Leslie Odom Jr., burst on the scene in 2015, originating the role of Aaron Burr in the Broadway musical phenomenon Hamilton. Since then, he has performed for sold-out audiences, sung for the Obamas at the White House, and won a Tony Award for Best Leading Actor in a Musical. But before he landed the role of a lifetime in one of the biggest musicals of all time, Odom put in years of hard work as a singer and an actor. With personal stories from his life, Odom asks the questions that will help you unlock your true potential and achieve your goals even when they seem impossible. What work did you put in today that will help you improve tomorrow? How do you surround yourself with people who will care about your dreams as much as you do? How do you know when to play it safe and when to risk it all for something bigger and better? These stories will inspire you, motivate you, and empower you for the greatness that lies ahead, whether you 're graduating from college, starting a new job, or just looking to live

each day to the fullest.

Zookeeper, horse stable owner, archeologist, lawyer, pilot, fireman, newspaper editor, dairy farmer, arson

detective . . . these are just a few of the creative thinking and teach the value of real people who, in their own words, share their own daily encounters with mathematics. How much lettuce does the Pizza Hut manager need to order for next week? How many rose bushes can a gardener fit around a wading pool? How many fire hoses will be needed to extinguish the fire? Your students will be amazed at the real-life math faced by truck drivers, disc jockeys, farmers, and car mechanics. Real Life Math Mysteries introduces students to math in the real world through a series of problems drawn from a vast array of community leaders, business professionals, and city officials. The problems are designed to stimulate students'

math in a real-world setting. Each concise and clear problem is provided on a blackline master and includes problem-solving suggestions for students with a comprehensive answer key. The problems are tied to the guidelines for math instruction from the National Council of Teachers of Mathematics. This book will get students thinking about the mathematics all around them. Make math last a lifetime. Students will delight in the real-life approach to math as they realize that they will use math skills over and over again in whatever vocation they choose. Make math an exciting experience that children realize will last a lifetime.

Meet Blackwater USA, the private army that the US government has quietly hired to operate in international war zones and on American soil. Its contacts run from military and intelligence agencies to the upper echelons of the White House; it has a military base, a fleet of aircraft and 20,000 troops, but since September 2007 the firm has been hit by a series of scandals that, far from damaging the company, have led to an unprecedented period of expansion. This revised and updated edition includes Scahill's continued

investigative work into one of the outrages of our time: the privatisation of war.

It takes a graveyard to raise a child. Nobody Owens, known as Bod, is a normal boy. He would be completely normal if he didn't live in a graveyard, being raised by ghosts, with a guardian who belongs to neither the world of the living nor the dead. There are adventures in the graveyard for a boy—an ancient Indigo Man, a gateway to the abandoned city of ghouls, the strange and terrible Sleer. But if Bod leaves the graveyard, he will be in danger

from the man Jack—who has already killed Bod's family.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the

field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural

networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

As a field, education has largely failed to learn from experience. Time after time, promising education reforms fall short of their goals and are abandoned as other promising ideas take their place. In *Learning to Improve*, the authors argue for a new approach. Rather than "implementing fast and learning slow," they believe educators should adopt a more rigorous approach to improvement that allows the field to "learn

fast to implement well." Using ideas borrowed from improvement science, the authors show how a process of disciplined inquiry can be combined with the use of networks to identify, adapt, and successfully scale up promising interventions in education. Organized around six core principles, the book shows how "networked improvement communities" can bring together researchers and practitioners to accelerate learning in key areas of education. Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers. *Learning to Improve* offers a new paradigm for

research and development in education that promises to be a powerful driver of improvement for the nation's schools and colleges.

A monster assembled by a scientist from parts of dead bodies develops a mind of his own as he learns to loathe himself and hate his creator. Shelley's suspenseful and intellectually rich gothic tale confronts some of the most important and enduring themes in all of literature—the power of human imagination, the potential hubris of science, the gulf between appearance and essence, the effects of human cruelty, the desire for revenge and the need for forgiveness, and much more.

Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can

select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

Soft Selling In A Hard World
McGraw-Hill Education

"We cannot change the cards we are dealt, just how we play the hand."---Randy Pausch A lot of professors give talks titled "The Last Lecture." Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy

Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he had recently been diagnosed with terminal cancer. But the lecture he gave--"Really Achieving Your Childhood Dreams"--wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because "time is all you have...and you may find one day that you have less than you think"). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture

such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.
