Solids that possess acidic
properties on their surfaces
function as catalysts just like
liquid acids, such as sulfuric
acid and hydrochloric acid. By
using solid acid catalysts,
chemical processes become more
productive and more
environmentally friendly. In fact,
solid acids are being used in many
industrial chemical processes from
the largest chemical process of
catalytic cracking in petroleum
refining to the synthesis of
various fine chemicals. This book
covers the fundamentals of solid
acid catalysis, including its
history and characterization, and
discusses different types of
catalysts and solid acid-catalyzed
reactions as well as their
industrial applications. It
comprehensively covers from
fundamentals to applications and

will be useful for students, young
researchers, and advanced
researchers.

This book contains the main international
commercial contracts that small and medium-
sized enterprises (SMEs) will need in their
trade transactions. All contracts are harmonized
in structure as well as in content through the
insertion in each of identical boilerplate or
recurring clauses. Each Model Contract
indicates the basic elements that a non-
specialist should fill in or should consider when
entering into an agreement. The nine model
forms and the boilerplate clauses were selected
on the basis of a worldwide survey of
representative institutions of SMEs. The Model
Contracts will be supplemented in due course
with training material developed ITC.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. This must-read for lovers of Stephen King's *The Shining* will leave readers breathless as Seda and her family find themselves at the mercy of a murderer in an isolated and snowbound hotel. Get ready for what Kirkus calls "A bloody, wonderfully creepy scare ride." When her mom inherits an old, crumbling mansion, Seda's almost excited to spend the summer there. The grounds are beautiful and it's fun to explore the sprawling house with its creepy rooms and secret passages. Except now her mom wants to renovate, rather than sell the estate—which means they're not going back to the city...or Seda's friends and school. As the days grow shorter, Seda is filled with dread. They're about to be cut off from the outside world, and she's not sure she can handle the solitude or the darkness it brings out in her. Then a group of teens get stranded near the mansion during a blizzard. Seda has no choice but to offer them shelter, even though she knows danger lurks in the dilapidated mansion—and in herself. And as the snow continues to fall, what Seda fears most is about to become her reality...
