150 Years of JI Case Kogan Page Publishers

An American Workhorse Inventor Jerome Increase Case founded Case in Racine in 1842 to build threshing machines. It was a humble beginning for a company that would eventually become the first builder of steam engines for agricultural use, and eventually emerge as the world's largest maker of steam engines. In 150 years of J.I. Case, farm equipment expert and historian C.H. Wendel chronicles all the developments, innovations, and history that have made the Case name a giant in the world of farming. With more than 2,000 story-telling photos and exhaustive research, Wendel covers every model ever produced by J.I. Case, over a 150-year period, from the earliest steam-powered vehicles to the new generation of multi-purpose wonders.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the in terest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the

suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

The goals of this text are to develop the skills and an appreciation for the richness and versatility of modern time series analysis as a tool for analyzing dependent data. A useful feature of the presentation is the inclusion of nontrivial data sets illustrating the richness of potential applications to problems in the biological, physical, and social sciences as well as medicine. The text presents a balanced and comprehensive treatment of both time and frequency domain methods with an

emphasis on data analysis. Numerous examples using data illustrate solutions to problems such as discovering natural and anthropogenic climate change, evaluating pain perception experiments using functional magnetic resonance imaging, and the analysis of economic and financial problems. The text can be used for a one semester/quarter introductory time series course where the prerequisites are an understanding of linear regression, basic calculus-based probability skills, and math skills at the high school level. All of the numerical examples use the R statistical package without assuming that the reader has previously used the software. Robert H. Shumway is Professor Emeritus of Statistics, University of California, Davis. He is a Fellow of the American Statistical Association and has won the American Statistical Association Award for Outstanding Statistical Application. He is the author of numerous texts and served on editorial boards such as the Journal of Forecasting and the Journal of the American Statistical Association. David S. Stoffer is Professor of Statistics, University of Pittsburgh. He is a Fellow of the American Statistical Association and has won the American Statistical Association Award for Outstanding Statistical Application. He is currently on the editorial boards of the Journal of Forecasting, the Annals of Statistical Mathematics, and the Journal of Time Series Analysis. He served as a Program Director in the Division of Mathematical Sciences at the National Science Foundation and as an Associate Editor for the Journal of the American Statistical Association and the Journal of Business & Economic Statistics.

NAMED A BEST BOOK OF THE YEAR BY BOOKPAGE AND LIBRARY JOURNAL The Crimson Petal and the White meets Fight Club: A page-turning novel set in the world of female pugilists and their patrons in late eighteenth-century England. Moving from a filthy brothel to a fine manor house, from the world of street fighters to the world of champions, The Fair Fight is a vivid, propulsive historical novel announcing the arrival of a dynamic new talent. Born in a brothel, Ruth doesn't expect much for herself beyond abuse. While her sister's beauty affords a certain degree of comfort, Ruth's harsh looks set her on a path of drudgery.

That is until she meets pugilist patron George Dryer and discovers her true calling—fighting bare knuckles in the prize rings of Bristol. Manor-born Charlotte has a different cross to bear. Scarred by smallpox, stifled by her social and romantic options, and trapped in twisted power games with her wastrel brother, she is desperate for an escape. After a disastrous, life-changing fight sidelines Ruth, the two women meet, and it alters the perspectives of both of them. When Charlotte presents Ruth with an extraordinary proposition, Ruth pushes dainty Charlotte to enter the ring herself and learn the power of her own strength. A gripping, page-turning story about people struggling to transcend the circumstances into which they were born and fighting for their own places in society, *The Fair Fight* is a raucous, intoxicating tale of courage, reinvention, and fighting one's way to the top.

The first book to show how nationalism can help us to fight climate change. The climate emergency is intensifying, while international responses continue to falter. In *Climate Change and the Nation State*, Anatol Lieven outlines a revolutionary approach grounded in realist thinking: redefining climate change as an existential threat to nation states - which it undoubtedly is-and mobilizing both national security elites and mass nationalism. He reminds us that nationalism has proven to be the most powerful force in motivating people to care about the wellbeing of future generations. Throughout, Lieven draws on historical examples to show how earlier political movements marshaled nationalism to implement progressive social reform. In order to implement and maintain a policy revolution such as "Green New Deal," he argues, it will be necessary to create dominant national consensus like those that enabled and sustained the original New Deal and the advanced welfare states in Europe. Now updated in paperback, *Climate Change and the Nation State* is an essential contribution to the debate on how to deal with a climatic crisis that-if left unchecked-threatens the survival of every nation.

It's not just smaller, lesser-known companies that have launched dud

brands. On the contrary, most of the world's global giants have launched new products that have flopped - spectacularly and at great cost. Haig organizes these 100 "failures" into ten types which include classic failures (e.g., New Coke), idea failures (e.g., R.J.Reynolds' smokeless cigarettes), extension failures (e.g. Harley Davidson perfume), culture failures (e.g., Kellogs in India), and technology failures (e.g., Pets.com).
