Full Steam Ahead Vol. 1 Copyright Office, Library of Congress

What is the state? The State of Freedom offers an important new take on this classic question by exploring what exactly the state did and how it worked. Patrick Joyce asks us to re-examine the ordinary things of the British state from dusty government files and post offices to well-thumbed primers in ancient Greek and Latin and the classrooms and dormitories of public schools and Oxbridge colleges. This is also a history of the 'who' and the 'where' of the state, of the

people who ran the state, the government offices they sat in and the college halls they dined in. Patrick Joyce argues that only by considering these things, people and places can we really understand the nature of the modern state. This is both a pioneering new approach to political history in which social and material factors are centre stage, and a highly original history of modern Britain.

The third edition of Donald H. Boalch's *Makers of the Harpsichord and Clavichord, 1440-1840* is a complete revision of the second edition published in 1974. The volume is now divided into two parts. Part I contains biographical details of all known makers, including some 500 not listed previously, and updated entries for more than 400 makers appearing in the second edition. Enlarged (and in some cases extended) descriptions of more than 2,000 surviving instruments by the makers are consigned to Part II, and the whole is complemented by a number of tables, a geographical and chronological conspectus of makers, and a new Index of Technical Terms in seven languages by Dr Andreas H. Roth.

## The Publishers' Circular and Booksellers' Record Routledge

This is an important contribution to the new urban history, describing and analysing one of the best examples of a company town in nineteenth-century Europe. This archetypal railway town was built on a green-field site by a railway company in 1842-3. It was a major junction, an administrative centre and an important manufacturing centre. Thus it provides an ideal arena in which to study the relationship between company and people and the effects of this claustrophobic association on emerging economic and social structure and politics in the era of large-scale development and modernisation in Europe and America. Dianne Drummond applies the full range of modern urban-historical approaches in this work. It is a shining example of the ways in which new techniques in research, analysis and comparison can redraw the best-known histories. It will be essential reading for urban historians.

Ever since its original publication in Germany in 1938, Max Schweidler's *Die Instandsetzung von Kupferstichen, Zeichnungen, Buchern usw.* has been recognized as a seminal modern text on the conservation and restoration of works on paper.

This volume, based on the authoritative revised German edition of 1950, makes Schweidler's work available in English for the first time, in a meticulously edited and annotated scholarly edition. An extensively illustrated appendix presents case studies of eleven Old Master prints that were treated using the techniques Schweidler discusses.

Field and Depot Maintenance Manual

This book examines how the 19th century's transport legacy of bicycles, trains, ocean-going steamers, trucks, trams, buses and cars arose, creating numerous new technologies and markets. Nothing like this range of transport changes had occurred before, and the 20th century changes were incremental compared with those of the 19th century. The book explores where the key transport features came from, and why there were so many inventions, innovations, and inconsistencies. The Industrial Revolution was a key part of the process as it had strong links with transport developments. This text adopts a broad, global perspective, but has a strong British orientation, as the Industrial Revolution was a process predominantly initiated and implemented in Britain. Nevertheless, when the Revolution lost momentum, Britain began to lose its leadership. By century's end, France and south-western Germany were dominant change-makers and the USA was appearing on the horizon. The book also highlights the many individual inventors and entrepreneurs who caused the dramatic transport changes, and notes that they did this predominantly through individual initiatives to satisfy personal, rather than corporate or national, goals and that they were often hindered, rather than aided, by officialdom.

An American Workhorse Inventor Jerome Increase Case founded Case in Racine in 1842 to build threshing machines. It was a humble beginning for a company that would eventually become the first builder of steam engines for agricultural use, and eventually emerge as the world's largest maker of steam engines. In 150 years of J.I. Case, farm equipment expert and historian C.H. Wendel chronicles all the developments, innovations, and history that have made the Case name a giant in the world of farming. With more than 2,000 story-telling photos and exhaustive research, Wendel covers every model ever produced by J.I. Case, over a 150-year period, from the earliest steam-powered vehicles to the new generation of multi-purpose wonders.
