This book serves as a guide to strategic management accounting. It introduces new and useful concepts on how to collect, analyse, and evaluate options to enable managers to steer corporate directions and write strategic plans for the long-term success of the corporation. Starting with basic techniques and the latest strategic management approaches, the book then presents cases that show the techniques employed step by step. By demonstrating how easily the ideas can be translated into action, it is a valuable resource for business practitioners, as well as for students taking advanced management accounting courses.

From an award-winning New York Times investigative reporter comes an outrageous story of greed, corruption, and conspiracy—which left the FBI and Justice Department counting on the cooperation of one man . . . It was one of the FBI's biggest secrets: a senior executive with America's most politically powerful corporation, Archer Daniels Midland, had become a confidential government witness, secretly recording a vast criminal conspiracy spanning five continents. Mark Whitacre, the promising golden boy of ADM, had put his career and family at risk to wear a wire and deceive his friends and colleagues. Using Whitacre and a small team of agents to tap into the secrets at ADM, the FBI discovered the company's scheme to steal millions of dollars from its own customers. But as the FBI and federal prosecutors closed in on ADM, using stakeouts, wiretaps, and secret recordings of illegal meetings around the world, they suddenly found that everything was not all that it appeared. At the same time Whitacre was cooperating with the Feds while playing the role of loyal company man, he had his own agenda he kept hidden from everyone around him—his wife, his lawyer, even the FBI agents who had come to trust him with the case they had put their careers on the line for. Whitacre became sucked into his own world of James Bond antics, imperiling the criminal case and creating a web of deceit that left the FBI and prosecutors uncertain where the lies stopped and the truth began. In this gripping account unfolds one of the most captivating and bizarre tales in the history of the FBI and corporate America. Meticulously researched and richly told by New York Times senior writer Kurt Eichenwald, *The Informant* re-creates the drama of the

story, beginning with the secret recordings, stakeouts, and interviews with suspects and witnesses to the power struggles within ADM and its board—including the high-profile chairman Dwayne Andreas, F. Ross Johnson, and Brian Mulroney—to the big-gun Washington lawyers hired by ADM and on up through the ranks of the Justice Department to FBI Director Louis Freeh and Attorney General Janet Reno. A page-turning real-life thriller that features deadpan FBI agents, crooked executives, idealistic lawyers, and shady witnesses with an addiction to intrigue, *The Informant* tells an important and compelling story of power and betrayal in America. *Military Construction Program* Trans Tech Publications Ltd

Collection of selected, peer reviewed papers from the 2014 4th International Conference on Materials, Mechatronics and Automation (ICMMA2014), April 10-11, 2014, Singapore. The 65 papers are grouped as follows: Chapter 1: Materials Science and Materials Processing Technology, Chapter 2: Applied Mechanics, Chapter 3: Design and Manufacturing, Chapter 4: Algorithms and Methodology of Research, Chapter 5: Mechanical Engineering and Controls, Chapter 6: Information Technology, Chapter 7: Management Application

Groundwater resources are facing increasing pressure from consuming and contaminating activities. There is a growing awareness that the quantitative and qualitative preservation of groundwater resources is a global need, not only to safeguard their future use for public supply and irrigation, but also to protect those ecosystems that depend partially or entirely on groundwater to maintain their species composition and natural ecological processes. Known as groundwater dependent ecosystems (GDEs), they have been a fast-growing field of research during the last two decades. This book is intended to provide a diverse overview of important studies on groundwater and ecosystems, including a toolbox for assessing the ecological water requirements for GDEs, and relevant case studies on groundwater/surface-water interactions, as well as the role of nutrients in groundwater for GDEs and ecosystem dependence (vegetation and cave fauna) on groundwater. Case studies are from Australia (nine studies) and Europe (12 studies from nine countries) as well as Argentina, Canada and South Africa. This book is of interest to everybody dealing with groundwater and its relationship with ecosystems. It is highly relevant for researchers, managers and decision-makers in the field of water and environment. It provides up-to-date information on crucial factors and parameters that need to be considered when studying groundwater-ecosystem relationships in different environments worldwide.
