Cary Umhau had everything she'd ever wanted -- beautiful children, a healthy bank account, even, she'd been told, a ticket to heaven. Yet something felt desperately wrong. Somewhere on the road to the American

Dream, her happy Christian life had become a fireproof fortress -- one that kept the world's pain at bay but left her all too safe from God's burning love. And she learned that he would do anything to break her out. Including -- it seemed -- breaking her. *Burning Down the Fireproof Hotel* is part memoir, part manifesto for the spacious life that's waiting for all of us beyond our private prisons.

Computer-aided synthesis of digital circuits from behavioral level specifications offers an effective means to deal with increasing complexity of digital hardware design. High Level Synthesis of ASICs Under Timing and Synchronization Constraints addresses both theoretical and practical aspects in the design of a high-level synthesis system that transforms a behavioral level description of hardware to a synchronous logic-level implementation consisting of logic gates and registers. High Level Synthesis of ASICs Under Timing and Synchronization Constraints addresses specific issues in applying high-level synthesis techniques to the design of ASICs. This complements previous results achieved in synthesis of general-purpose and signal processors, where data-path design is of utmost importance. In contrast, ASIC designs are often characterized by complex control schemes, to support communication and synchronization with the environment. The combined design of efficient data-path control-unit is the major contribution of this book. Three requirements are important in modeling ASIC designs: concurrency, external synchronization, and detailed timing constraints. The objective of the research work presented here is to develop a hardware model incorporating these requirements as well as synthesis algorithms that operate on this hardware model. The contributions of this book address both the theory and the implementation of algorithm for hardware synthesis.
