Case Studies on Diversity and Social Justice

Education offers pre- and in-service educators an opportunity to analyze and reflect upon a variety of realistic case studies related to educational equity and social justice. Each case, written in an engaging, narrative style, presents a complex but common classroom scenario in which an inequity or injustice is in play. These cases allow educators to practice the process of considering a range of contextual factors, checking their own biases, and making immediate- and longer-term decisions about how to create and sustain equitable learning environments for all students. The book begins with a seven-point process for examining case studies. Largely lacking from existing case study collections, this framework guides readers through the process of identifying, examining, reflecting on, and taking concrete steps to resolve challenges related to diversity and equity in schools. The cases themselves present everyday examples of the ways

in which racism, sexism, homophobia and heterosexism, class inequities, language bias, religious-based oppression, and other equity and diversity concerns affect students, teachers, families, and other members of our school communities. They involve classroom issues that are relevant to all grade levels and all content areas, allowing significant flexibility in how and with whom they are used. Although organized topically, the intersection of these issues are stressed throughout the cases, reflecting the multi-faceted way they play out in real life. All cases conclude with a series of questions to guide discussion and a section of facilitator notes, called points for consideration. This unique feature provides valuable insight for understanding the complexities of each case.

Educational Psychology: Developing Learners Value Package (Includes Case Studies: Applying Educational Psychology) Prentice Hall

Case Studies in School Psychology is the first textbook to comprehensively introduce the NASP

Practice Model through active discussion of real-life, Bacon

school-based examples of issues facing school psychologists. Incorporating all 10 domains of practice, these true-to-life scenarios span individual child, class-wide, school-wide, and district/community-wide organizational levels across multiple age and developmental ranges. Graduate students will better understand their expansive roles and potential avenues to make positive impacts as school psychologists in children's academic, social, emotional, and behavioral development.

This widely used book is known for its exceptionally clear and engaging writing, in-depth focus on learning, and extensive concrete applications. It concentrates on core concepts and principles, and gives users an in-depth understanding of the central ideas of educational psychology. Up-to-date information includes discussions on critical thinking, apprenticeships, guided

participation, setting events, behavioral momentum, positive behavioral support, direct instruction, self-regulated learning, and lesson plans. Six chapters on learning offer a large amount of material to help readers and students examine their own learning and understand how they learn—and then shows them how to apply these concepts as teachers. For individuals interested in a teaching career or the field of educational psychology.

This highly respected, market-leading textbook on learning theories applied to education prepares pre-service teachers and other educators with a unique and meaningful learning experience. The sixth

edition of *Human Learning* covers a broad-range of learning theories and key perspectives on learning related to education, including: behaviorist, cognitive, social cognitive, contextual, and developmental theories, always highlighting relationships between concepts.

Additionally, the text details associationistic processes (e.g., classical and instrumental conditioning), and more complex and distinctly human processes (e.g. metacognition, self-regulated learning, critical thinking). Every chapter features key pedagogical concepts with specific applications to classroom practice, numerous concrete examples that illustrate key concepts, principles, and recommendations and dozens of proven examples help make the fundamentals of

these theories comprehensible to students with little or no prior coursework in psychology. Significant updates to this textbook include: important updates to reflect the most current research and new theories in the field, expansion of the chapter on cognition and memory, re-organization of Piaget and Vygotsky content into two separate chapters, a core section on teaching critical thinking skills, and the discussion of technology-based instruction has been significantly revised and expanded in this edition.

Thanks to remarkable methodological and statistical advances in recent years, Single-Case design (SCD) research has become a viable and often essential option for researchers in applied psychology,

education, and related fields. This text is a compendium of information and tools for researchers considering SCD research, a methodology in which one or several participants (or other units) comprise a systematically-controlled experimental intervention study. SCD is a highly flexible method of conducting applied intervention research where it is not feasible or practical to collect data from traditional groups of participants. Initial chapters lay out the key components of SCDs, from articulating dependent variables to documenting methods for achieving experimental control and selecting an appropriate design model. Subsequent chapters show when and how to implement SCDs in a variety of contexts and how to analyze and interpret results. Authors emphasize key design and

analysis tactics, such as randomization, to help enhance the internal validity and scientific credibility of individual studies. This rich resource also includes in-depth descriptions of large-scale SCD research projects being undertaken at key institutions; practical suggestions from journal editors on how to get SCD research published; and detailed instructions for free, user-friendly, web-based randomization software.

This book documents systematic, prodigious and multidisciplinary research in the nature and role of academic self-efficacy, and identifies areas for future research directions within the three sections of the book:

'Assessment and Measurement of Academic Self-efficacy', 'Empirical Studies on What Shapes Academic Self-efficacy', and 'Empirical

Studies on Influence of Academic Self-efficacy'. The book presents works by educators and researchers in the field from various parts of the world, highlighting advances, creative and unique approaches, and innovative methods. It examines discussions around the theoretical and practical aspects of academic self-efficacy in culturally and linguistically-diverse educational contexts. This book also showcases work based on classical and modern test theory methods, mediation and moderation analysis, multi-level modelling approaches, and qualitative analyses.

In an embedded case study, the starting and end point is the comprehension of the case as a whole in its real-world context. This book bridges the gap between quantitative and qualitative approaches to complex problems when

using this methodology.

An engaging and conversational book about the basics of human thought and memory processes from a cognitive psychology perspective. While covering the fundamentals of how our brains think, learn, and remember, Our Minds, Our Memories also entertains the reader with a bright tone, engaging exercises, and thought-provoking examples. A textbook that doesn't look or read like a textbook, this new first edition teaches students and non-students alike about thought and memory from the perspective of cognitive psychology, information processing, and constructivism. Utilizing up-to-date educational psychology research, helpful visuals, and a conversational tone, Our Minds, Our Memories covers common misconceptions about learning and memory, reviews the basic anatomy of the

brain and the human memory system, and explains why we forget much of what we experience. The book also helps readers acquire effective learning strategies and study habits for their own lives by exploring the subjects of critical thinking, mnemonics, metacognition, and problem solving. In order to help further their understanding of the material, each chapter includes exercises through which readers can see various aspects of cognition in their own thinking and learning.

Reflecting recent knowledge and developments in the field, this very practical, easy-to-use guide emphasizes learning how to do case study research—from the first step of deciding whether a case study is the way to go to the last step of verifying and confirming

findings before disseminating them. The authors show students how to determine an appropriate research design, conduct informative interviews, record observations, document analyses, delineate ways to confirm case study findings, describe methods for deriving meaning from data, and communicate their findings. Featuring many new examples, the Third Edition offers step-by-step guidance to help beginning researchers through the stages of planning and implementing a thesis, dissertation, or independent project. This succinct “how-to” guide is an excellent place for anyone to begin doing case study research. Book Features: Straightforward introduction to the science of doing case study research. A step-by-step approach that speaks directly to the novice

investigator. Many concrete examples to illustrate key concepts. Questions, illustrations, and activities to reinforce what has been learned.

Parenting Matters Pearson Higher Ed

This monograph analyses and describes successful educational actions with a specific focus on vulnerable groups (i.e. youth, migrants, cultural groups e.g. Roma, women, and people with disabilities).

Concrete data that shows success in school performance in subject matters such as math or language will be provided, as well as children, teachers and families accounts of the impact of this success.

Alongside, there is an analysis of the relationship between these children's educational performance with their inclusion or exclusion from different areas

of society (i.e. housing, health, employment, and social and political participation). Many studies have already diagnosed and described the causes of educational and social exclusion of these vulnerable groups. This monograph, however, provides solutions, that is, actions for success identified through the INCLUD-ED project, thus providing both, contrasted data and solid theoretical background and development. Some examples of these actions are interactive groups (or heterogeneous grouping in the classroom with reorganisation of human resources), extension of the learning time, homework clubs, tutored libraries, family and community educative participation, family education, or dialogic literary gatherings. All these actions have been defined as

successful educational actions, which mean that they lead to both efficiency and equity. Finally, recommendations for policy and practice are included and discussed.

This case study book serves as a valuable tool for professors and instructors of educational psychology. It contains 17 cases that represent current areas of interest in Educational Psychology embedded within current challenges that teachers face in today's middle and high school classrooms. The cases are organized into six major parts: Human Development, Individual Differences and Diversity, Learning Theories, Motivation, Classroom Management, Instructional Approaches, and Assessment and Evaluation. Each case describes a detailed teaching scenario written from either the student or the teachers' perspective. To engage students in critical thinking,

perspective-taking, analysis, problem solving and decision-making, the cases have been intentionally written without a conclusion. Because the cases are open-ended, it allows the professor or instructor more flexibility and autonomy in how they use the cases. Each case is followed by thought-provoking questions, highlighting the significant issues in the case, from which to analyze the case and apply various theoretical viewpoints. While the cases do not replace actual classroom experience, they present a way to immerse students in the classroom's culture by providing them with real-life teaching examples.

Essentials of Educational Psychology

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes

all primary caregivers are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young

children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Cases of Teachers' Data Use

addresses applications of student data beyond theoretical, school-, and district-

level examinations by presenting case studies of teachers' data use in practice. Within the context of data-driven education reform policies, the authors examine the effective and ineffective ways that teachers make use of student data in instruction, evaluation, and planning. Promising practices, based on the empirical research presented, offer strategies and routines for sound data use that can be applied in schools. Chapters written by scholars from diverse methodological perspectives offer readers multiple lenses to use in considering issues of data use such that current theoretical assumptions may be challenged and the field advanced. This uniquely focused

yet comprehensive work is an indispensable resource for researchers and students interested in classroom assessment and for professionals looking to support teachers' use of student performance data for adaptive instruction.

Doing Case Study Research Pearson Now with SAGE Publications, Cheryl Cisero Durwin and Marla Reese-Weber's EdPsych Modules uses an innovative implementation of case studies and a modular format to address the challenge of effectively connecting theory and research to practice. Each module is a succinct, stand-alone topic that represents every subject found in traditional chapter texts

and can be used in any order for maximum flexibility in organizing your course. Each of the book's eight units of modules begins with a set of four case studies—early childhood, elementary, middle school, and secondary—and ends with “Assess” and “Reflect and Evaluate” questions and activities to encourage comprehension and application of the research and theories presented. The case approach and the extensive pedagogy that support it allows students to constantly see the applications of the theories and research that they are studying in the text.

Educational Psychology + Case Studies
John Wiley & Sons

This book offers a highly revealing and troubling view of today's high school students and the ways they pursue high grades and success. Denise Pope, veteran teacher and curriculum expert, follows five motivated and successful students through a school year, closely shadowing them and engaging them in lengthy reflections on their school experiences. What emerges is a double-sided picture of school success. On the one hand, these students work hard in school, participate in extracurricular activities, serve their communities, earn awards and honours, and appear to uphold school values. But on the other hand, they feel that in order to get ahead they must compromise their values and manipulate the system by scheming, lying, and cheating. In short, they do school, that is, they are not really engaged with learning nor can they commit to such values as integrity and community. The words and actions of these five students - two boys and three girls from diverse ethnic and socioeconomic backgrounds - underscore the frustrations of being caught in a grade trap that pins future success to high grades and test scores. Their stories raise critical questions that are too important for parents, educators, and community leaders to ignore. Are schools cultivating an environment that promotes intellectual curiosity, cooperation, and integrity? Or are they fostering anxiety, deception, and hostility? Do today's schools inadvertently impede the very values they claim to embrace? Is the success that current assessment practices measure the kind of

success we want for our children?

In 2014 the Children and Families Act extended the protection of educational services to include people up to age 25, so since then educational psychologists have worked in post-16 establishments as well as schools. This book presents case studies that illuminate how psychology is applied to enhancing the lives of adolescents and young adults as they grapple with, for example, the ethics of consent, and the management of transitions to adulthood and independent living. It gives a voice to vulnerable students whose aspirations and hopes differ entirely from those of

younger children. Commissioned and compiled by members of the British Psychological Society's Division of Educational and Child Psychology, this timely collection is invaluable for educational psychologists and will interest parents, young people, social workers, teachers, lecturers and administrators in further and higher education.
