Limitation of liability for maritime claims is a concept of respectable antiquity which is now deeply entrenched in the maritime industry. Under this concept, the shipowner is entitled to limit his liability for maritime claims up to a maximum sum regardless of the actual amount of the claims. The concept of limitation of liability has been adopted by many conventions ranging from those relating to the carriage of goods by sea, carriage of passengers and their luggage by sea, liability and compensation for pollution damage, to liability for the removal of wrecks. Each of these

conventions has its own approach to limitation of liability. However, these particular liability regimes share the international arena with global limitation conventions such as the 1976 Convention on Limitation of Liability for Maritime Claims and the 1996 Protocol thereto. This book approaches limitation of liability from an international perspective looking at a number of key conventions including the global limitation conventions, the conventions relating to the carriage of passengers and their luggage by sea (1974 Athens Convention relating to the Carriage of Passengers and Their Luggage by Sea and the 2002 Protocol thereto), conventions relating to liability and compensation for pollution damage (1969 International Convention on Civil Liability for Oil Pollution Damage and the 1992 Protocol thereto, the 1996 International Convention on Liability and Compensation for Damage in Connection with the Carriage of Hazardous and Noxious Substances by Sea and the 2010 Protocol thereto, and the 2001 International Convention on Civil Liability for Bunker Oil Pollution Damage), as well as the 2007 Nairobi International Convention on the Removal of Wrecks. Each chapter of this book sets out to analyze provisions in the conventions which have proved to be controversial and subject to debate by courts and authors, as well as the relationship between the limitation provisions in claim specific liability conventions and in the global limitation conventions. Particular attention is also given to the persons entitled to limit liability, ships in respect of which liability can be limited, claims subject to limitation, claims excepted from limitation, basis of liability (where applicable), loss of the right to limit, and the limits of liability. Limitation of Liability in International Maritime Conventions is of interest to academics and practicing lawyers who wish to understand the intricacies of the law of limitation.

As the complexity and the density of VLSI chips increase with shrinking design rules, the evaluation of long-term reliability of MOS VLSI circuits is becoming an important problem. The assessment and improvement of reliability on the circuit level should be based on both the failure mode analysis and the basic understanding of the physical failure mechanisms observed in integrated circuits. Hot-carrier induced degradation of MOS transistor characteristics is one of the primary mechanisms affecting the long-term reliability of MOS VLSI circuits. It is

likely to become even more important in future generation chips, since the down ward scaling of transistor dimensions without proportional scaling of the operating voltage aggravates this problem. A thorough understanding of the physical mechanisms leading to hot-carrier related degradation of MOS transistors is a prerequisite for accurate circuit reliability evaluation. It is also being recognized that important reliability concerns other than the post-manufacture reliability qualification need to be addressed rigorously early in the design phase. The development and use of accurate reliability simulation tools are therefore crucial for early assessment and improvement of circuit reliability : Once the long-term reliability of the circuit is estimated through simulation, the results can be compared with predetermined reliability specifications or limits. If the predicted reliability does not satisfy the requirements, appropriate design modifications may be carried out to improve the resistance of the devices to degradation.

Motor-Age Professional Mechanic's Edition McGraw-Hill Professional Publishing

TODAY'S TECHNICIAN: ADVANCED AUTOMOTIVE ELECTRONIC SYSTEMS, is an extension of the popular Today's Technician Series that covers all mechanical and electrical systems of automobiles and light trucks. This book is intended for a course in advanced automotive electronic systems and is divided into two volumes: a Classroom Manual and a Shop Manual that separate cognitive and performance learning objectives, respectively. The design is based on features that are known to promote improved student learning. The Classroom Manual contains the principles of operation for the most advanced electrical systems used today and covers design variations of components used by the different vehicle manufacturers. The book builds upon basic facts and theories and will help develop students' knowledge through its extensive coverage of component and system operation The Shop Manual covers the diagnostic processes for proper repairs and focuses more on the diagnostics of the components used within a system than on how to replace the component. The intent is to guide your students' thought processes toward finding the root cause of the problem, concentrating their attention on becoming a diagnostician and not a parts changer. Your students will learn how to develop a systematic approach to problem solving in order to isolate the root cause of the problem, thereby enhancing their ability to fix products right the first time. Photo Sequences are used to illustrate some of the common diagnostic procedures. Both Manuals are arranged in corresponding chapters, and topics within the chapters are linked between manuals by page references in the margins. Both volumes contain clear and thoughtfully-selected photos and illustrations. The margins of the pages include many special features of the series that are designed to underscore important points made in the running text, highlight safety concerns, and offer real world scenarios that the author has encountered in the shop.
