineers and other engineering professionals throughout the life cycle of a system. The book covers a wide range of fundamental system concepts that broaden the thinking of the systems engineering practitioner, such as system thinking, system science, life cycle management, specialty engineering, system of systems, and agile and iterative methods. This book also defines the discipline and practice of systems engineering for students and practicing professionals alike providing an authoritative reference that is acknowledged worldwide. The latest edition of the INCOSE Systems Engineering Handbook: Is consistent with ISO/IEC/IEEE 15288:2015 Systems and software engineering—System life cycle processes and the Guide to the Systems Engineering Body of Knowledge (SEBoK) Has been updated to include the latest concepts of the INCOSE working groups Is the body of knowledge for the INCOSE Certification Process This book is ideal for any engineering professional who has an interest in or needs to apply systems engineering practices. This includes the experienced systems engineer who needs a convenient reference, a product engineer or engineer in another discipline who needs to perform systems engineering, a new systems engineer, or anyone interested in learning more about systems engineering.
