Building Construction and Superintendence: Carpenters' work Franklin Classics Trade Press

How were huge stones moved from quarries to the sites of Egyptian pyramids? How did the cathedral builders of the Middle Ages lift blocks to

great heights by muscle power alone? In this intriguing book John Fitchen explains and illustrates the solutions to these and many other puzzles in preindustrial building construction. This is the first general survey of the practices and role of the builder (as opposed to the designer) in constructing an array of structures. Fitchen's approach gives a valuable hands-on feel for what it's like to work with ropes and ladders, wedges and slings; with crews engaged in well digging, bridge building, and the transporting of obelisks hundreds of miles by water and over land. The buildings discussed range from the tents, tepees, and igloos of nomadic tribes to the monumental pyramids of Egypt, the temples of Greece, the aqueducts of Rome, and the cathedrals of medieval Europe.

Discover the Strength, Economy, and Durability of Building with Poles Building with poles can save you time, money, and effort. Creating strong, durable structures this way requires only limited grading and essentially no excavation on site, allows for plenty of design flexibility, and utilizes fewer materials than other building techniques. In his classic do-it-yourself guide Practical Pole Building Construction, author and builder Leigh Seddon covers everything you need to know about all stages of the process from initial designing and planning to the actual construction and building stage. With an emphasis on practicality and economy, this essential reference manual includes helpful, easy-to-follow yet detailed information about how to choose between kiln-dried vs. green poles; architectural and structural specifications; site selection; construction-site preparation; design principles; aesthetics; pole setting; sustainability considerations; and ways to insulate and ventilate. It also features original design plans for multiple building and outbuilding types, including lean-to barn, horse stable, hillside house, garage/woodshed, mountain pole cabin, and coastal/lake house. In addition to the many

photographs within, illustrator David Sylvester provides plentiful architectural drawings to accompany the clear, informative text. Engineer and veteran builder Leigh Seddon is also the author of Low-Cost Green Lumber Construction (also available from Echo Point Books)' another time-honored reference book for resourceful, do-it-yourself builders looking to save costs and work sustainably.

Carpentry & Building Construction, Student Text
Routledge

This book provides the apprentice or trainee carpenter and joiner with the basic technical knowledge necessary to complete the first half of a City and Guilds Course in Carpentry and Joinery. It will also be a useful reference to any persons studying for examinations, or simply wishing to further their knowledge in one of the associated areas, such as wood machining, cabinet making or general building construction. Dealing with the basic skills and techniques employed in the present day construction industry, the text assumes little prior knowledge of the subject, but lays before the reader a simple, straight forward and readable out of the skills, tools, materials and methods likely to be used or encountered in the workshop,

on site or during studies at
home or in college.
