the Cartesian product and study the chromatic number of some Cartesian products of signed graphs. The Cartesian product of two ordinary graphs G and H, noted G H, has been extensively studied. In 1957, Sabidussi [14] showed that $\chi(G \times H) = \max(\chi(G), \chi(H))$ where $\chi(G)$ is the chromatic number of the graph G. Another notable article on the

Cartesian Graph Paper With Numbers

A Cartesian coordinate system in two dimensions (also called a rectangular coordinate system or an orthogonal coordinate system) is defined by an ordered pair of perpendicular lines (axes), a single unit of length for both axes, and an orientation for each axis. The point where the axes meet is taken as the origin for both, thus turning each axis into a number line.
