Written by case managers for case managers, this reference manual for nurses and other health professionals presents a CMSA tested approach towards systematically integrating physical and mental health case management principles and assessment tools. Since the health care field has undergone major changes such as the passing of the Patient Protection and Affordable Care Act, Mental Health Parity, Transition of Care & Chronic Care Management and the Medicare Act and CHIP Authorization Act (MACRA), health care workers must competently know how to integrate those new regulations, describe alternative payment options, and implement requirements for greater patient and family assessment, care planning, and care coordination in their practice. CMSA's Integrated Case Management delves into the role of the case manager and unpacks how case managers assess and treat complex patients. These are patients who may be challenged with medical and behavioral conditions, poor access to care services, as well as chronic illnesses and disabilities, and require multidisciplinary care to regain health and function. With a wealth of information on regulatory requirements, new models of care, integration of services, digital and telemedicine, and new performance measures that are clearly defined for nurses in nursing terminology, chapters outline the steps needed to begin, implement, and use the interventions of the Integrated Case Management approach. All content aligns with the newly revised 2017 Model Care Act, CMSA Standards of Practice 2016 as well as the CMSA Core Curriculum for Case Management Third Edition.

The book begins with early ideas about astronauts in science fiction and film portrayals of the role. It goes on to cover recruitment and the application process to become an astronaut with NASA and ESA, and the qualifications and fitness required for various astronaut roles. The reader is taken through training for different types of astronaut roles (pilot, scientist, payload specialist, space walker, Moon walker, etc) and the different types of missions are described (sub-orbital, Earth orbit, living aboard the International Space Station (ISS), lunar flight and landing, driving on the Moon, and planned future missions to asteroids and Mars). The equipment used by astronauts is documented, including clothing, space suits, tools, backpacks, zero-gravity toilets, food stations, etc. The experience of space flight on typical missions is outlined, illustrated by the accounts of real astronauts on actual flights – the experience of launch, first reactions to Zero-G, exiting the hatch for a spacewalk, the views of Earth, walking on the Moon, and re-entering the Earth's atmosphere. The book is written in a style accessible to the layperson, while including sufficient technical details to satisfy more knowledgeable readers. It also captures the excitement and wonder of spaceflight, making extensive use of astronaut biographies and interviews to uncover the real human experience, as much as technical information to provide detail to satisfy those curious about 'how it works'.

The saxophone is arguably the most iconic of all instruments, but with its graceful form and soulful tone it's easy to forget that it's still a machine. It's a complicated machine, too, and even a slight fault in the mechanism can affect the way it feels and plays. This innovative manual explains clearly and simply how the mechanism functions and what can be done to maintain it, as well as to improve its performance with professional set-up techniques, with few or no specialist tools. This manual is essential reading for everyone who plays the saxophone.

Routledge Handbook of Tourism and Sustainability from C. Michael Hall, Stefan Gössling, Daniel Scott is one of the winners of the ITB BookAwards 2016 in the category Specialist tourism literature! Sustainability remains one of the major issues in tourism today. Concerns over climate and environmental change, the fallout from the global economic and financial crisis, and the seeming failure to meeting UN Millennium development goals have only reinforced the need for more sustainable approaches to tourism, however they be defined. Given the centrality of sustainability in tourism curricula, policies, research and practice it is therefore appropriate to prepare a state of the art handbook on the relationship between tourism and sustainability. This timely Handbook of Tourism and Sustainability is developed from specifically commissioned original contributions from recognised authors in the field, providing a systematic guide to the current state of knowledge on this area. It is interdisciplinary in coverage and international in scope through its authorship and content. The volume commences with an assessment of tourism's global environmental, e.g. climate, emissions, energy use, biodiversity, water use, land use, and socio-economic effects, e.g. economic impacts, employment and livelihoods, culture. This then provides the context for sections outlining the main theoretical frameworks and constructs that inform tourism and sustainability, management tools and approaches, and the approaches used in different tourism and travel industry sectors. The book concludes by examining emerging and future concerns in tourism and sustainability such as peak-oil, post-carbon tourism, green economy and transition tourism. This is essential reading for students, researchers and academics interested in the possibilities of sustainable forms of tourism and tourism's contribution to sustainable development. Its assessment of tourism's global impact along with its overviews of sectoral and management approaches will provide a benchmark by which the sustainability of tourism will be measured for years to come.

Tallinn Manual 2.0 expands on the highly influential first edition by extending its coverage of the international law governing cyber operations to peacetime legal regimes. The product of a three-year follow-on project by a new group of twenty renowned international law experts, it addresses such topics as sovereignty, state responsibility, human rights, and the law of air, space, and the sea. Tallinn Manual 2.0 identifies 154 'black letter' rules governing cyber operations and provides extensive commentary on each rule. Although Tallinn Manual 2.0 represents the views of the experts in their personal capacity, the project benefitted from the unofficial input of many states and over fifty peer reviewers.

"This fiction book begins as eight frustrated midlife women—from all walks of life—meet Dr. Kailey Madrona, a woman specialist. All are in perimenopause, the long and chaotic transition to menopause. They are as different as women can be—yet they share the mysterious experiences of perimenopause, night sweats, flooding periods or mood swings. We follow these women as they consult Dr. Madrona, learn the surprising hormonal changes explaining their symptoms, get better or worse, and try or refuse therapies. As each woman lives through her particular challenge, we begin to see how we, too, can survive perimenopause! Dr. Jerilynn Prior tells the story of women in perimenopause through a unique blend of storytelling and scientific fact."--

The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and

very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Now with a new introduction for the Tor Essentials line, *A Fire Upon the Deep* is sure to bring a new generation of SF fans to Vinge's award-winning works. A Hugo Award-winning Novel! "Vinge is one of the best visionary writers of SF today."-David Brin
Thousands of years in the future, humanity is no longer alone in a universe where a mind's potential is determined by its location in space, from superintelligent entities in the Transcend, to the limited minds of the Unthinking Depths, where only simple creatures, and technology, can function. Nobody knows what strange force partitioned space into these "regions of thought," but when the warring Straumli realm use an ancient Transcendent artifact as a weapon, they unwittingly unleash an awesome power that destroys thousands of worlds and enslaves all natural and artificial intelligence. Fleeing this galactic threat, Ravna crash lands on a strange world with a ship-hold full of cryogenically frozen children, the only survivors from a destroyed space-lab. They are taken captive by the Tines, an alien race with a harsh medieval culture, and used as pawns in a ruthless power struggle. Tor books by Vernor Vinge
