This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Step by step to self-sewn men's clothing. You quickly learn to sew - but tailoring requires passion, dedication and perseverance. Similar to learning an instrument, dexterity and an eye for the essentials must be trained. The step-by-step instructions in this book with numerous photos and drawings lead safely to the finished garment. Detailed explanations ensure that you always have an overview and that the individual working steps are carried out in the correct order; different processing variants leave room for individuality. Absolute beginners may need a little more patience than experienced - but with the tips and tricks provided by master tailor Sven Jungclaus and a little practice, the first successes can be achieved quickly. Those who proudly hold the self-sewn piece in their hands, easily find the courage for further tailoring projects.

The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments, though its importance has grown steadily since the beginning of the 1980s. Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative, it has become the focus of special interest and efforts. This book is the first attempt to present a broad overview of the prospects for information technology in general, and machine intelligence in particular, in the context of international security. The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision-making processes are analysed in a technical, strategic, and political perspective by experts from six different countries. In an introductory chapter, Allan Din presents a generic overview of artificial intelligence and its prospects. Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence, analyse implications for weapon systems and strategy, and discuss possible applications to arms control verification and modelling.

Decision-Making for Biomass-Based Production Chains: The Basic Concepts and Methodologies presents a comprehensive study of key-issues surrounding the integration of strategic, tactical and operational decision levels for supply chains in the biomass, biofuels and biorefining sectors. Comprehensive sections cover

biomass resources, harvesting, collection, storage and distribution systems, along with the necessary technical and technological background of production systems. In addition, the basics of decision-making, problems and decision levels encountered in design, management and operation phases are covered. Case studies are supplied in each chapter, along with a discussion and comparative analysis of topics. The book presents a clear vision of advances in the field. Graduate students and those starting in this line of research will also find the necessary information on how to model this kind of complex system. Finally, this comprehensive resource can be used as a guide for non-expert industry decision-makers and government policymakers who need a thorough overview on the industry. Examines analytic methodologies for complex decision-making when designing, deploying and managing biomass and bio-based products supply chains Includes real-life examples of main sustainability indicators, standards and certification schemes from the European Union, United States and worldwide Explores the progress of decision-making procedures to provide a detailed perspective for effective selection of the most reliable solutions for each kind of problem Provides detailed, in-depth analyses of various models and frameworks for their implementation, challenges and solutions Presents multi-criteria and multi-objective decision-making and modeling approaches, including mathematical modeling, simulation-based modeling, and artificial intelligence-based modeling

Electrical Submersible Pumps Manual: Design, Operations and Maintenance, Second Edition continues to deliver the information needed with updated developments, technology and operational case studies. New content on gas handlers, permanent magnet motors, and newly designed stage geometries are all included. Flowing from basic to intermediate to special applications, particularly for harsh environments, this reference also includes workshop materials and class-style examples for trainers to utilize for the newly hired production engineer. Other updates include novel pump stage designs, high-performance motors and temperature problems and solutions specific for high temperature wells. Effective and reliable when used properly, electrical submersible pumps (ESPs) can be expensive to purchase and maintain. Selecting the correct pump and operating it properly are essential for consistent flow from production wells. Despite this, there is not a dedicated go-to reference to train personnel and engineers. This book keeps engineers and managers involved in ESPs knowledgeable and up-to-date on this advantageous equipment utilized for the oil and gas industry. Includes

updates such as new classroom examples for training and more operational information, including production control Features a rewritten section on failures and troubleshooting Covers the latest equipment, developments and maintenance needed Serves as a useful daily reference for both practicing and newly hired engineers Explores basic electrical, hydraulics and motors, as well as more advanced equipment specific to special conditions such as production of deviated and high temperature wells

Stakeholders such as environmental directives and customer demands for reducing environmental impacts of a product require innovative and environmentally improved products. Therefore a systematic approach and effective methods and tools are needed in the early phase of product development. The basic elements for optimized process management in the design department are described in this book. The book provides twelve easy to follow steps for implementing ECODESIGN in a company. It gives clear advice how to integrate environmental considerations into product design and development, and combines ECODESIGN with Life Cycle Assessment and Environmental Communication. Chapters on Product modeling, Life Cycle Assessment, ECODESIGN tasks, Product Improvement and Environmental Communication use the previously developed ECODESIGN PILOT ([www.ecodesign.at/pilot](http://www.ecodesign.at/pilot)) and show its application to a real product example. The book comes with two web tools: one is the ECODESIGN PILOT, used to find measures to environmentally improve a product within a short time. The other is the ECODESIGN PILOT's Assistant ([www.ecodesign.at/assist](http://www.ecodesign.at/assist)): an expert system, which helps to find the right improvement strategy for a product. Audience: This book will be of interest to environmental and sustainability managers, engineers in research and product development, to designers, environmental experts, and consultants, as well as to students working in this field.

This book offers unique insights into elite Nigerian parents' engagement with, and use of, the international secondary education market as they attempt to retain their social standing - via their children - under today's shifting global conditions. Throughout, the book tackles two important, albeit uncomfortable questions: Why does whiteness hold the highest possible value in postcolonial societies such as Nigeria? And, more importantly, why do black people accept the hegemonic discourse that West/white is best? Combining the theoretical frameworks of Pierre Bourdieu and Frantz Fanon, the book reveals 'Whiteness' as a highly valuable form of cultural and symbolic capital that plays a crucial role in the formation of, and struggle for, elite status and distinction

in modern-day Nigeria. Drawing on rare qualitative data sets along with postcolonial literatures, the book reveals how British whiteness is used by those working at and for British private schools in Nigeria (BPS-NIG) as an informal but powerful mechanism of 'quality' control, and in constructing the image of 'world-class' educational establishments.
