This user-friendly guide will help the clinician develop Cognitive-Behavioral treatment plans for 11 common psychological disorders (e.g., major depressive disorder, generalized anxiety, borderline personality disorder, anger problems). Based on a problem-solving model and empirical literature, the authors focus on two major clinical tasks involved in this process: case formulation and treatment design. They delineate short-term goals, long-term goals, treatment targets, and potential interventions. Appendices include "quick guides to CBT treatment planning" for the 11 disorders and selected major CBT clinical intervention strategies noted throughout the book.

Bálint's syndrome is named after the Hungarian physician who first reported a remarkable case of a man with complex visuospatial deficits following bilateral lesions within parietal and occipital cortex (Bálint, 1909). The syndrome has three primary symptoms: simultanagnosia (impaired spatial awareness of more than one object at time), optic ataxia (misreaching to visual targets) and ocular apraxia (described by Bálint as "psychic paralysis of gaze"). Balint's patients not only cannot perceive more than one object at time and therefore show poor comprehension of multi-object visual scenes i.e. poor detection of all the objects present and difficulty in grasping the relationship between them; in addition they typically fail to reach towards location of the single object, which they can perceive. The deficit of the allocation of spatial attention in Balint's syndrome has been linked to a problem in feature binding which results in illusory conjunctions. Patients with Balint's syndrome also show deficits in global processing i.e. when integration of multiple local elements into global compound shapes is required. Consequently, Balint's syndrome provides a unique opportunity to study the nature and neuroanatomy of human visuospatial processing, in particular multi-

level object representation, spatial awareness and the distribution of visual attention. The studies collected here cover both the anatomical and the cognitive mechanisms of the different symptoms associated with the syndrome. Furthermore, the dissociations between the components of Bálint's syndrome, in particular simultanagnosia and optic ataxia, can also co-occur with visual neglect and extinction and the different combinations of reported lesions raises a question about the status of the syndrome and whether it should be merely treated as a historical compilation of symptoms which may or may not coexist cohesively. This interesting argument is raised here.

The truck's role in American society changed dramatically from the 1960s through the 1980s, with the rise of off-roaders, the van craze of the 1970s and minivan revolution of the 1980s, the popularization of the SUV as family car and the diversification of the pickup truck into multiple forms and sizes. This comprehensive reference book follows the form of the author's popular volumes on American cars. For each year, it provides an industry overview and, for each manufacturer, an update on new models and other news, followed by a wealth of data: available powertrains, popular options, paint colors and more. Finally, each truck is

detailed fully with specifications and measurements, prices, production figures, standard equipment and more.
