Artifact Case Studies Human Kinetics This book offers a highly revealing and troubling view of today's high school students and the ways they pursue high grades and success. Denise Pope, veteran teacher and curriculum expert, follows five motivated and successful students through a school year, closely shadowing them and engaging them in lengthy reflections on their school experiences. What emerges is a double-sided picture of school success. On the one hand, these students work hard in school, participate in extracurricular activities, serve their communities, earn awards and honours, and appear to uphold school values. But on the other hand, they feel that in order to get ahead they must compromise their values and manipulate the system by scheming, lying, and cheating. In short, they do school, that is, they are not really engaged with learning nor can they commit to such values as integrity and community. The words and actions of these five students - two boys and three girls from diverse ethnic and socioeconomic backgrounds - underscore the frustrations of being caught in a grade trap that pins future success to high grades and test scores. Their stories raise critical questions that are too important for parents, educators, and community leaders to ignore. Are schools cultivating an environment that promotes intellectual curiosity, cooperation, and integrity? Or are they fostering anxiety, deception, and hostility? Do today's schools inadvertently impede the very values they claim to embrace? Is the success that current assessment

Thanks to remarkable methodological and statistical advances in recent years, Single-Case design (SCD) research has become a viable and often essential option for researchers in applied psychology, education, and related fields. This text is a compendium of information and tools for researchers considering SCD research, a methodology in which one or several participants (or other units) comprise a systematically-controlled experimental intervention study. SCD is a highly flexible method of conducting applied intervention research where it is not feasible or practical to collect data from traditional groups of participants. Initial chapters lay out the key components of SCDs, from articulating dependent variables to documenting methods for achieving experimental control and selecting an appropriate design model. Subsequent chapters show when and how to implement SCDs in a variety of contexts and how to analyze and interpret results. Authors emphasize key design and analysis tactics, such as randomization, to help enhance the internal validity and scientific credibility of individual studies. This rich resource also includes in-depth descriptions of large-scale SCD research projects being undertaken at key institutions; practical suggestions from journal editors on how to get SCD research published; and detailed instructions for free, user-friendly, web-based randomization software.

Case Studies on Diversity and Social Justice Education offers pre- and in-service educators an opportunity to analyze and reflect upon a variety of realistic case studies related to educational equity and social justice. Each case, written in an engaging, narrative style, presents a complex but common classroom scenario in which an inequity or injustice is in play. These cases allow educators to practice the process of considering a range of contextual factors, checking their own biases, and making immediate- and longer-term decisions about how to create and sustain equitable learning environments for all students. The book begins with a seven-point process for examining case studies. Largely lacking from existing case study collections, this framework guides readers through the process of identifying, examining, reflecting on, and taking concrete steps to resolve challenges related to diversity and equity in schools. The cases themselves present everyday examples of the ways in which racism, sexism, homophobia and heterosexism, class inequities, language bias, religious-based oppression, and other equity and diversity concerns affect students, teachers, families, and other members of our school communities. They involve classroom issues that are relevant to all grade levels and all content areas, allowing significant flexibility in how and with whom they are used. Although organized topically, the intersection of these issues are stressed throughout the cases, reflecting the multi-faceted way they play out in real life. All cases conclude with a series of questions to guide discussion and a section of facilitator notes, called points for consideration. This unique feature provides valuable insight for understanding the complexities of each case.

Deciding whether to grant test accommodations for a student with disabilities is challenging and controversial. Current accommodations practice is seldom research based, and professionals charged with such decisions often reach different conclusions. The result can be either unnecessary accommodations that compromise test validity or the denial of accommodations to a student who needs them. In this book, Benjamin Lovett and Lawrence Lewandowski draw on research to offer clear, specific guidelines for deciding when accommodations are appropriate for a student with disabilities -- depending on the test being taken, the accommodations being considered, and the student's functional skills. The book also explains how laws and practices differ for K-12 accommodations versus postsecondary education and workplace accommodations, as well as how universal test design might lessen the need for test accommodations.

This book integrates ideas from many theoretical perspectives into a set of principles and concrete strategies that psychology as a whole can offer you. See for Yourself exercises will help you discover more about yourself as a thinker and learner and also help you come to a deeper and more personal understanding of educational psychology's core ideas.
