Multi-Criteria Decision Analysis CRC Press

Presented in an engaging and stimulating manner, *Case Study Analysis in the Classroom: Becoming a Reflective Teacher* provides beginning teachers a variety of typical classroom problems to analyze and solve. Solving the case study problems helps new teachers develop the knowledge bases they need to solve real problems in their own classrooms. More than a book of cases, it is an important starting point for students learning about case study research, especially the analysis of cases and their potential uses in the classroom. In addition, readers will also be guided through the process of reflective problem solving, developing an educational philosophy, and writing their own case studies.

Designing for Growth: A Design Thinking Tool Kit for Managers (D4G) showed how organizations can use design thinking to boost innovation and drive growth. This updated and expanded companion guide is a stand-alone project workbook that provides a step-by-step framework for applying the D4G tool kit and process to a particular project, systematically explaining how to address the four key questions of the design thinking approach. In the field book, Jeanne Liedtka, Tim Ogilvie, and Rachel Brozenske guide readers through the design process with reminders

of key D4G takeaways as they progress. Readers learn to identify an opportunity, draft a design brief, conduct research, establish design criteria, brainstorm, develop concepts, create napkin pitches, make prototypes, solicit feedback from stakeholders, and run learning launches. This second edition is suitable for projects in business, nonprofit, and government contexts, with all-new tools, practical advice, and facilitation tips. A new introduction discusses the relationship between strategy and design thinking.

Renault, Samsung, Lacoste This book provides opportunities to discover a selection of issues recently faced by 10 major French companies. Each case offers in a clear and structured manner: a case presentation sheet including the problem statement, learning objectives, as well as the main themes and marketing tools used throughout the case; a narrative reviewing important information about the company and its environment, leading to the problem to be investigated; a series of questions guiding the draft of a structured solution; a detailed solution outlining the main strategic recommendations. Based on real issues and written in collaboration with the companies, the 10 field-based case studies allow applying marketing principles, theories and models: segmentation, positioning,

marketing plan, as well as designing strategies at the product, price, place and promotion levels. Learning by doing, applied to marketing!"

In recent years, financial risk management has received increasing attention from managers in both private and public enterprises, regulatory agencies, and elected officials. The purpose of this research is to prepare a case study of a firm that seeks to provide a risk management solution for organizations. The case study resulted in a business plan, which was strategic in scope with a significant portion of the analysis concentrating on the firm's competitive positioning within the industry and an assessment of the direction the firm should move to achieve future success. This case study provides the sponsoring firm's management team with a comprehensive, realistic, and unbiased strategic analysis with several unique recommended courses of action for its future operating, management and financial decisions.

Managing and Using Information Systems SAGE Publications

In an embedded case study, the starting and end point is the comprehension of the case as a whole in its real-world context. However, in the course of analysis the case will be faceted either by different perspectives of inquiry or by several sub-units. The book presents different methodological approaches to organize this faceting process. It uses the power of the system approach in order to apply methods, which allow a scientific treatment of complex cases in a way that will be also acknowledged by the quantitative research community. The authors emphasize that a qualitative analysis starting from the real-world level is an indispensable part of case analysis. Thus the book bridges the gap between quantitative and qualitative approaches to complex problems when using the case study methodology.

Beyond the Worst-Case Analysis of Algorithms Hachette UK

Human health depends on the health of the planet. Earth's natural systems--the air, the water, the biodiversity, the climate--are our life support systems. Yet climate change, biodiversity loss, scarcity of land and freshwater, pollution and other threats are degrading these systems. The emerging field of planetary health aims to understand how these changes threaten our health and how to protect ourselves and the rest of the biosphere. Interdisciplinary in nature, Planetary Health explores how accelerating environmental change affects each dimension of human health. It then

turns to the rich terrain of solutions, reimagining our cities, our food systems, our energy sector, the chemicals we use, even our economics and our ethics. The result is a comprehensive and optimistic introduction to a field that is being adopted by researchers and universities around the world.

Case Studies and Best Practices from the Trenches

Decision analysis has become widely recognized as an important process for translating science into management

actions. With climate change and other systemic threats as driving forces in creating environmental and engineering problems, there is a great need for understanding decision making frameworks through a case-study based approach. Management of environmental and engineering projects is often complicated and multidisciplinary in scope and nature, thus issues that arise can be difficult to solve analytically. Multi-Criteria Decision Analysis: Case Studies in Engineering and the Environment provides detailed description of MCDA methods and tools and illustrates their applications through case studies focused on sustainability and system engineering applications. New in the Second Edition: Addresses current and emerging environmental and engineering problems. Includes seven new case studies to illustrate different management situations applicable at the international level. Builds on real case studies from recent and relevant environmental and engineering management experience. Describes advanced MCDA techniques and extensions used by practitioners. Provides corresponding decision models implemented using the DECERNS software package. Gives a more holistic approach to teaching MCDA methodology with a focus on sustainable solutions and adoption of new technologies, including nanotechnology and synthetic biology. Given the novelty and inherent applicability of this decision-making framework to the environmental and engineering fields, a greater number of teaching tools for this topic need to be made available. This book provides those teaching tools, covering the breadth of the applications of MCDA methodologies with clear explanations of the MCDA process. The

case studies are implemented in the DECERNS software package, allowing readers to experiment and explore and to understand the full process by which environmental managers assess these problems. This book is a great resource for professionals and students seeking to learn decision analysis techniques and apply similar frameworks to environmental and engineering projects. *Making Technology Investments Profitable* John Wiley & Sons

Cases in Sport Marketing, simulates real-life scenarios for sport marketers as exhibition games in the preseason simulate the regular season for professional athletes. The text begins with four introductory chapters to explain the case study method and then dedicates the remaining fifteen chapters to fifteen sport marketing cases that cover a wide range of issues and sport industry segments. By working through the cases, students can examine an array of situations and gain experience grappling with actual problems faced by managers. Each case presents the critical issues at hand, possible alternatives for consideration, and the criterion necessary to make an informed decision. The final chapter provides an overview of the sport marketing field.

Learning to Solve Problems is a much-needed book that describes models for designing interactive learning environments to support how to learn and solve different kinds of

problems. Using a research-based approach, author David H. Jonassen, a recognized expert in the field, shows how to design instruction to support three kinds of problems: story problems, troubleshooting, and case and policy analysis problems. Filled with models and job aids, this book describes different approaches for representing problems to learners and includes information about technology-based tools that can help learners mentally represent problems for themselves. Jonassen also explores methods for associating different solutions to problems and discusses various processes for reflecting on the problem solving process. Learning to Solve Problems also includes three methods for assessing problem-solving skills: performance assessment, component skills; and argumentation.

Qualitative Comparative Analysis in Mixed Methods Research and Evaluation provides a user-friendly introduction for using Qualitative Comparative Analysis (QCA) as part of a mixed methods approach to research and evaluation. Offering practical, in-depth, and applied guidance for this unique analytic technique that is not provided in any current mixed methods textbook, the chapters of this guide skillfully build upon one another to walk researchers through the steps of QCA in logical order. To enhance and further reinforce learning, authors Leila C. Kahwati and Heather L. Kane provide supportive learning objectives, summaries, and exercises, as well as author-created datasets for use in R via the companion site. Qualitative Comparative Analysis in Mixed Methods Research and Evaluation is Volume 6 in SAGE's Mixed Methods Research Series.
