It's not just smaller, lesser-known companies that have launched dud brands. On the contrary, most of the world's global giants have launched new products that have flopped - spectacularly and at great cost. Haig organizes these 100 "failures" into ten types which include classic failures (e.g., New Coke), idea failures (e.g., R.J.Reynolds' smokeless cigarettes), extension failures (e.g. Harley Davidson perfume), culture failures (e.g., Kellogs in India), and technology failures (e.g., Pets.com).

Great Tractors Giovanni Venturi

His assignment was to write about a real-estate frenzy lighting up the Redneck Riviera. So Ryan Dezember settled in and bought a home nearby himself. Then the market crashed, and he became one of the millions of

Americans who suddenly owed more on their homes than they were worth. A flood of foreclosures made it impossible to sell. It didn't help that his quaint neighborhood fell into disrepair and drug-induced despair. He had no choice but to become a reluctant and wildly unprofitable landlord to move on. Meanwhile, his reporting showed how the speculative mania that caused the crash opened the U.S. housing market to a much larger breed of investors. In this deeply personal story, Dezember shows how decisions on Wall Street and in Washington played out on his street in a corner of the Sunbelt that was convulsed by the foreclosure crisis. Readers will witness the housing market collapse from Dezember's perch as a newspaper reporter. First he's in the boom-to-bust South where a hot-air balloonist named Bob Shallow becomes one of the world's top selling real-estate agents arranging condo flips, developers flop in spectacular fashion and the law catches up with a beach-town mayor on the take. Later he's in New York, among financiers like Blackstone's Stephen Schwarzman who are building rental empires out of foreclosures, staking claim to the bastion of middle-class wealth: the single-family home. Through it all, Dezember is an underwater homeowner caught up in the mess. A cautionary tale of Wall Street's push to turn homes into assets, Underwater is a powerful, incisive story that chronicles the crash and its aftermath from a fresh perspective—the forgotten, middle-class homeowner.

The goals of this text are to develop the skills and an appreciation for the richness and versatility of modern time series analysis as a tool for analyzing dependent data. A useful feature of the presentation is the inclusion of nontrivial data sets illustrating the richness of potential applications to problems in the biological, physical, and social sciences as well as medicine. The text presents a balanced and comprehensive treatment of both time and frequency domain methods with an emphasis on data analysis. Numerous examples using data illustrate solutions to problems such as discovering natural and anthropogenic climate change, evaluating pain perception experiments using functional magnetic resonance imaging, and the analysis of economic and financial problems. The text can be used for a one semester/quarter introductory time series course where the prerequisites are an understanding of linear regression, basic calculus-based probability skills, and math skills at the high school level. All of the numerical examples use the R statistical package without assuming that the reader has previously used the software. Robert H. Shumway is Professor Emeritus of Statistics, University of California, Davis. He is a Fellow of the American Statistical Association and has won the American Statistical Association Award for Outstanding Statistical Application. He is the author of numerous texts and served on editorial boards such as the Journal of Forecasting and the Journal of the American Statistical Association. David S. NAMED A BEST BOOK OF THE YEAR BY BOOKPAGE AND LIBRARY JOURNAL The Crimson Petal and the White meets Fight Club: A page-turning novel set in the world of female pugilists and their patrons in late eighteenth-century England. Moving from a filthy brothel to a fine manor house, from the world of street fighters to the world of champions, The Fair Fight is a vivid, propulsive historical novel announcing the arrival of a dynamic new talent. Born in a brothel, Ruth doesn't expect much for herself beyond abuse. While her sister's beauty affords a certain degree of comfort, Ruth's harsh looks set her on a path of drudgery. That is until she meets pugilist patron George Dryer and discovers her true calling—fighting bare knuckles in the prize rings of Bristol. Manor-born Charlotte has a different cross to bear. Scarred by smallpox, stifled by her social and romantic options, and trapped in twisted power games with her wastrel brother, she is desperate for an escape. After a disastrous, life-changing fight sidelines Ruth, the two women meet, and it alters the perspectives of both of them. When Charlotte presents Ruth with an extraordinary proposition, Ruth pushes dainty Charlotte to enter the ring herself and learn the power of her own strength. A gripping, page-turning story about people struggling to transcend the circumstances into which they were born and fighting for their own places in society, The Fair Fight is a raucous, intoxicating tale of courage, reinvention, and fighting one's way to the top.

IBRO Handbook Series: Methods in the Neurosciences, Volume 9 General Editor: A. D. Smith  
Advanced Micropipette Techniques for Cell Physiology Kenneth T. Brown and Dale G. Flaming  
With this Handbook Series, IBRO aims to fill a major gap in the world literature. The neuroscientist needs to be able to turn to whichever specialized method is most suited to the problem he is currently studying. Methods in the Neurosciences will help to provide expert advice on exactly how to carry out the experiments, on what difficulties can occur and on the limitations of the method. Fine glass micropipettes are extensively used in intra and extra-cellular physiology as a means of recording electrical activity in cells and as a way of injecting a variety of substances for experimental purposes. For the last 12 years the authors of this book have treated micropipette techniques as a research field in itself, and here present for the first time their theory of how micropipette tips are formed, their methods of reducing tip size, and the implications of their work for research on small cells of all kinds, especially cells within the central nervous system. The book not only incorporates this new work but reviews and analyses existing publications on micropipette methodology, including patch-clamping, in order to present as complete an account as possible of how micropipettes can be used efficiently and effectively in a wide variety of experimental situations.

The first book to show how nationalism can help us to fight climate change. The climate emergency is intensifying, while international responses continue to falter. In *Climate Change and the Nation State*, Anatol Lieven outlines a revolutionary approach grounded in realist thinking: redefining climate change as an existential threat to nation states - which it undoubtedly is-and mobilizing both national security elites and mass nationalism. He reminds us that nationalism has proven to be the most powerful force in motivating people to care about the wellbeing of future generations. Throughout, Lieven draws on historical examples to show how earlier political movements marshaled nationalism to implement progressive social reform. In order to implement and maintain a

policy revolution such as "Green New Deal," he argues, it will be necessary to create dominant national consensuses like those that enabled and sustained the original New Deal and the advanced welfare states in Europe. Now updated in paperback, *Climate Change and the Nation State* is an essential contribution to the debate on how to deal with a climatic crisis that-if left unchecked-threatens the survival of every nation.
